

Useful things. Finished workflows. A neighborly place.

GiveToGive - published-site visual and capability guide

Captured from <https://givetogive.vercel.app> on 2026-09-26T22:41:46.226Z

62 browser views: public pages, signed-in experiences, open dialogs, recovery states, and mobile layouts.

Alex Rivera, Jamie Brooks, and the illustrated Asks were temporary synthetic demonstration records captured on the published site. No real payment was made. All demonstration database records were removed after capture.

Money Asks record pledges only. This release does not process payments, run pooled funds, or sell subscriptions.

The capability appendix distinguishes existed before, partly implemented before, brand new, and newly finished against main at 1ecb2ee.

A NEIGHBORHOOD HELP EXCHANGE

Useful things
belong in
motion.

GiveToGive makes room for the small, specific help that keeps a neighborhood generous: an hour, a ride, a spare item, a skilled hand, or a few dollars toward a shared need.

See what neighbors need

Make a free account

THERE IS MORE THAN ONE WAY TO SHOW UP

01

02

03

Help can have any shape.

GIVETO GIVE / PUBLISHED SITE WALKTHROUGH

2

02 / Home - ways to help

Time, items, resources, and money pledges lead into filtered views of the community board.

[Browse asks](#) [Sign in](#) [Join in](#)

01

Time & tasks

Dog walks, repairs, pickups, lessons, and the work that takes a neighbor.

02

Items & resources

Tools, books, spare furniture, community space, and the things already nearby.

03

Money pledges

Offer an amount toward a specific need. Members arrange payment directly; no money moves through this site.

KEEP THE GOOD GOING

A better block starts with a visible ask.

14

14 / Account - sign in

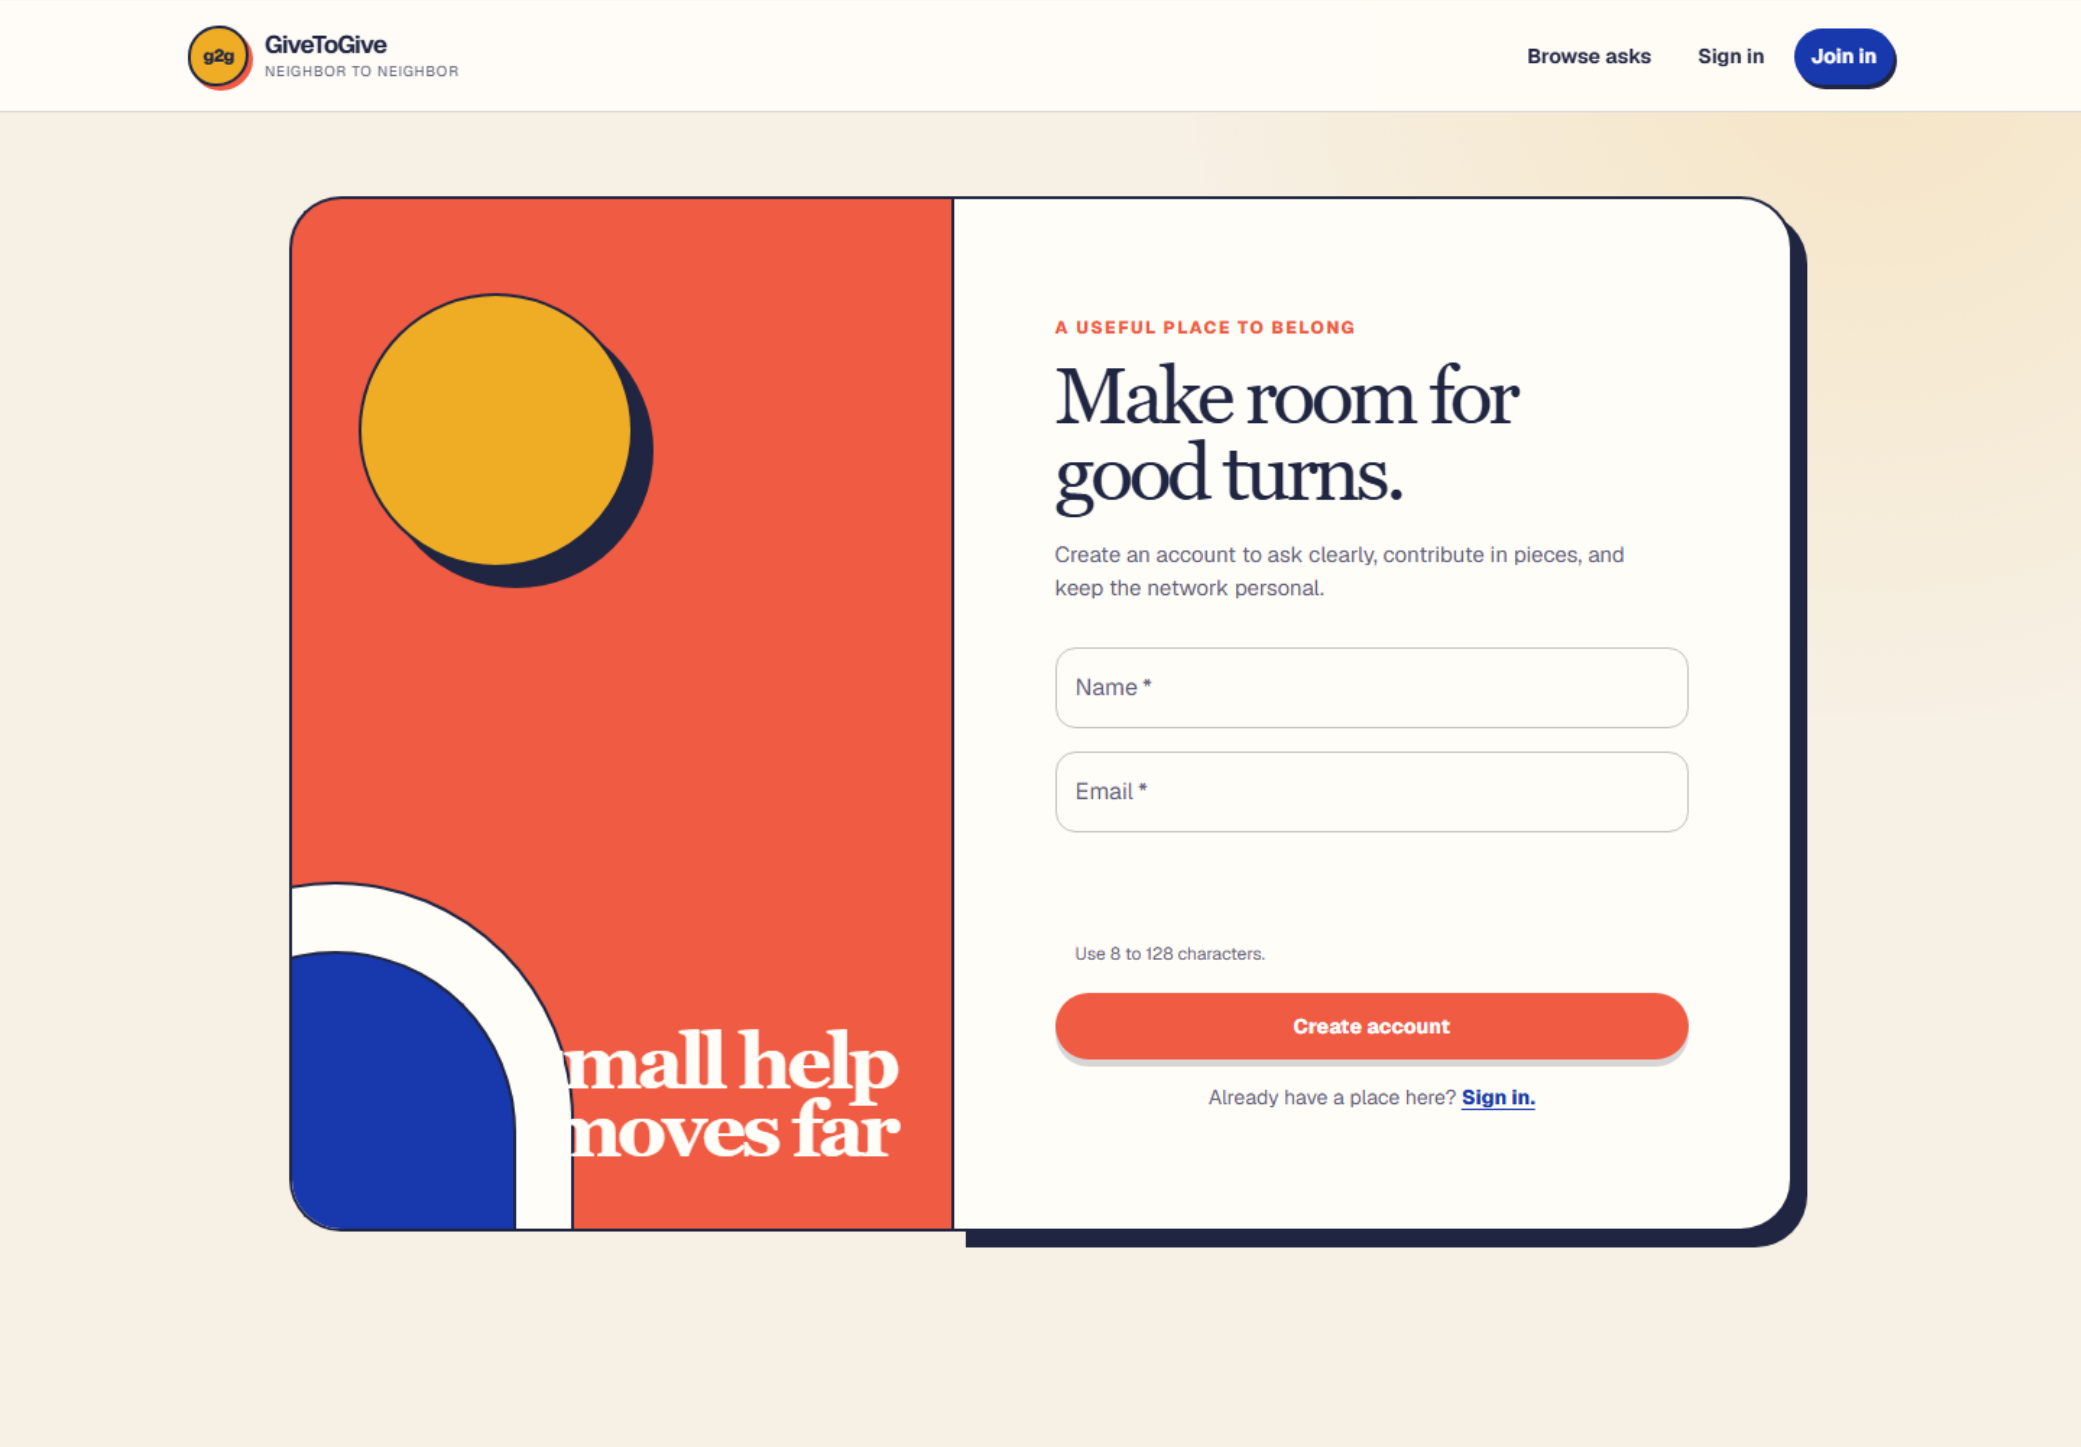

Email/password and Discord are the available sign-in options.

/signin

15 / Account - join

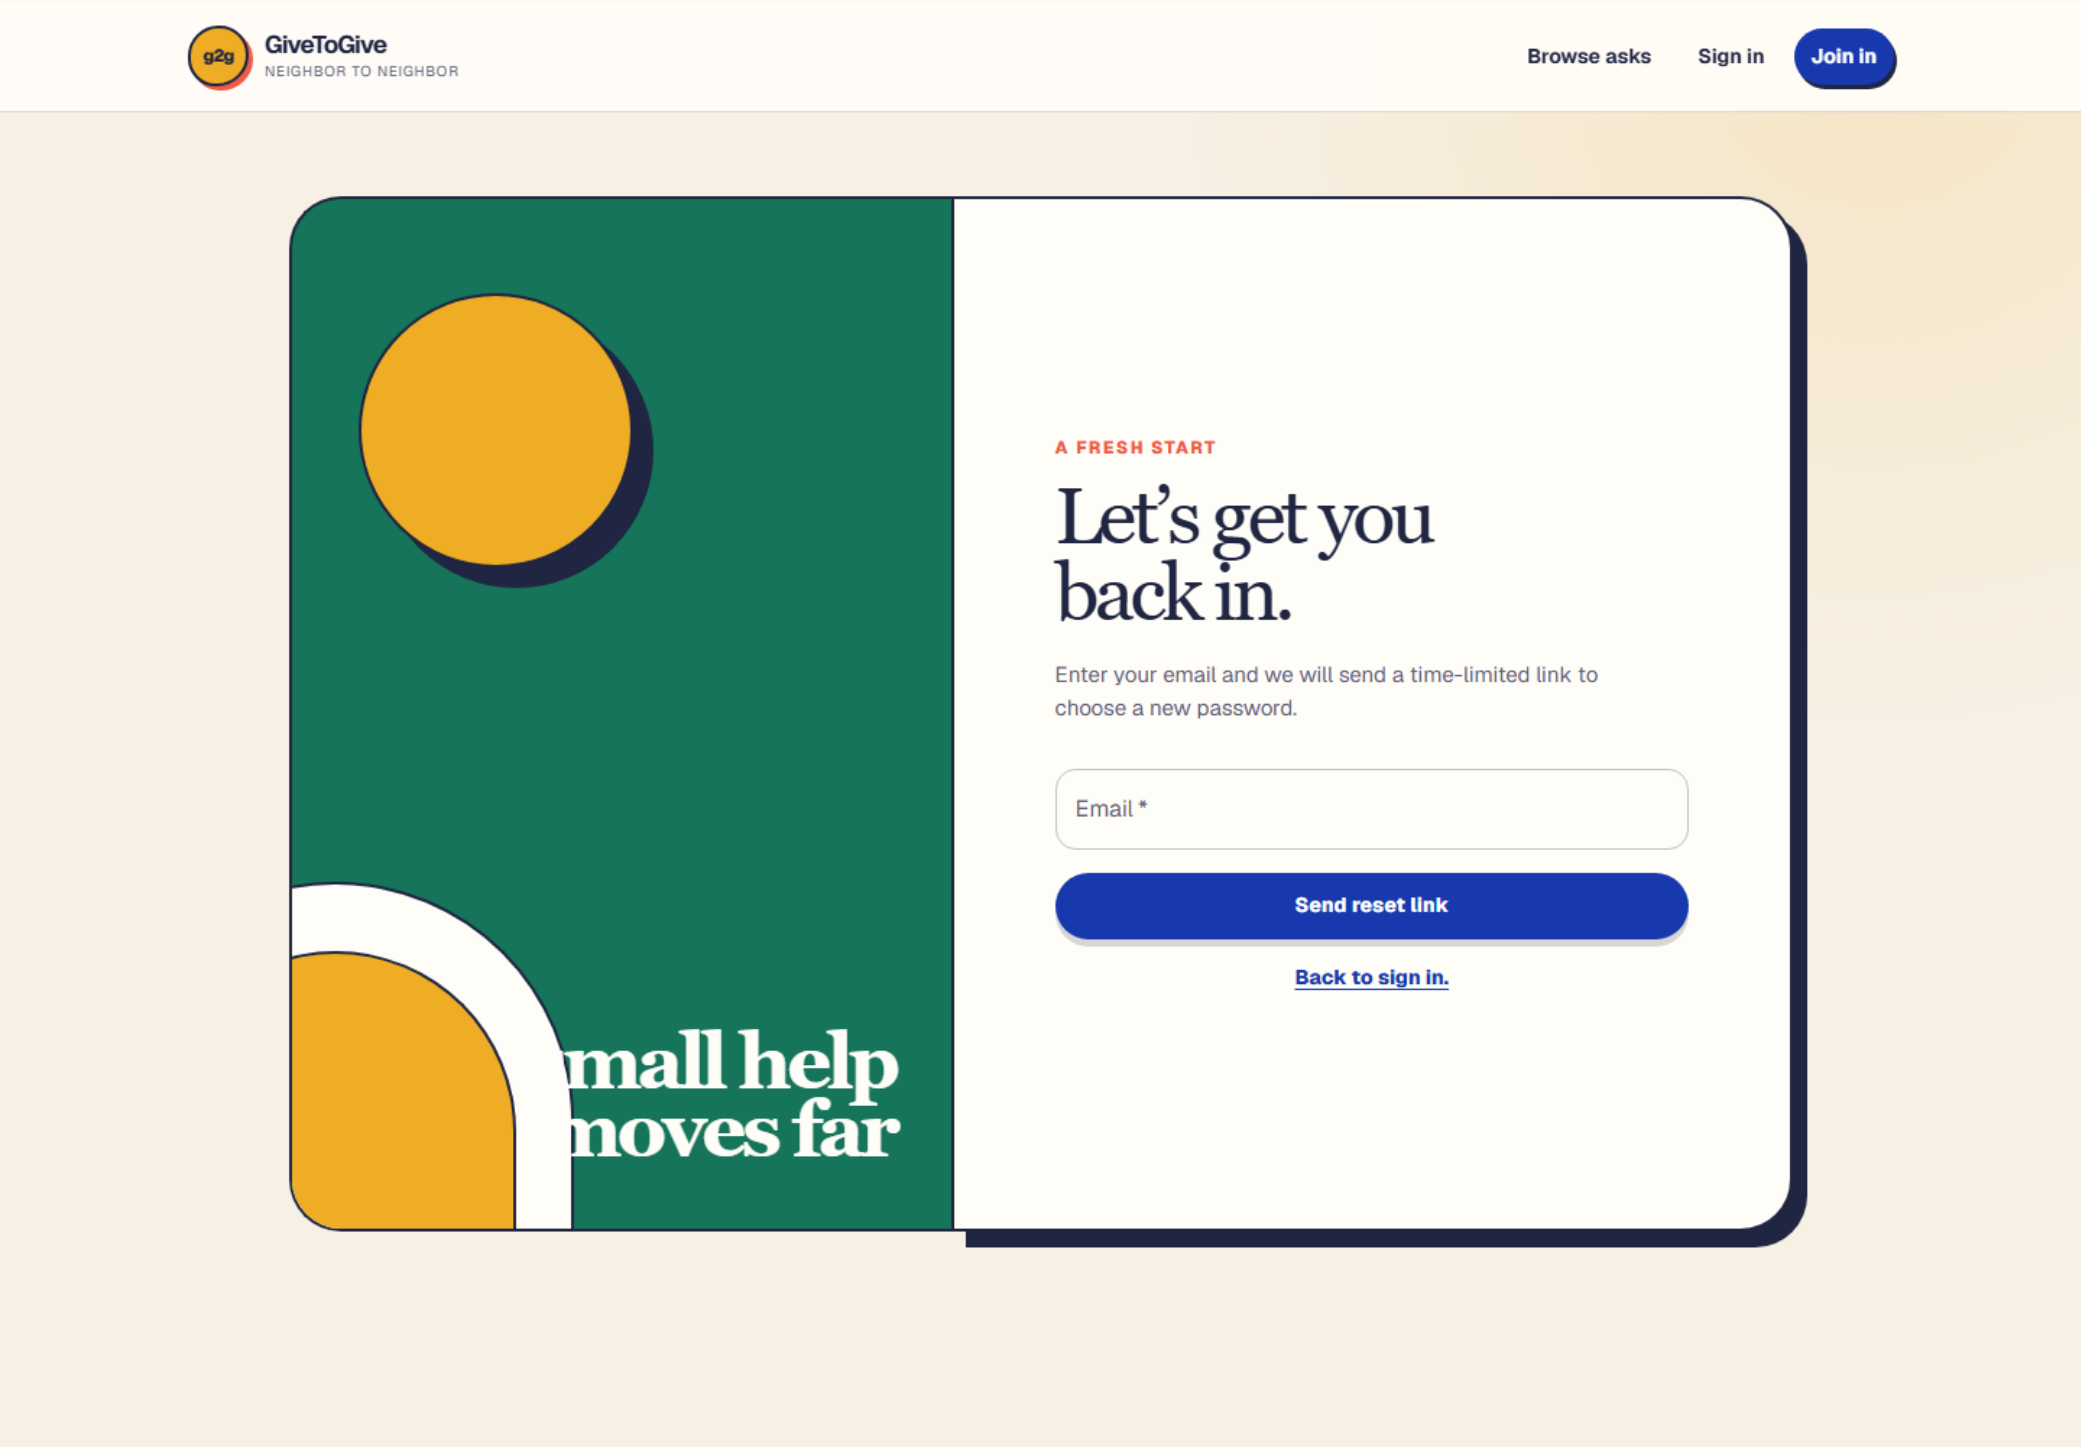

New members create an account and confirm their email before password sign-in.

/signup

16 / Account - password recovery

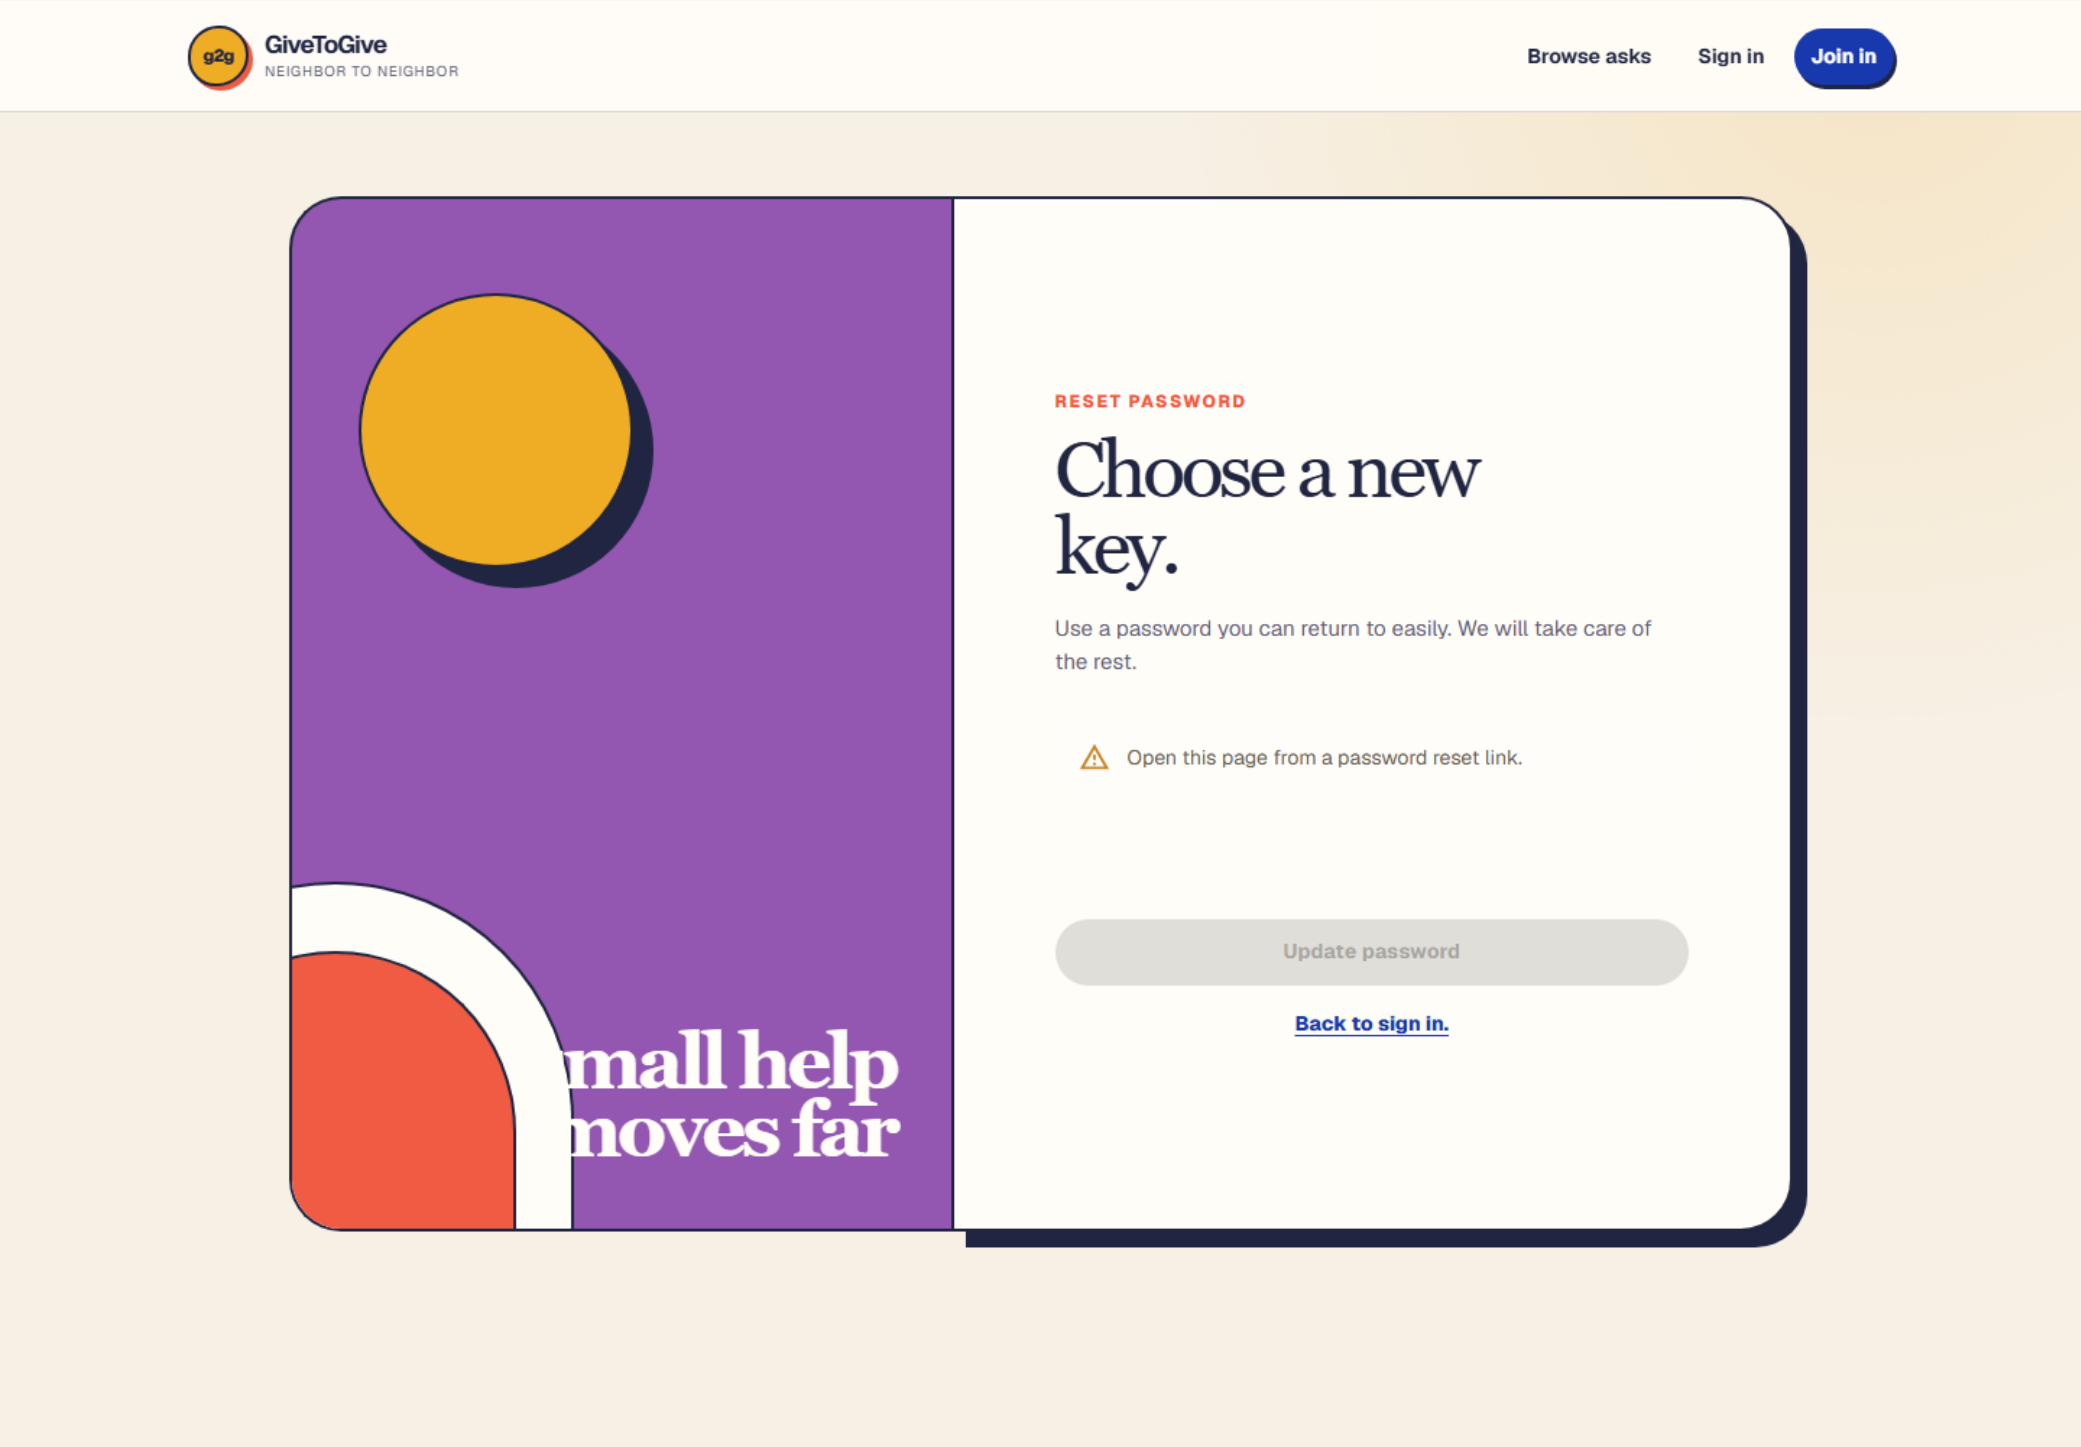

Members request a time-limited password reset link.

/forgot-password

17 / Account - missing reset link

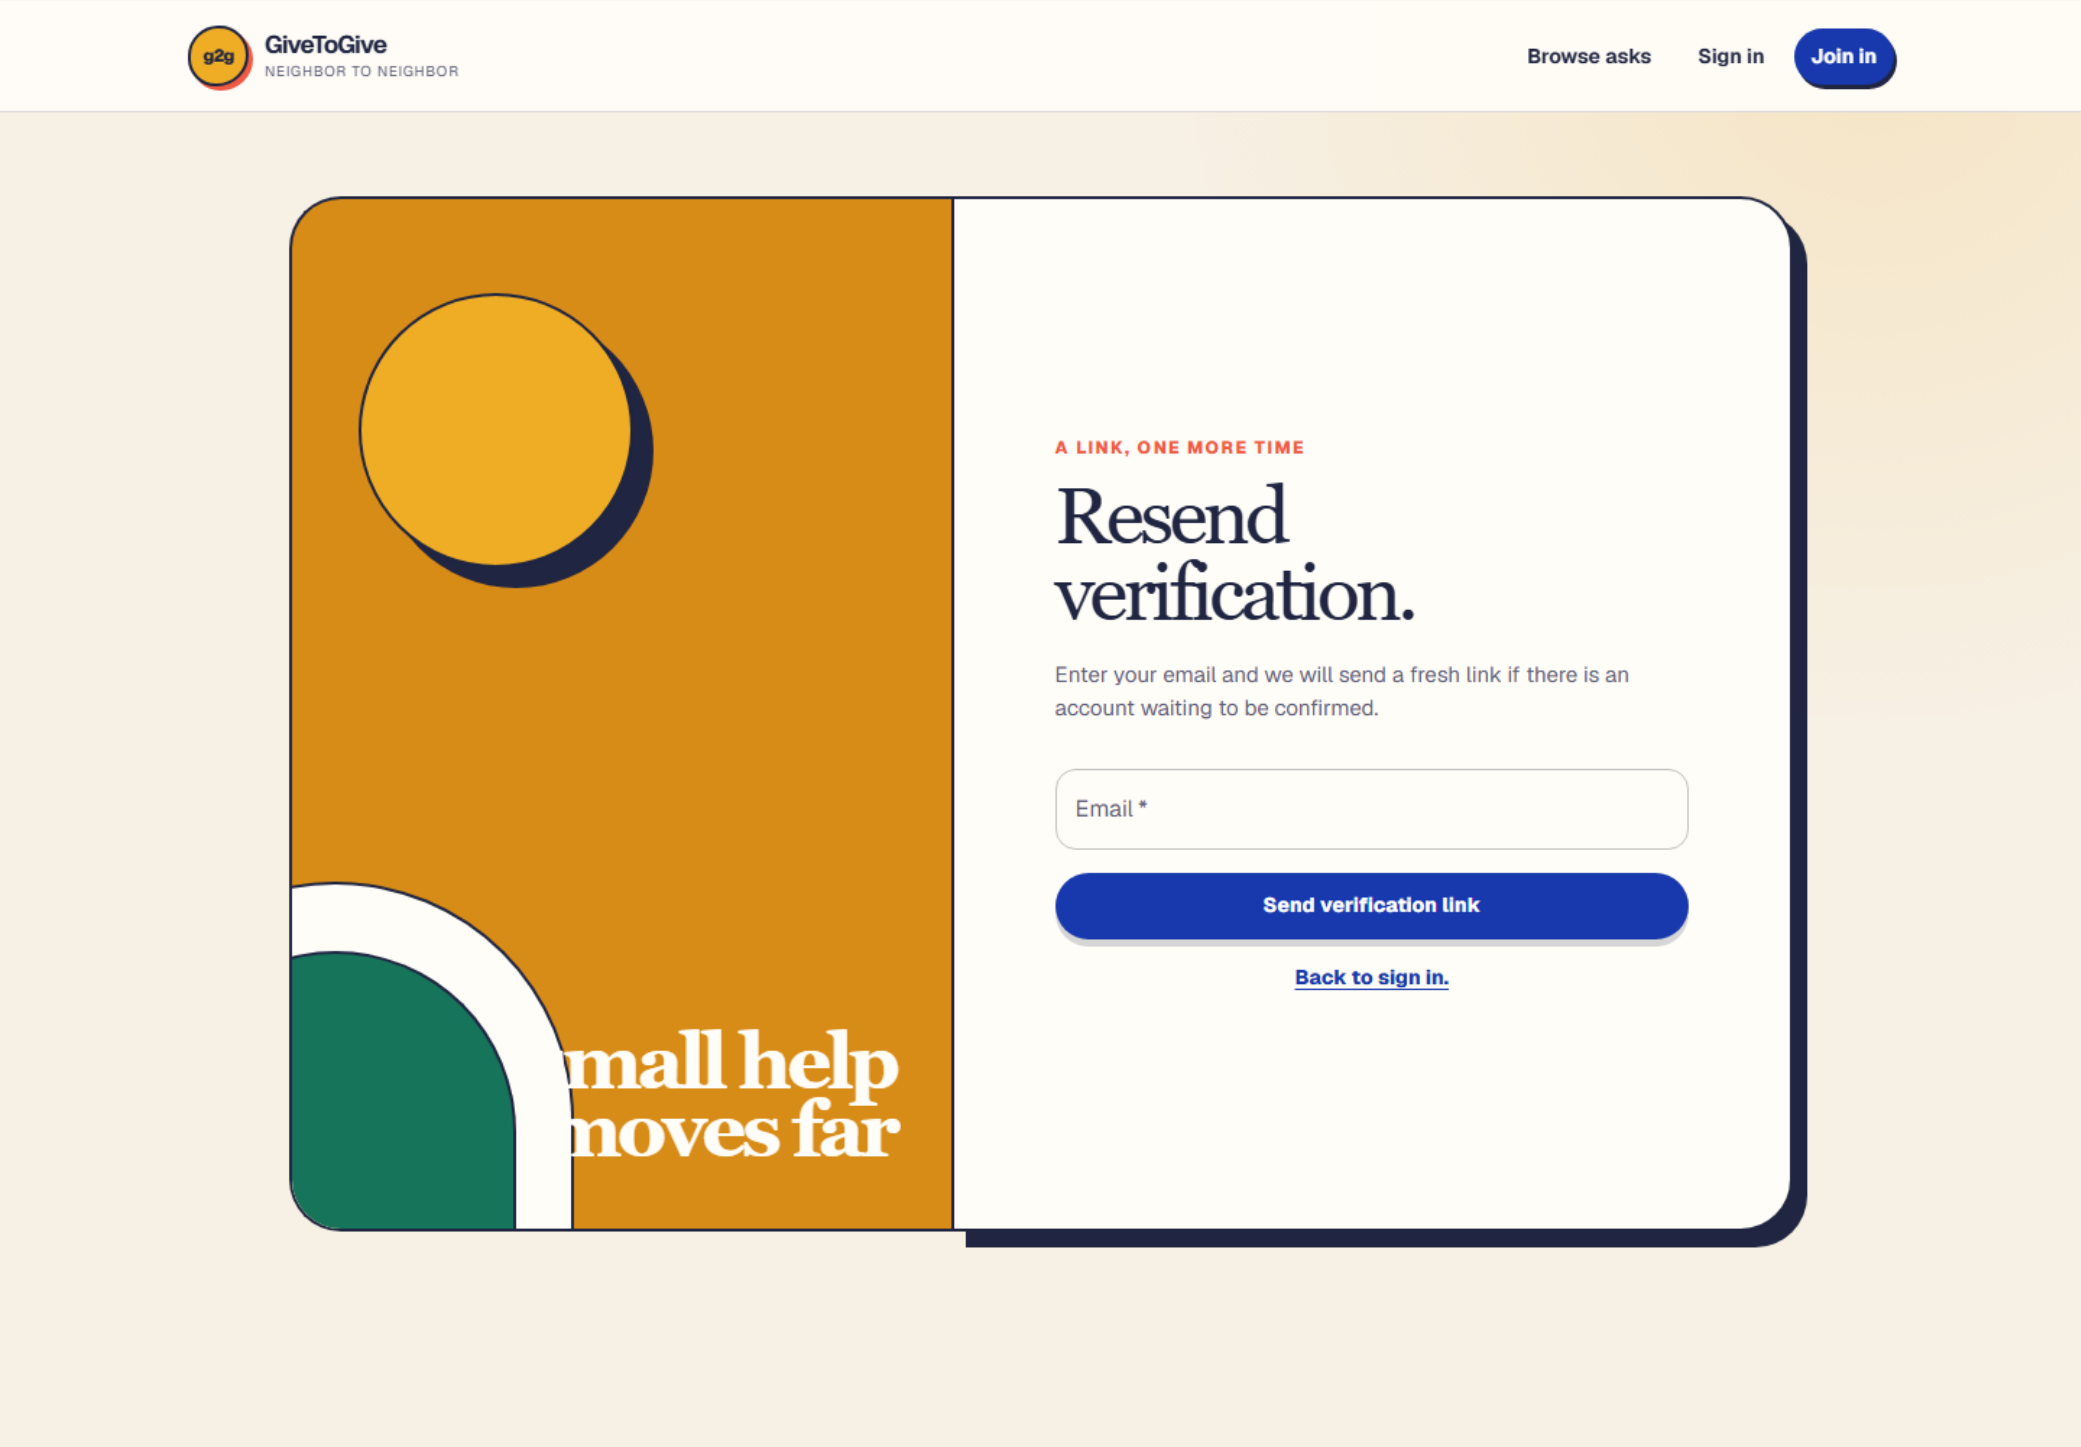

The reset form explains when a valid reset link is required.

/reset-password

18 / Account - resend verification

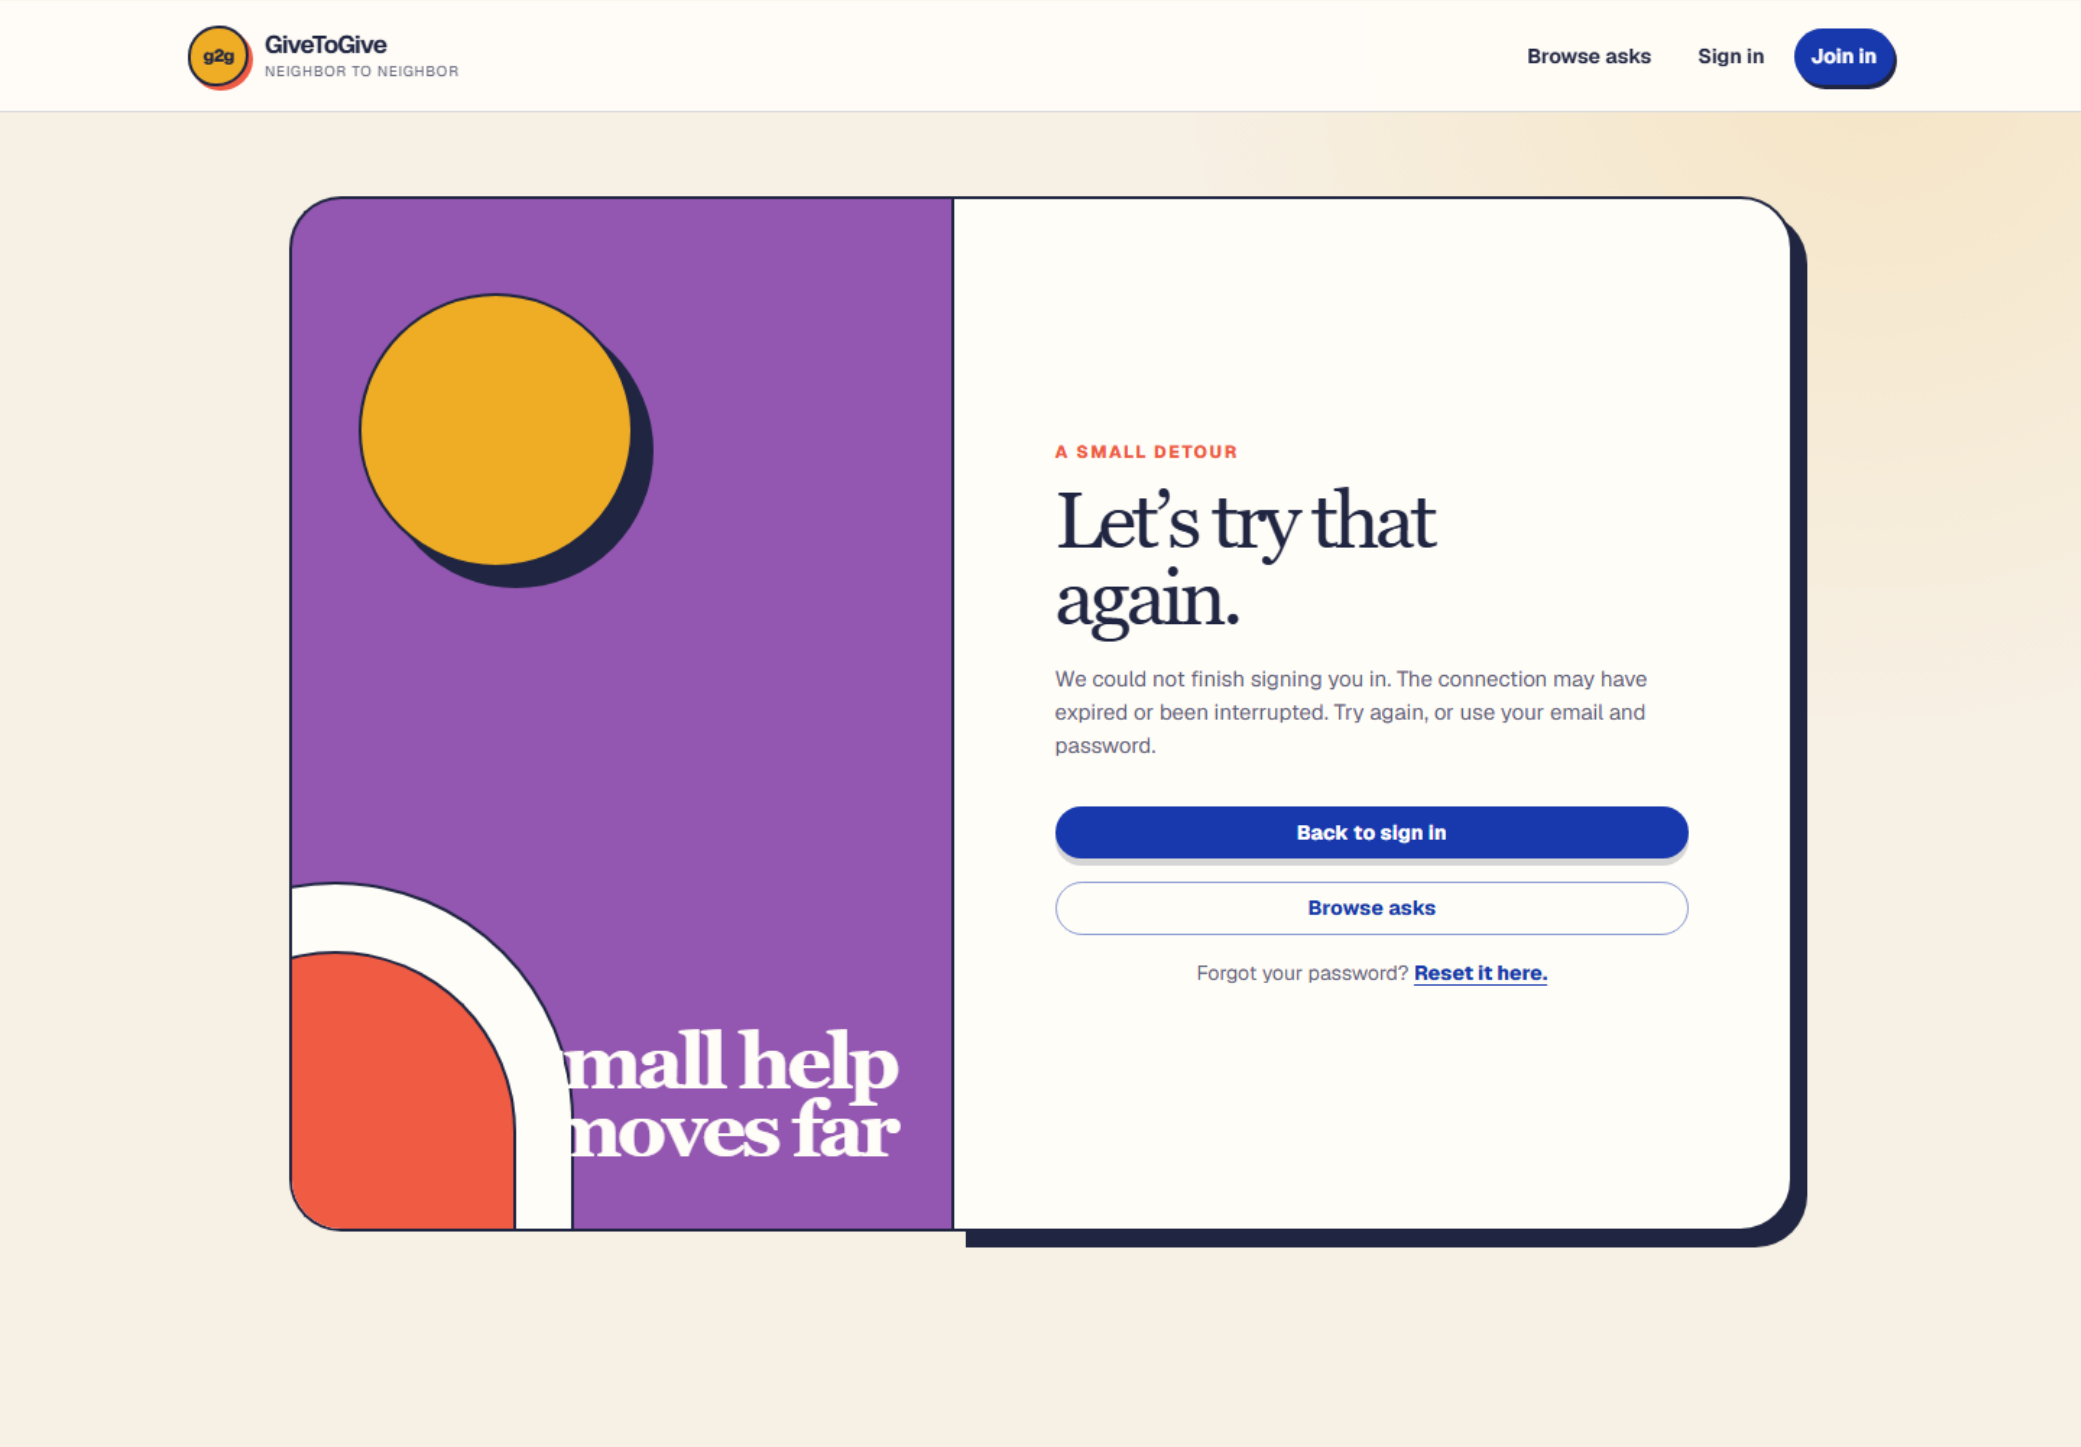

An unverified member can request a fresh email confirmation link.

/verify-email

19 / Account - sign-in recovery

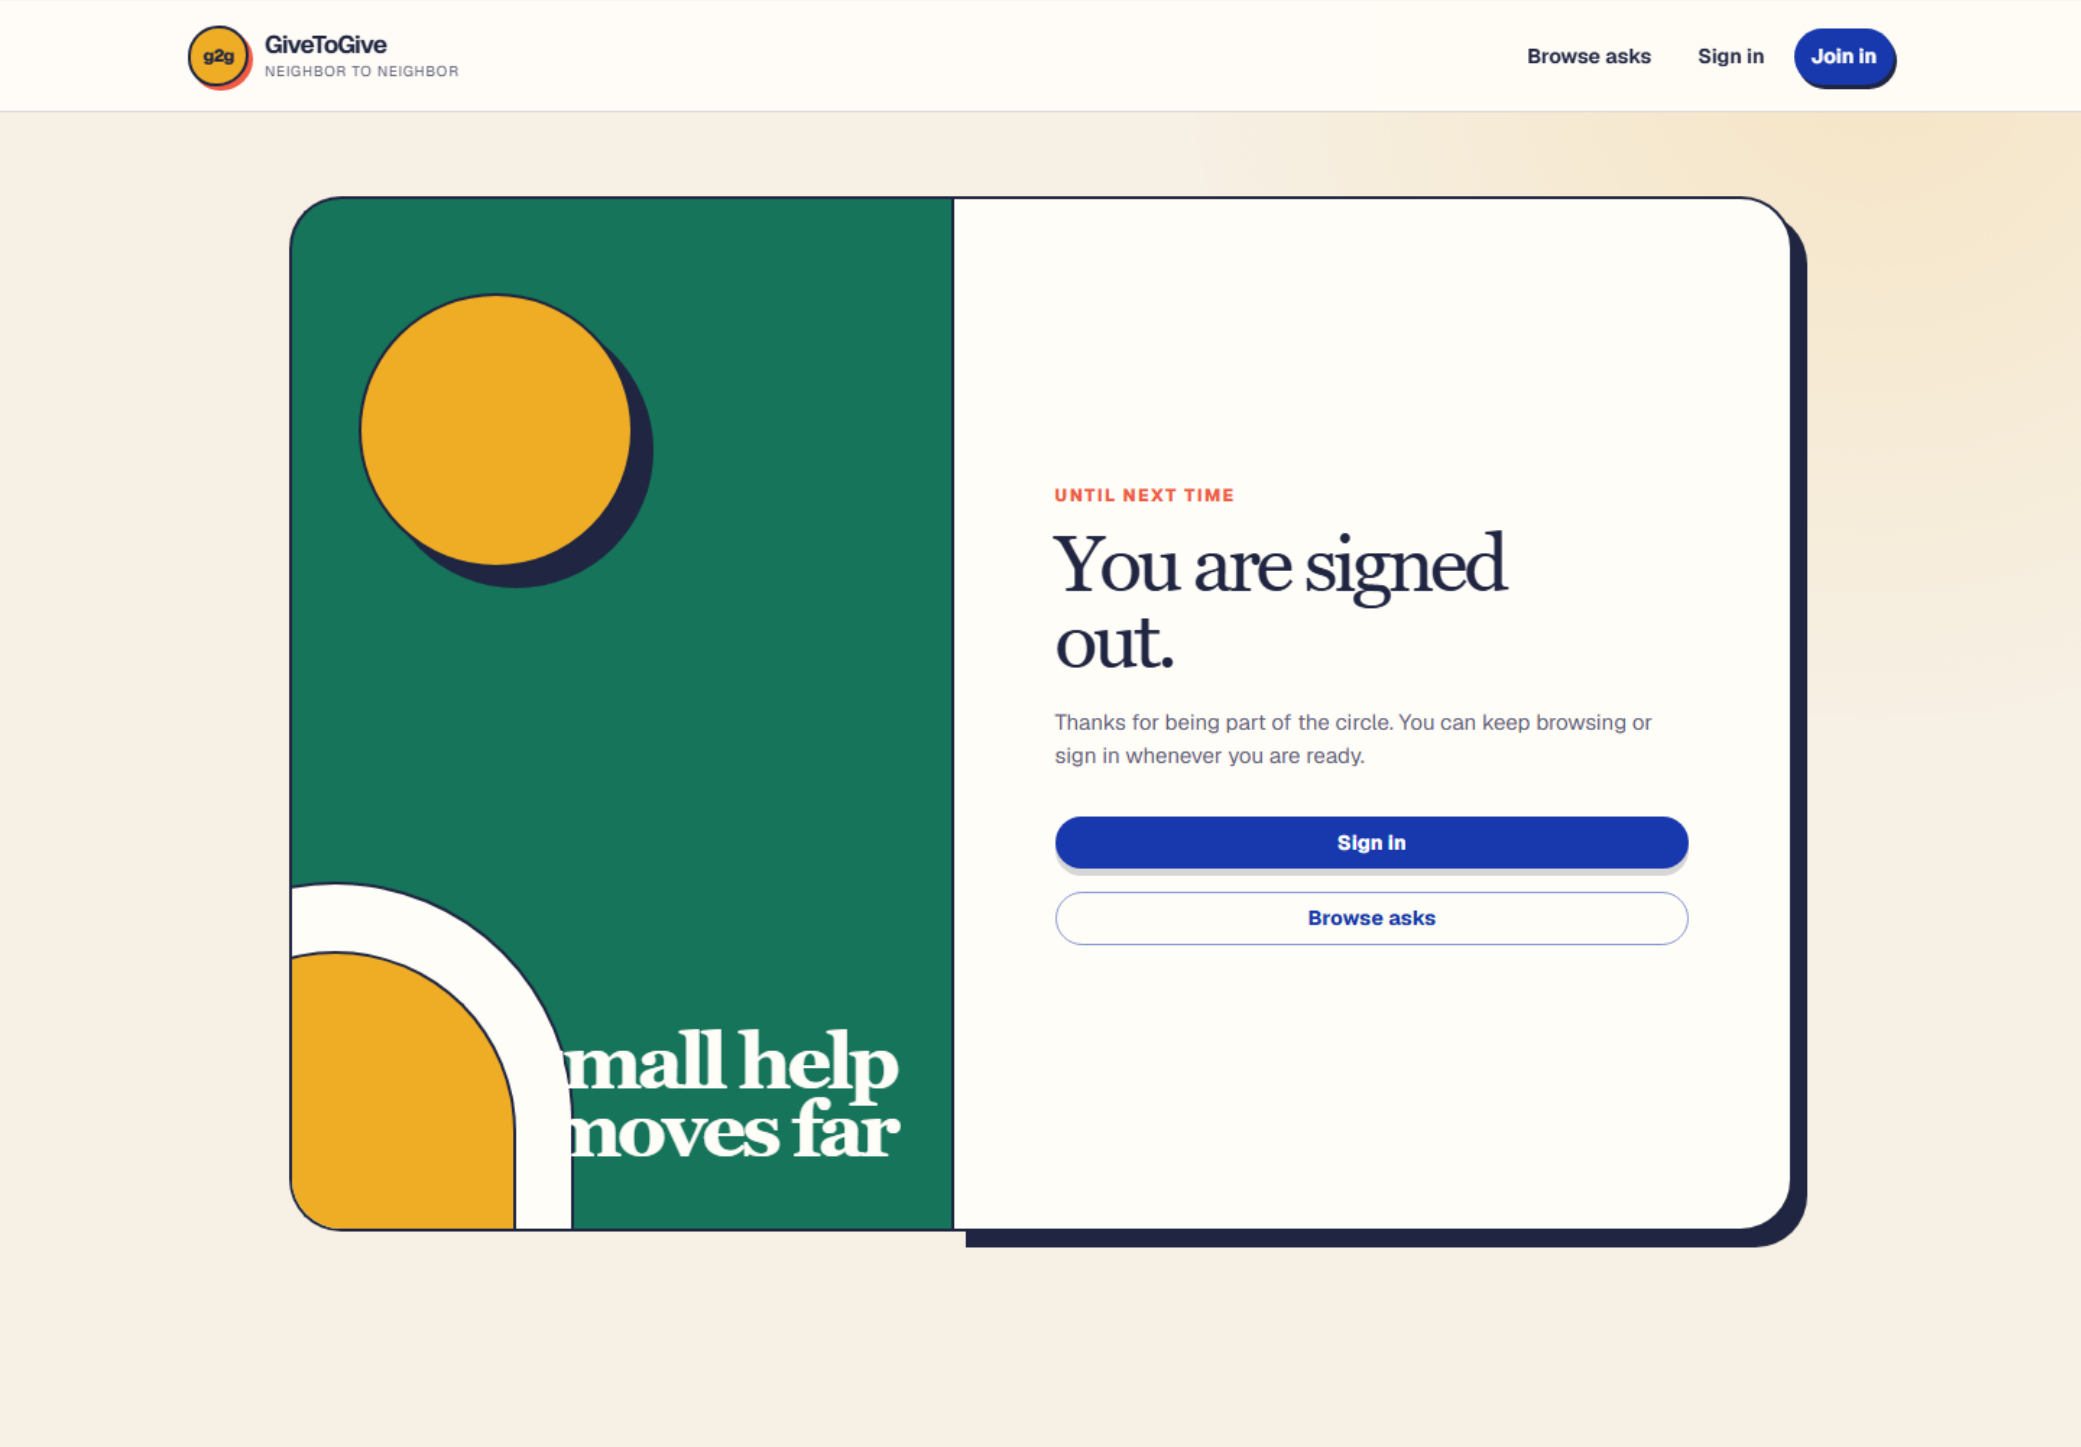

A branded recovery page avoids exposing internal authentication errors.

/auth-error

20 / Account - already signed out

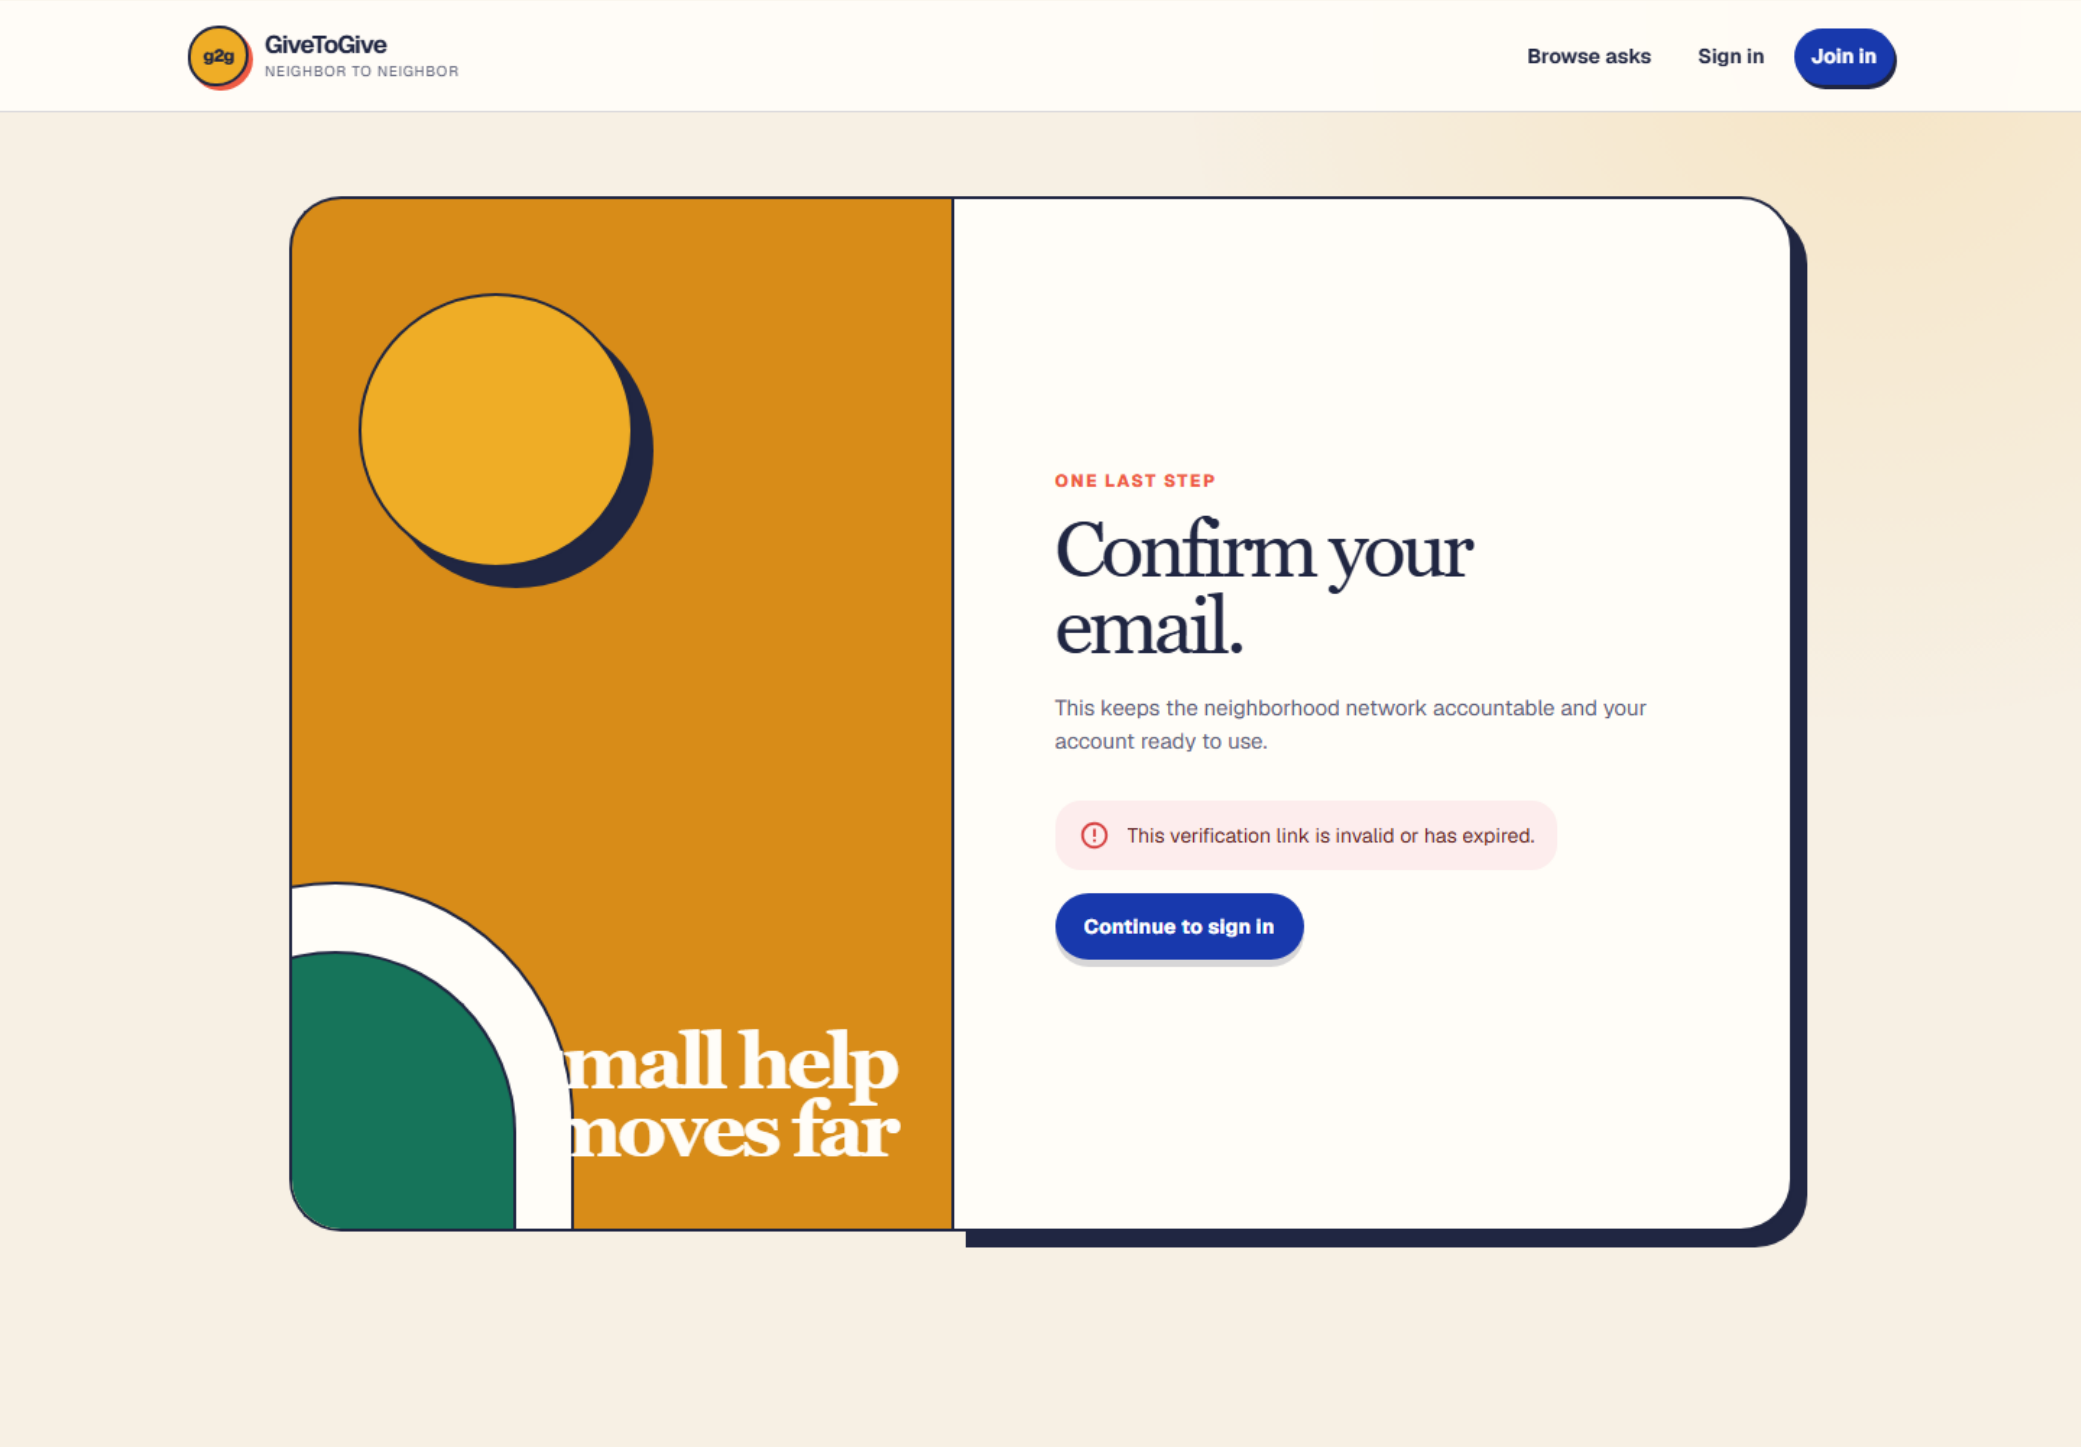

Signed-out visitors can return to browsing or sign in again.

/signout

21 / Account - invalid verification link

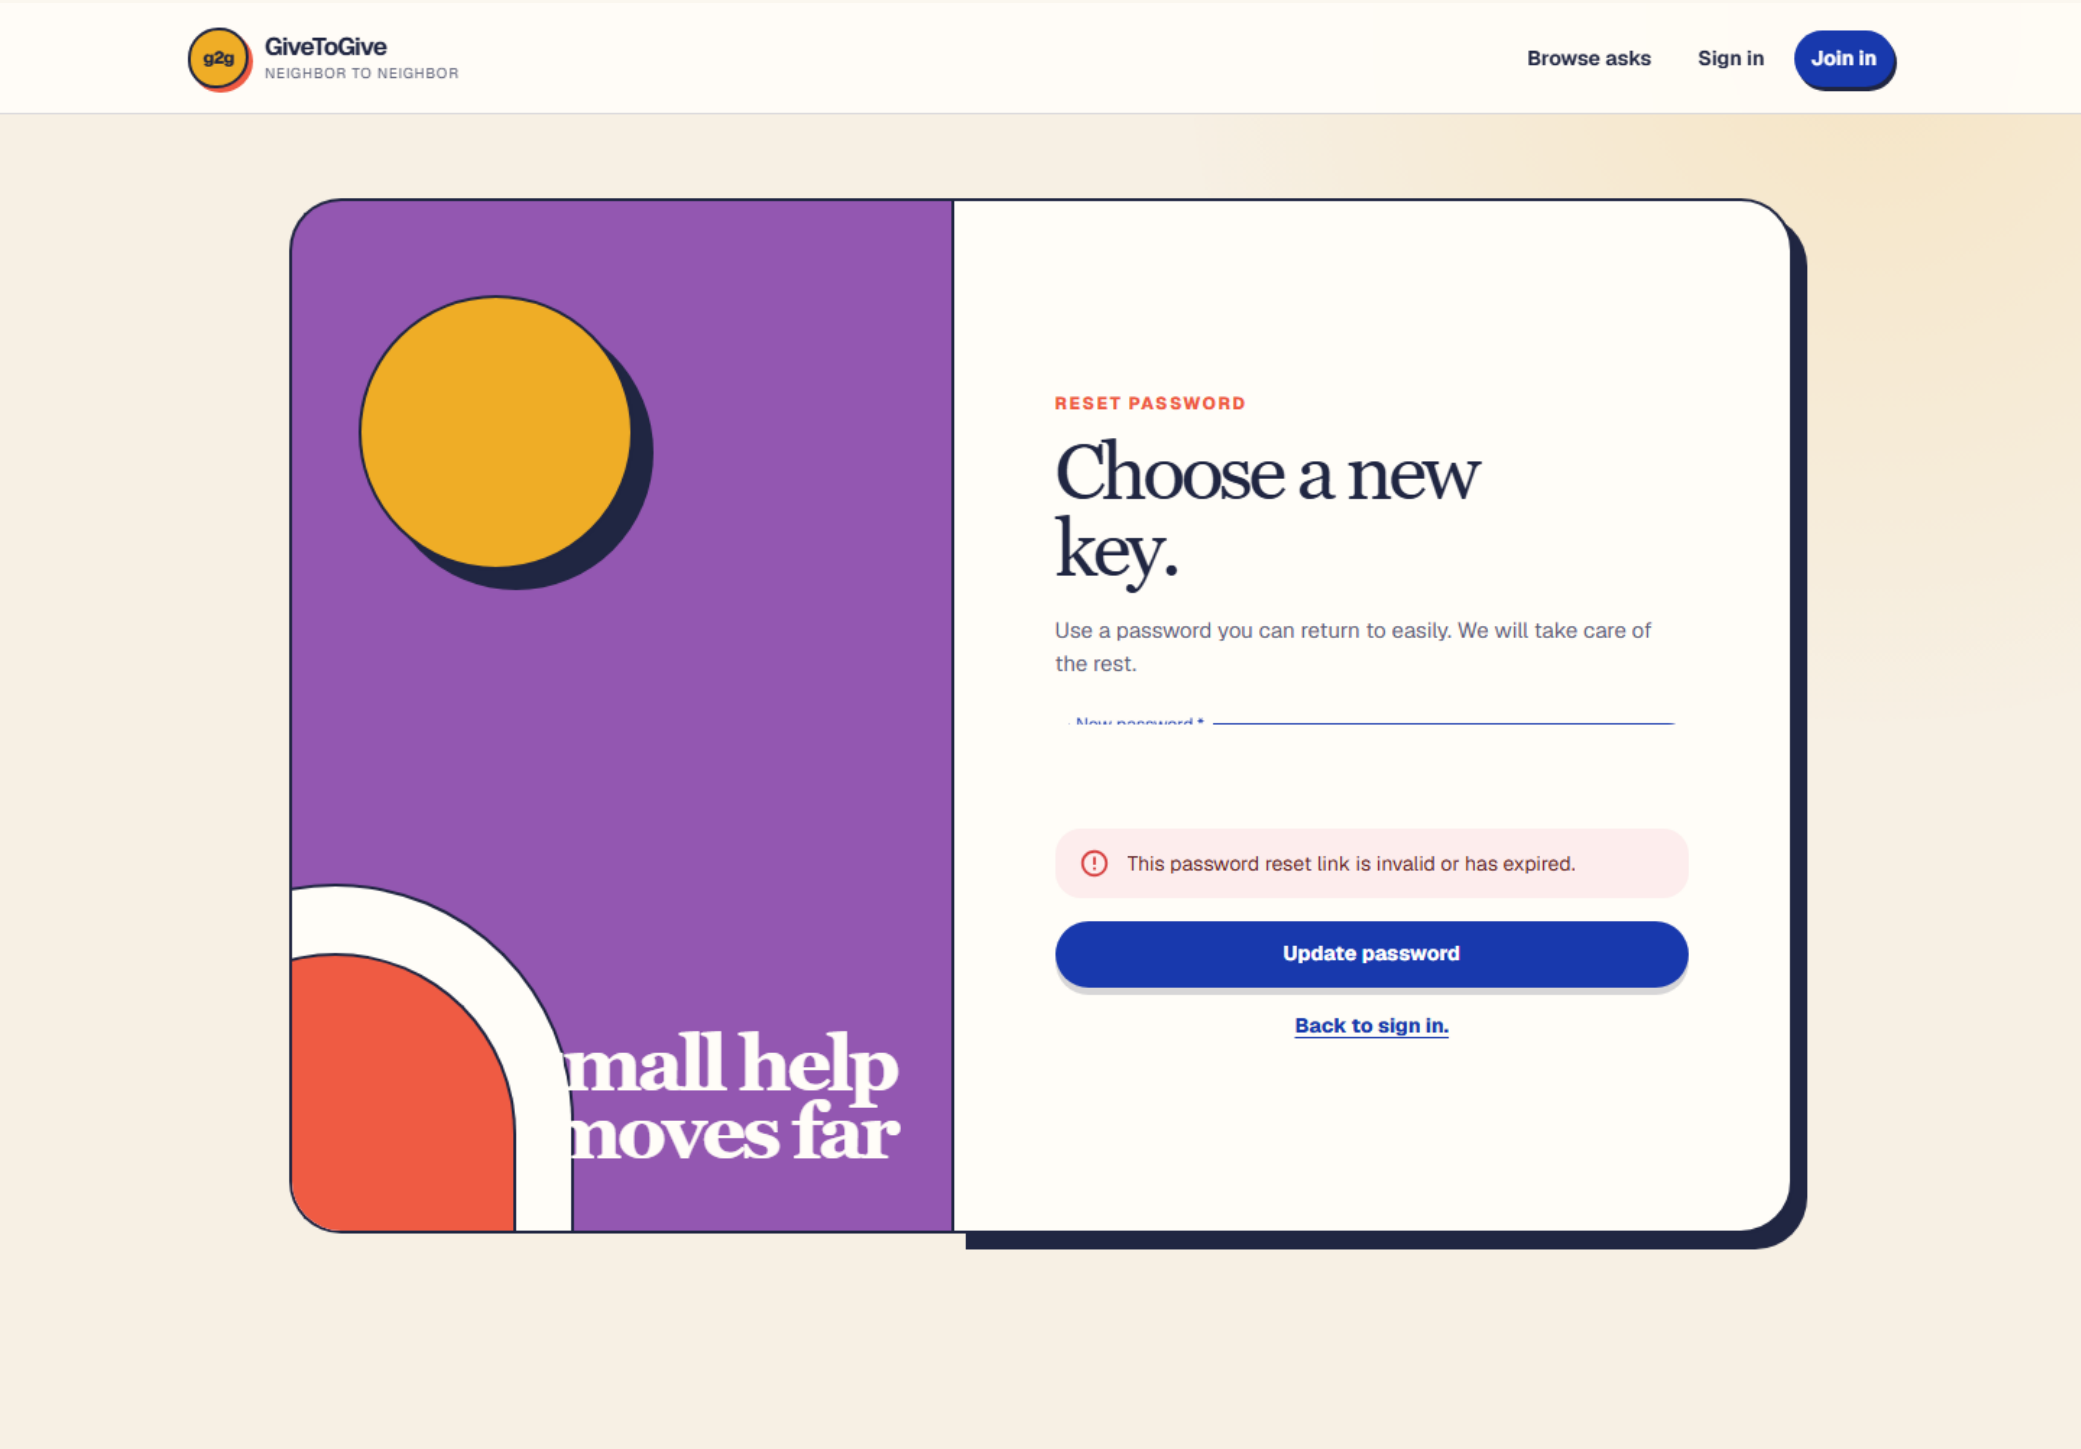

Expired or invalid verification links fail safely. This uses a deliberately invalid placeholder.

/verify-email?token=invalid-example

22 / Account - invalid reset link

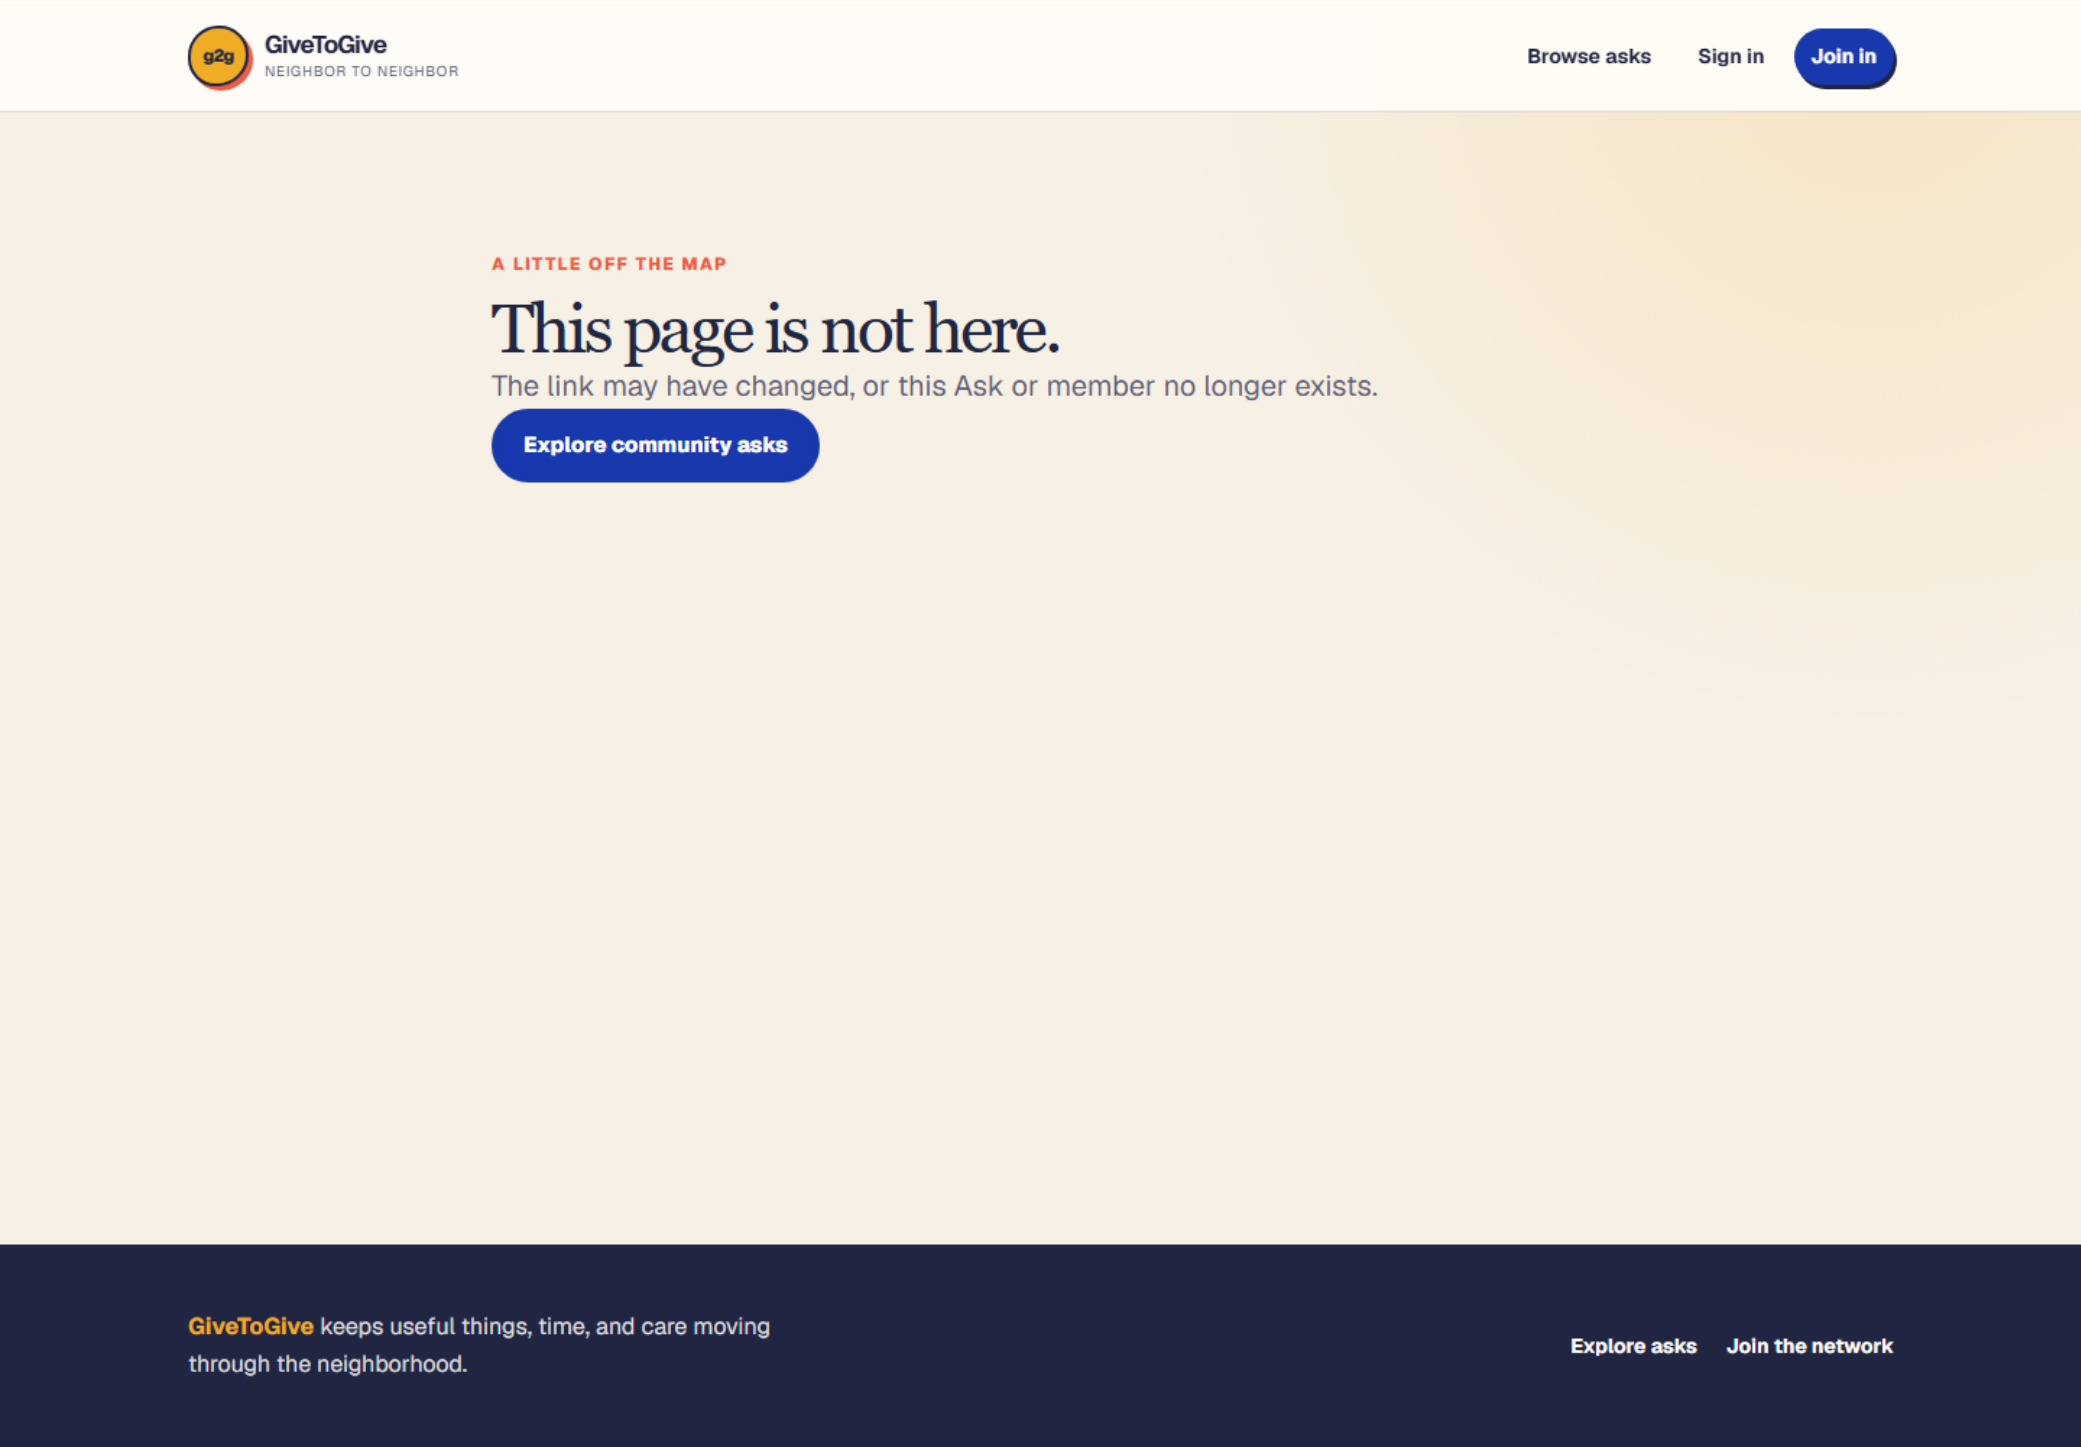

Invalid reset tokens cannot change an account password. No credential is shown.

/reset-password?token=invalid-example

23 / Recovery - missing page

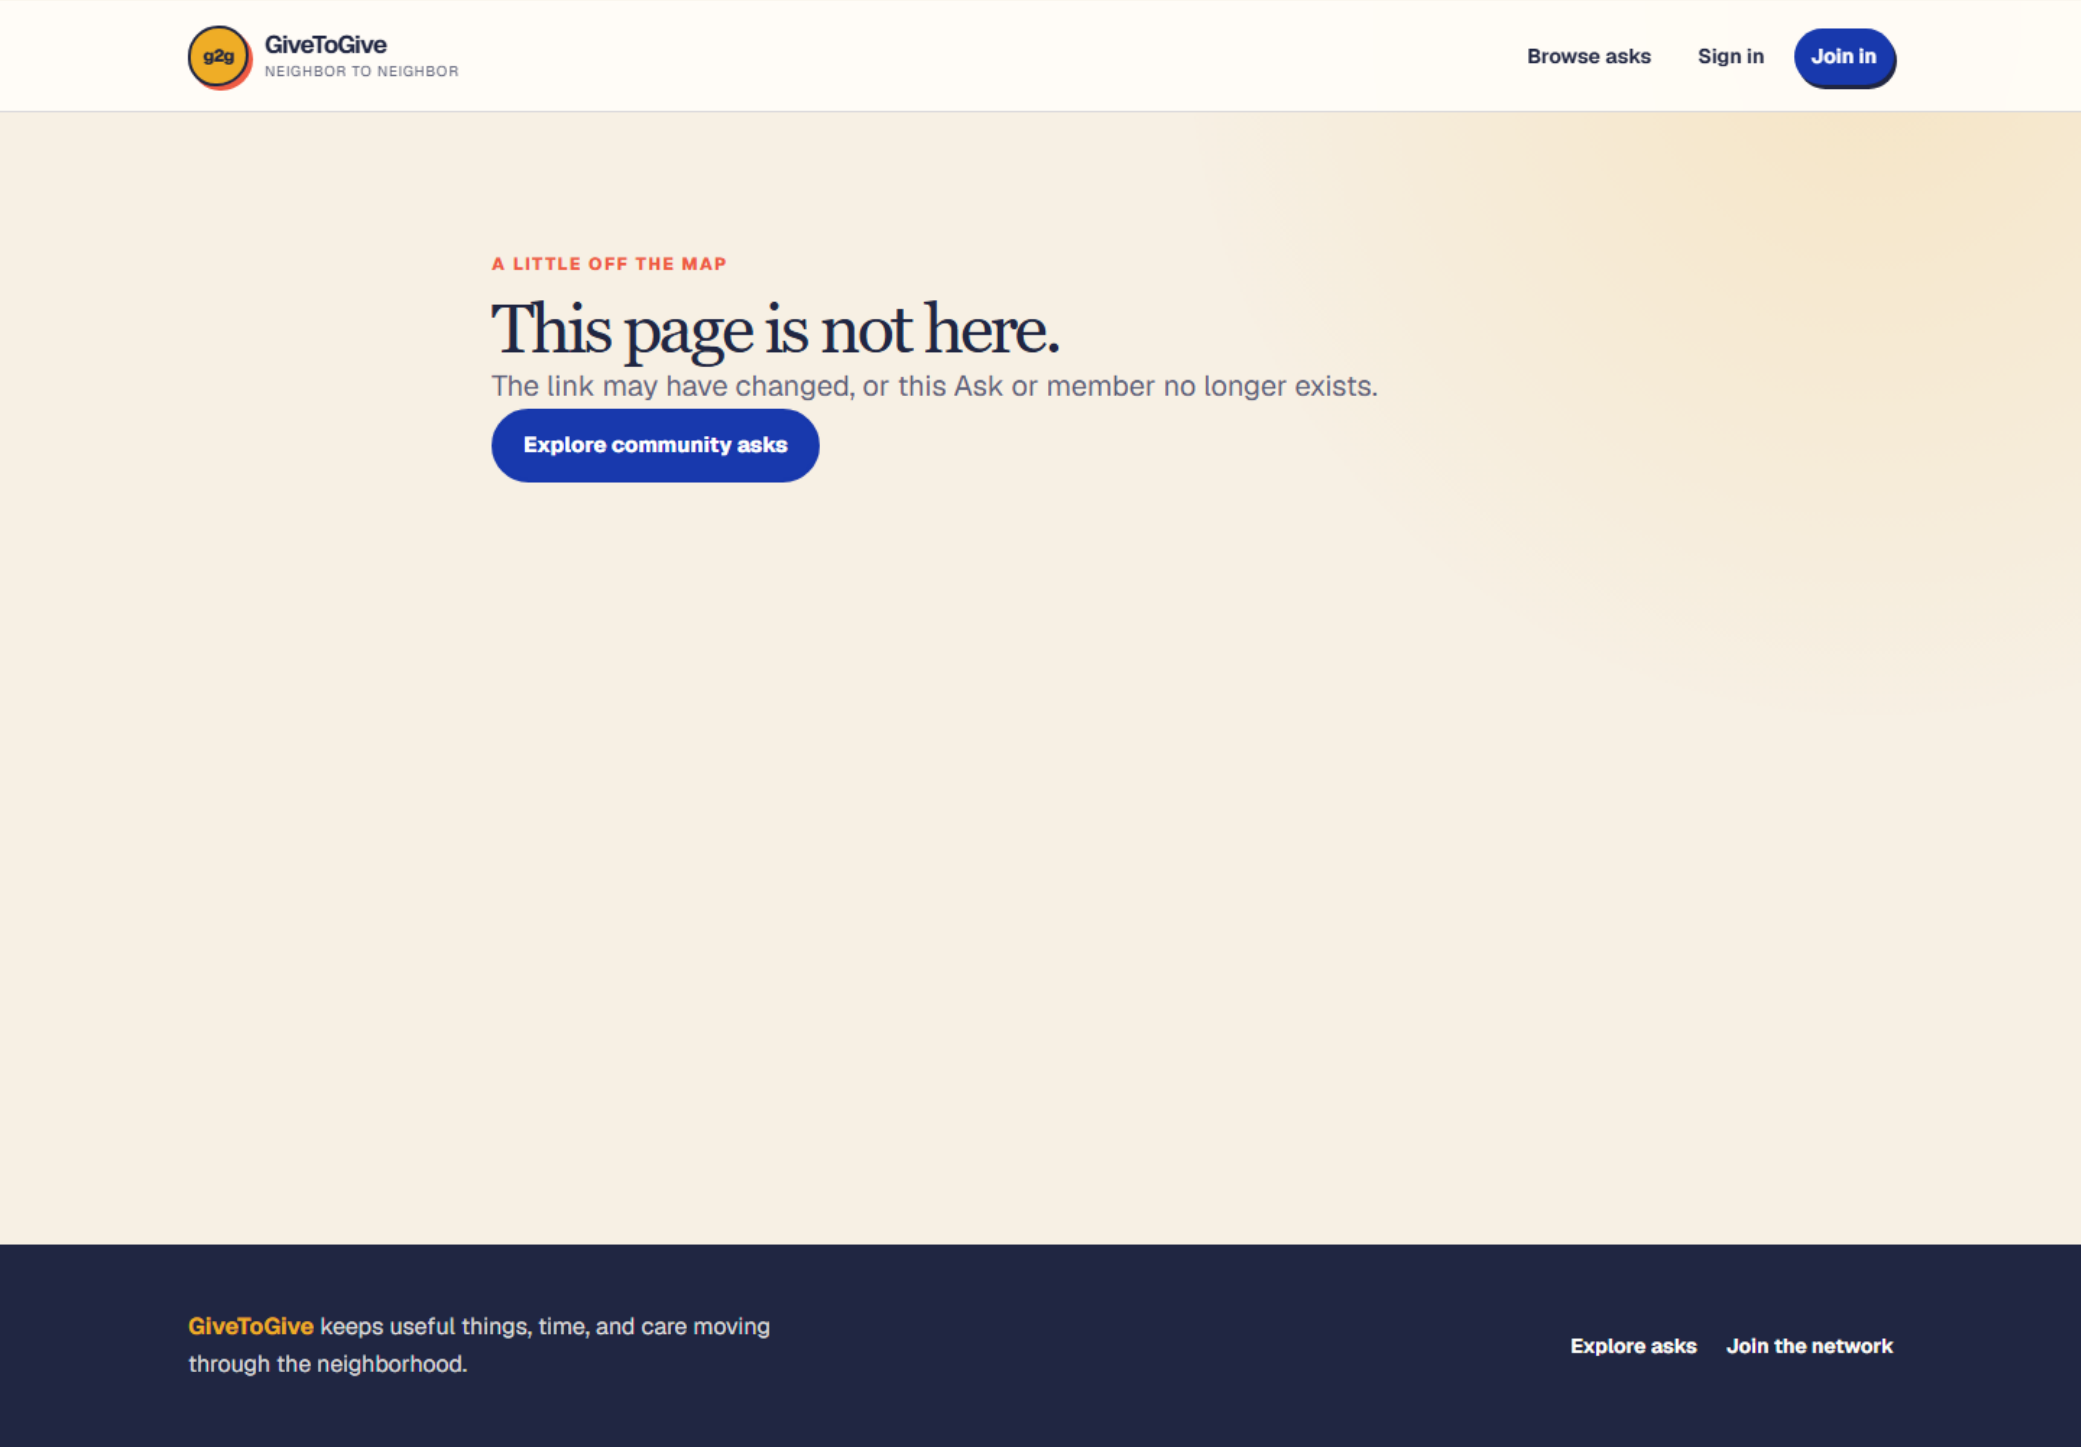

A friendly not-found view offers a useful path back into the site.

/walkthrough-page-not-found

24 / Recovery - missing Ask

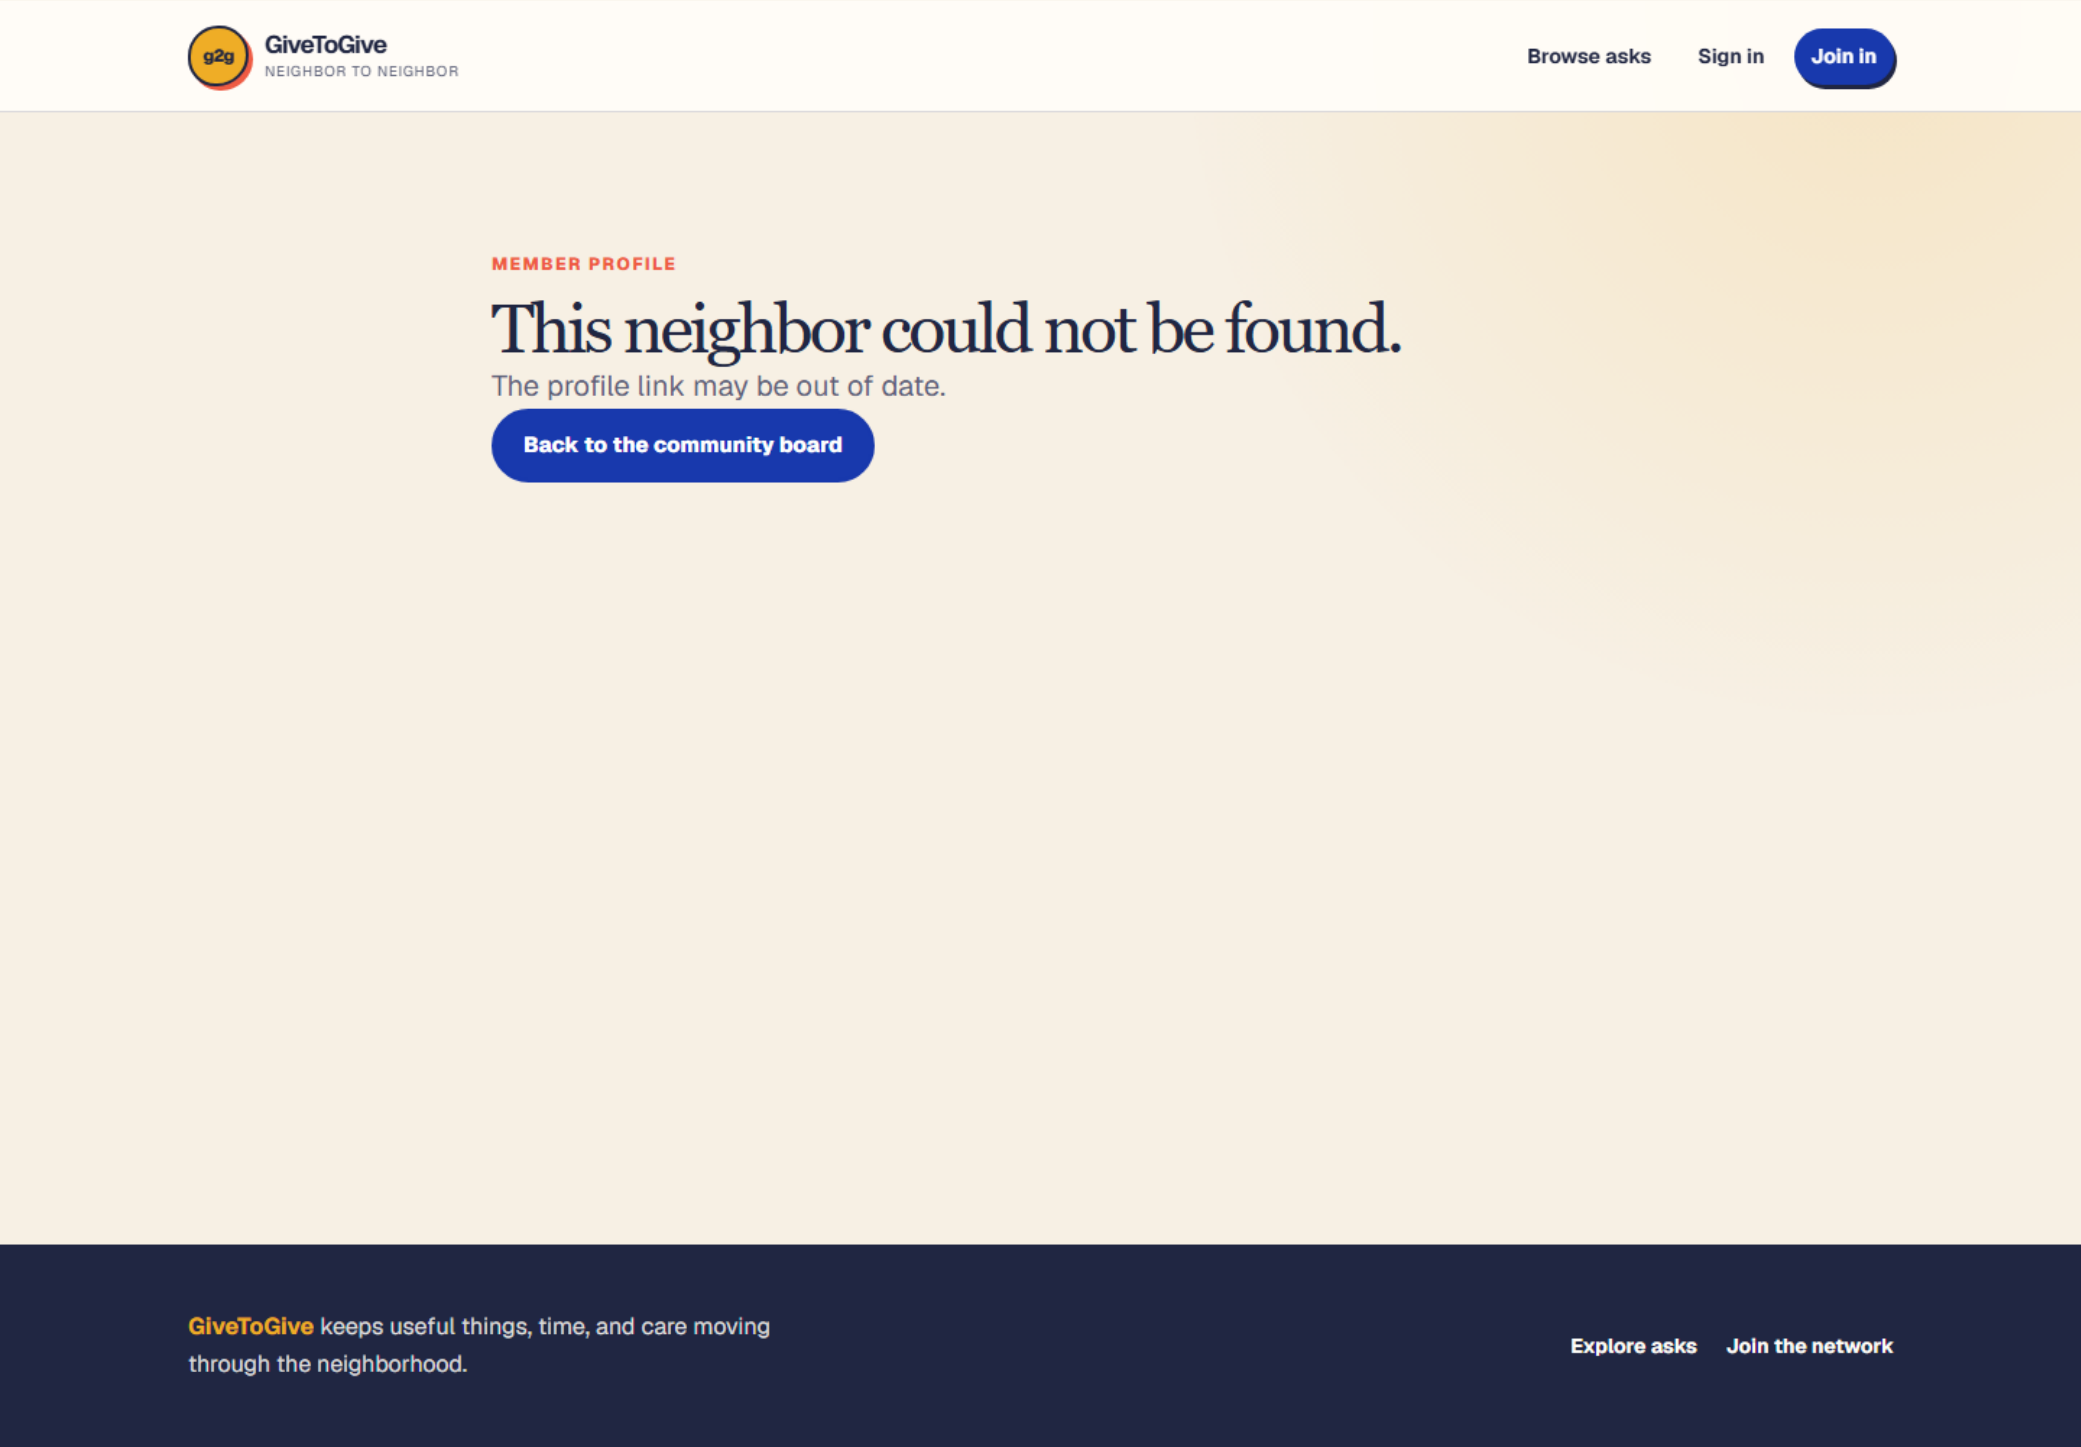

A friendly not-found view offers a useful path back into the site.

/asks/walkthrough-ask-not-found

25 / Recovery - missing member

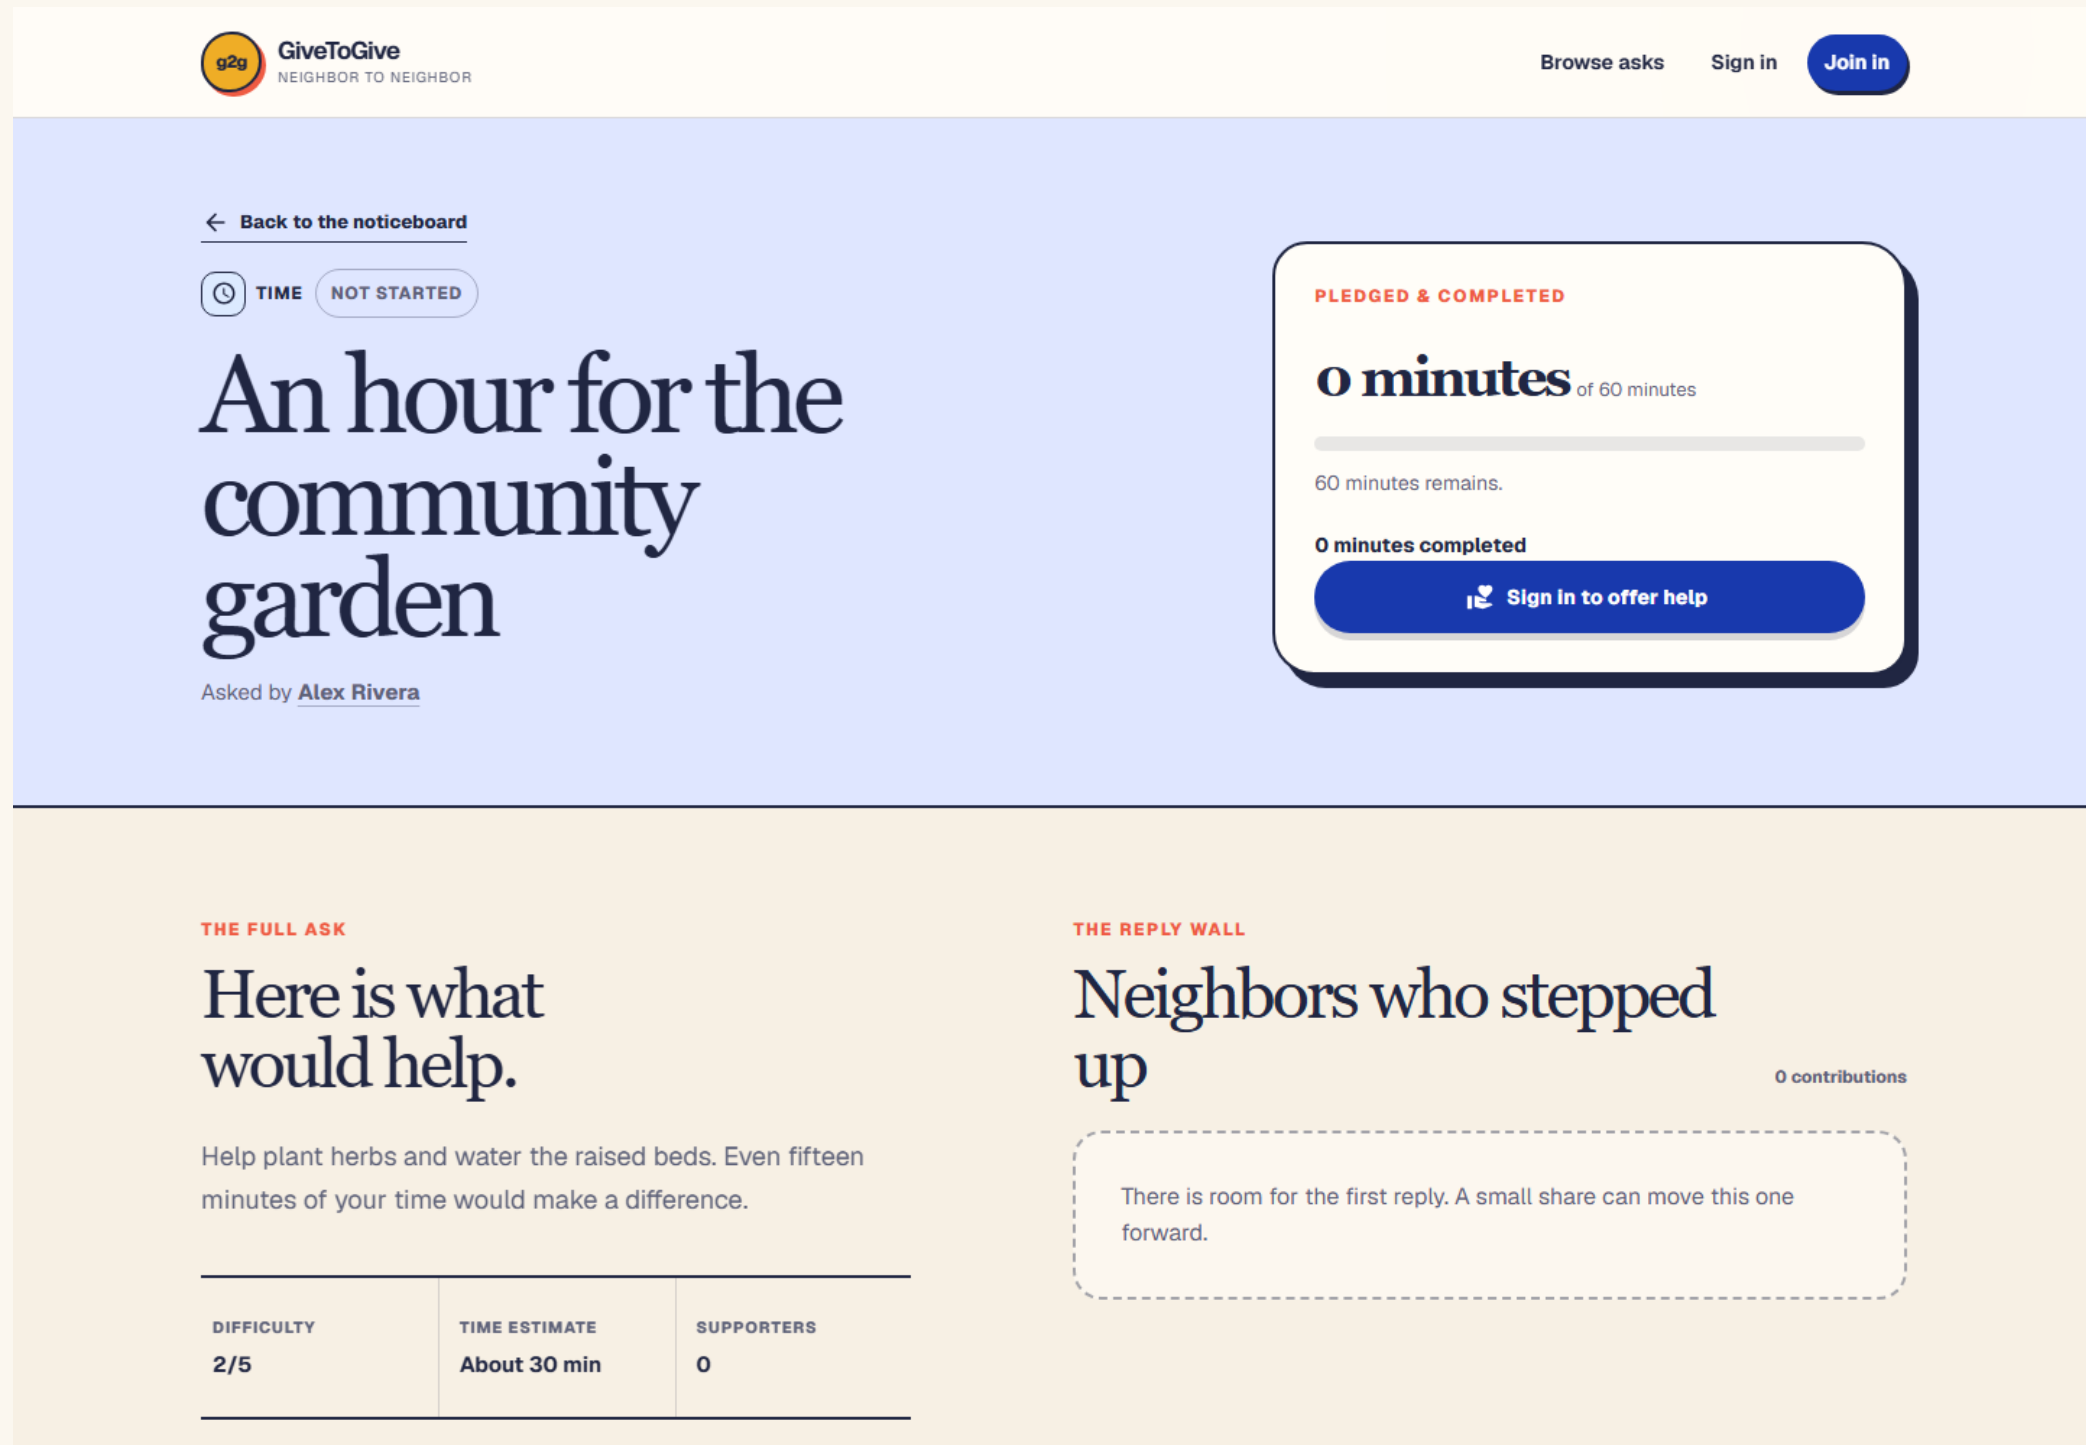

A friendly not-found view offers a useful path back into the site.

/members/walkthrough-member-not-found

26 / Ask detail - time

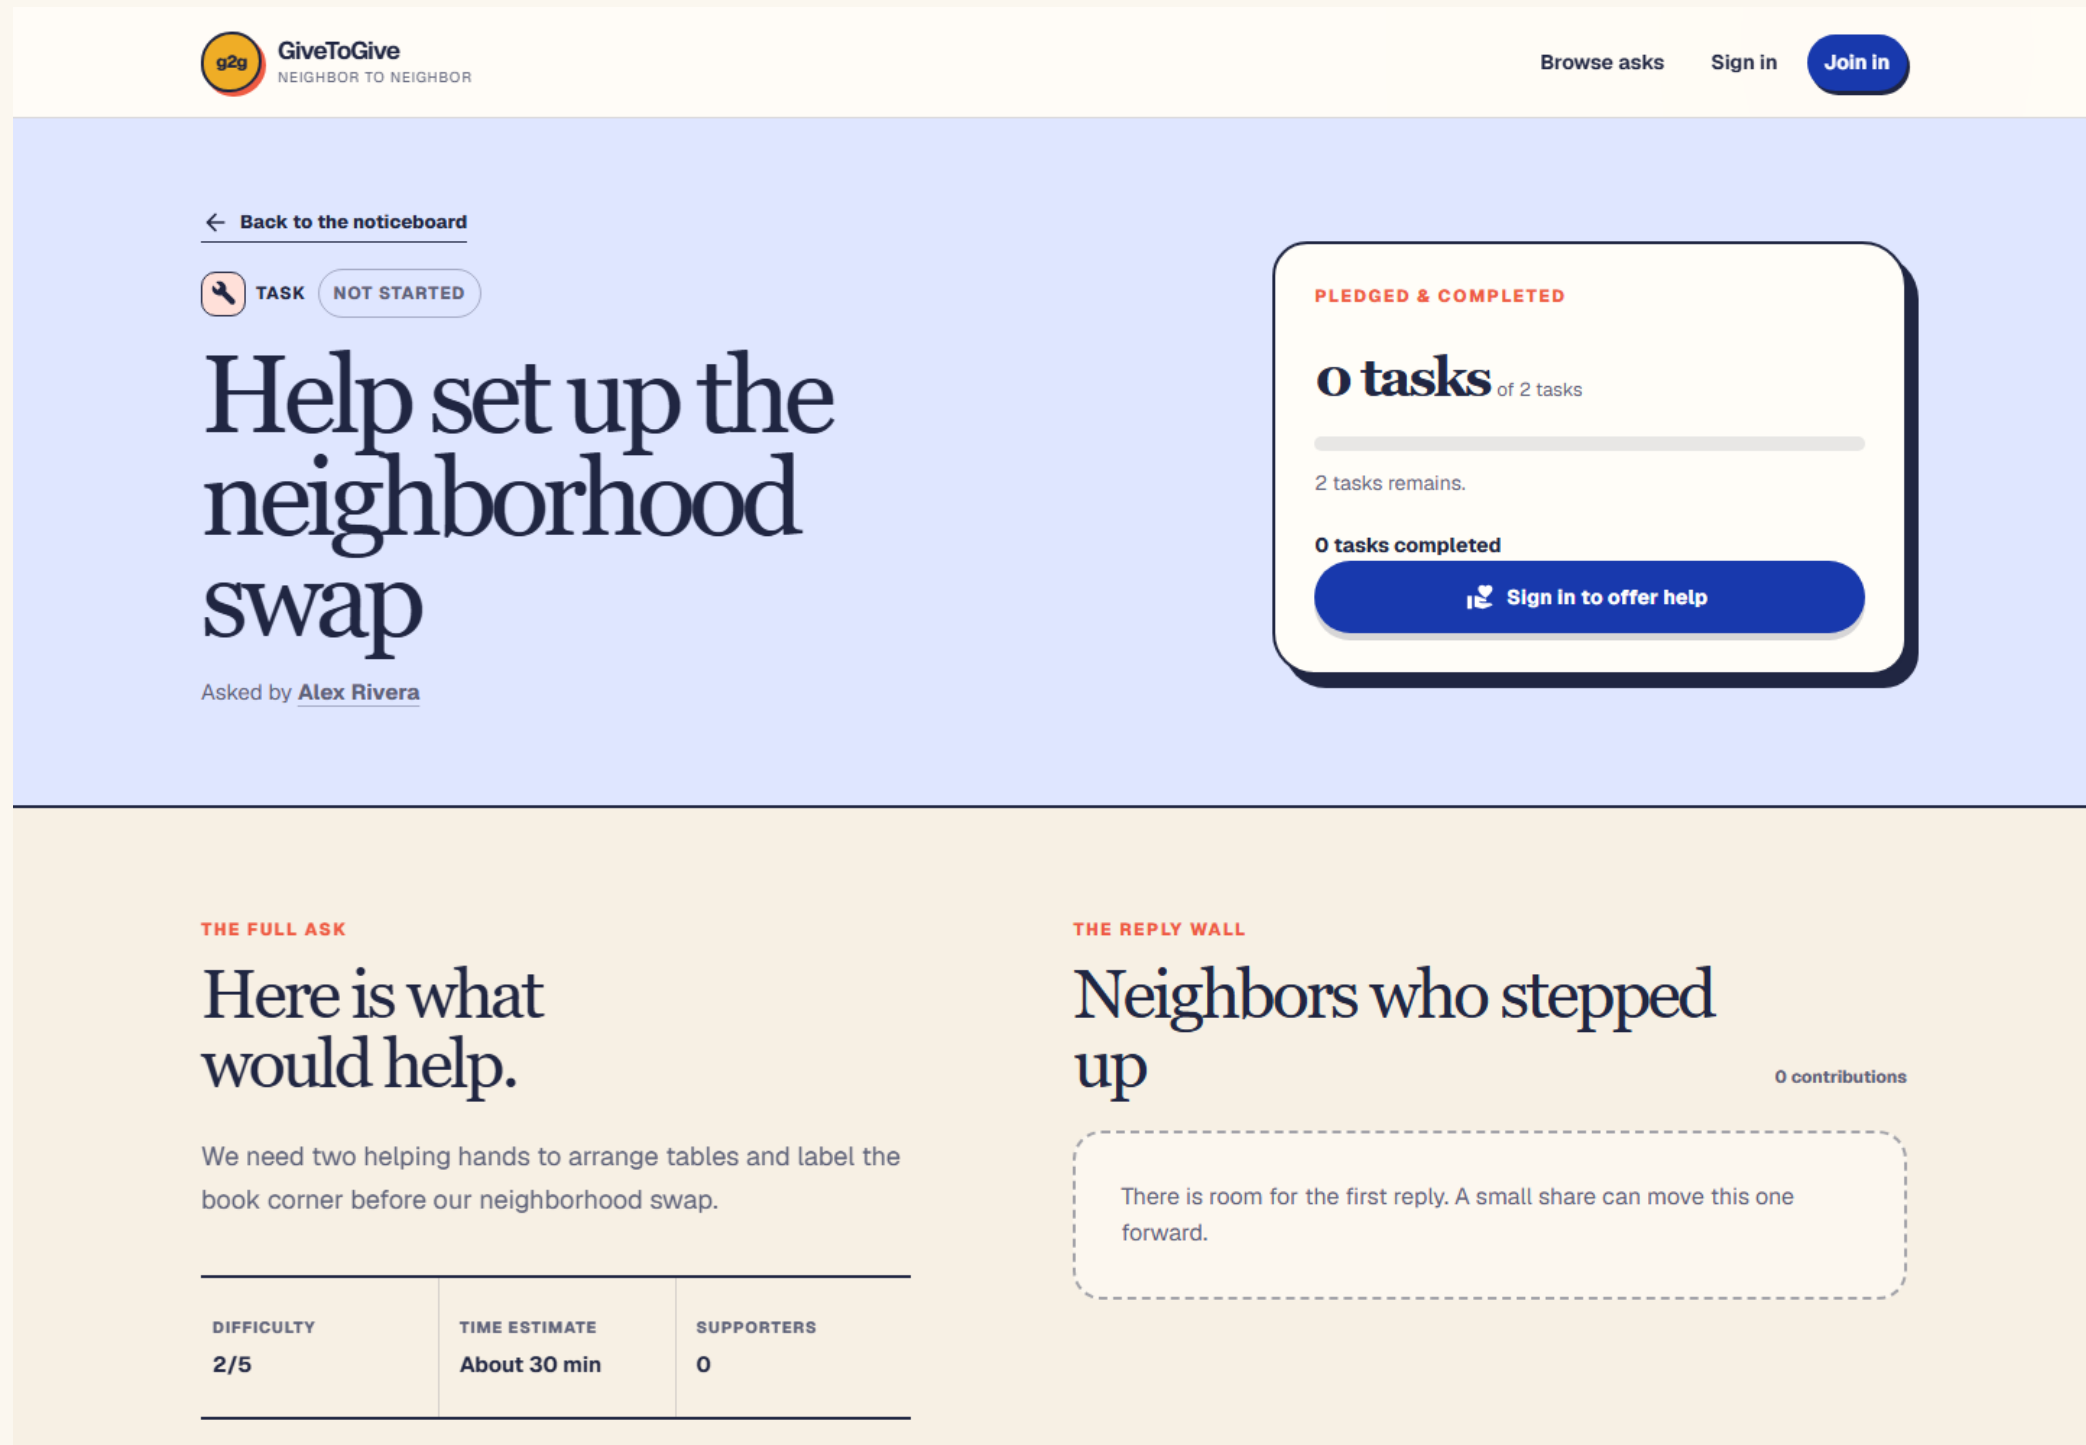

Public detail shows the owner, goal, remaining amount, status, and sign-in invitation. Money is explicitly an off-platform pledge.

[/asks/an-hour-for-the-community-garden](#)

27 / Ask detail - task

Public detail shows the owner, goal, remaining amount, status, and sign-in invitation. Money is explicitly an off-platform pledge.

[/asks/help-set-up-the-neighborhood-swap](#)

28 / Ask detail - item

Public detail shows the owner, goal, remaining amount, status, and sign-in invitation. Money is explicitly an off-platform pledge.

COMPLETED

3 items

</asks/books-for-the-little-free-library>

29 / Ask detail - money

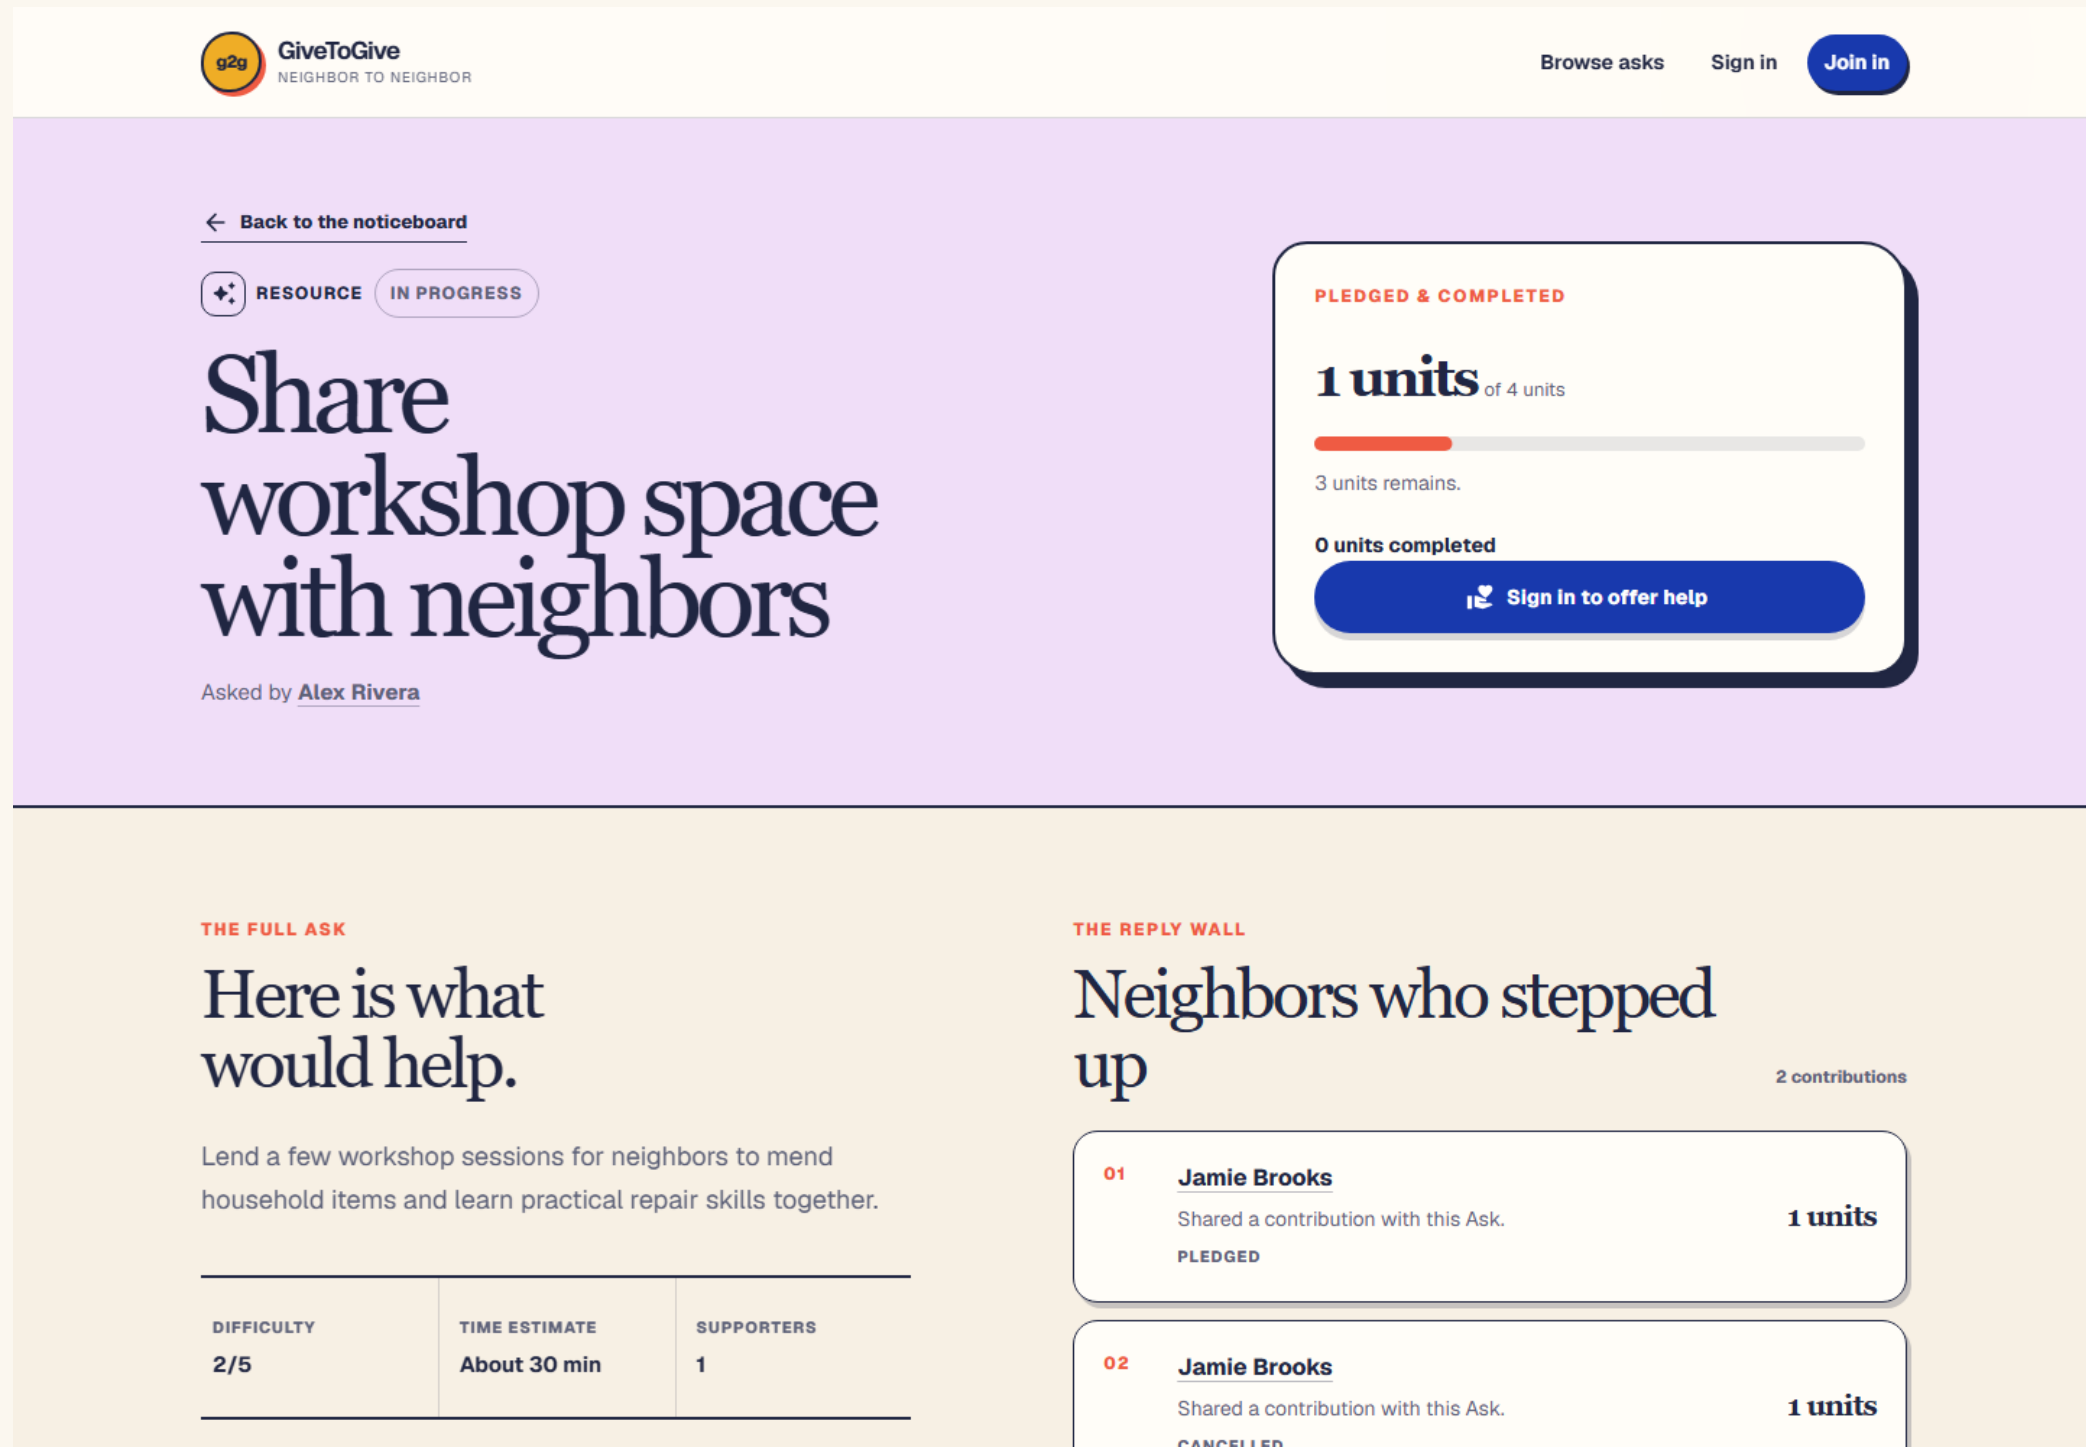

Public detail shows the owner, goal, remaining amount, status, and sign-in invitation. Money is explicitly an off-platform pledge.

/asks/repair-the-shared-garden-gate

30 / Ask detail - resource

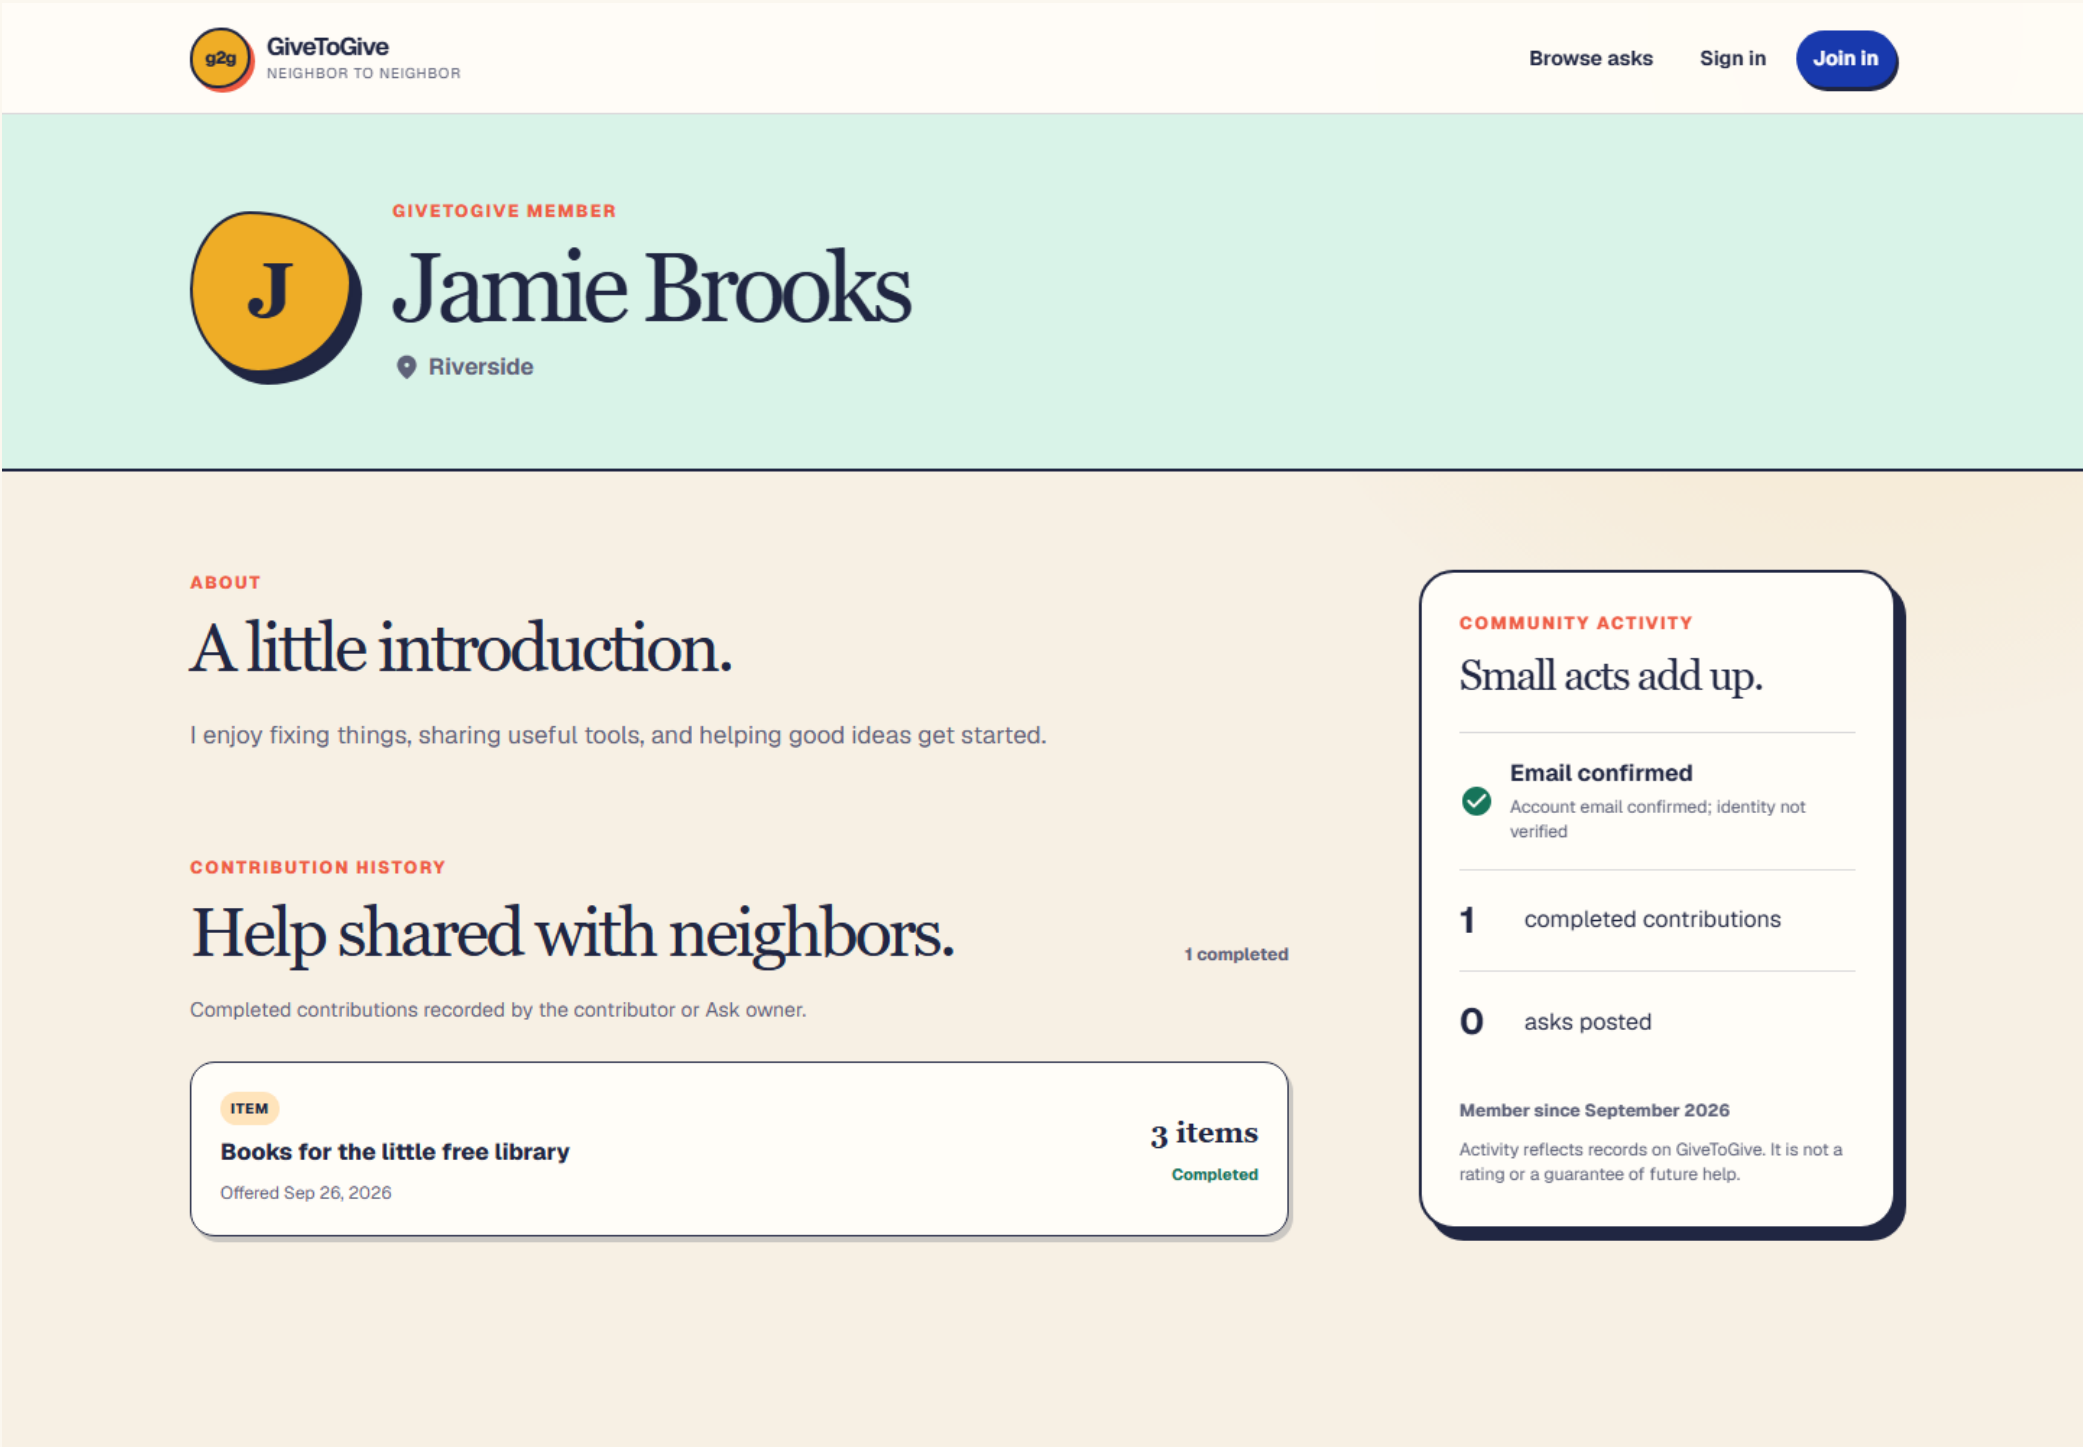

Public detail shows the owner, goal, remaining amount, status, and sign-in invitation. Money is explicitly an off-platform pledge.

[/asks/share-workshop-space-with-neighbors](#)

31 / Member - public profile

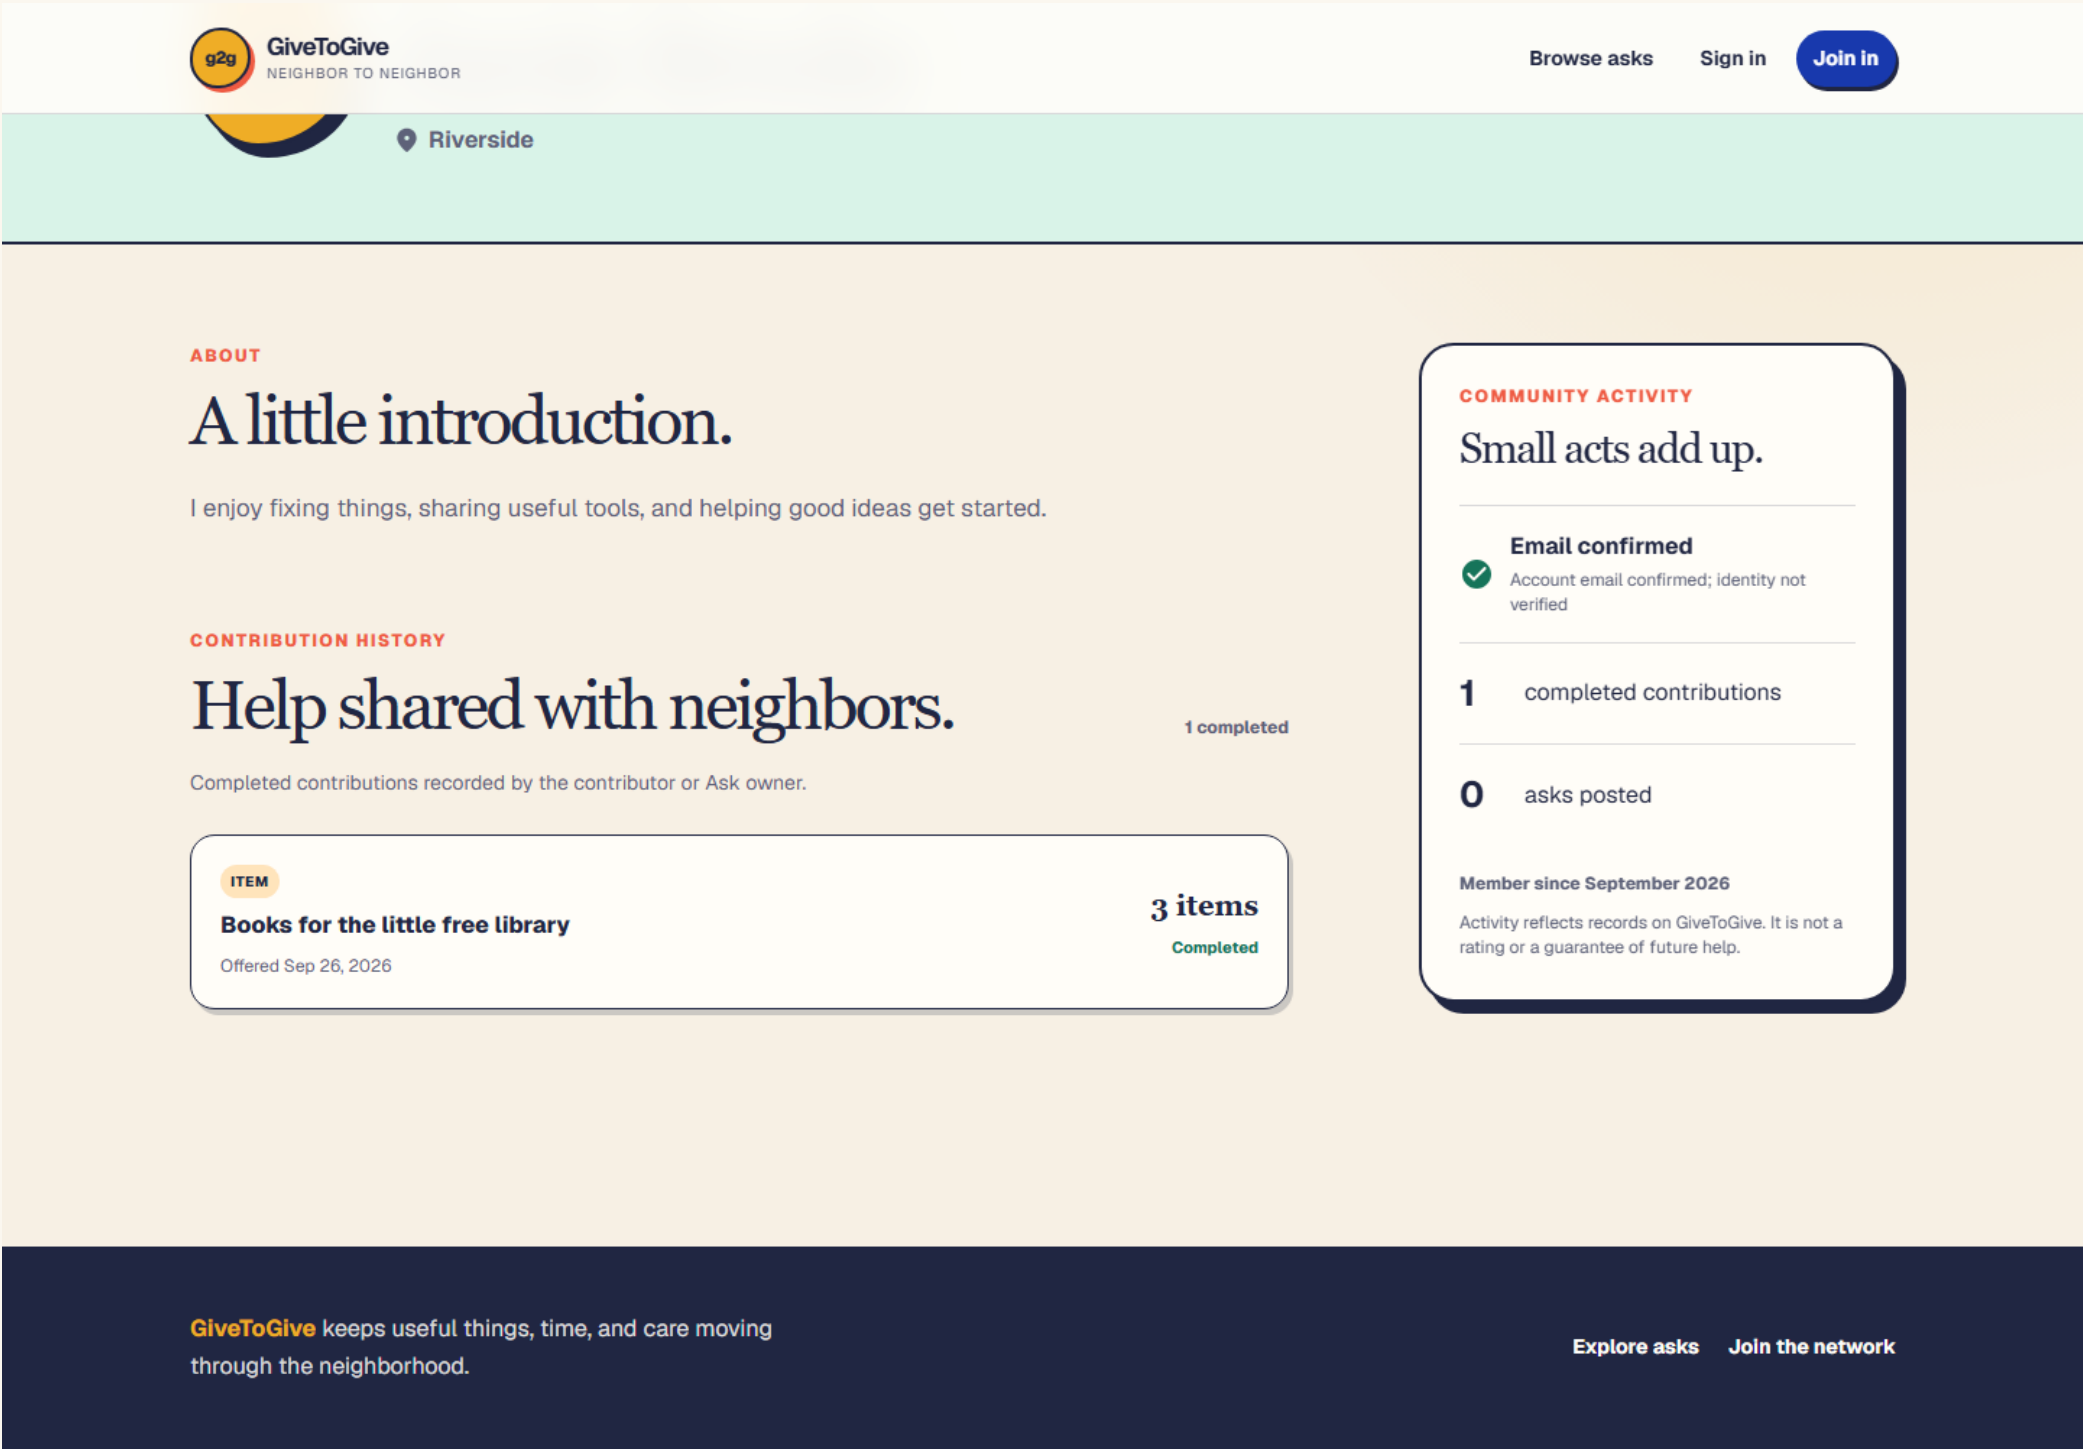

A public introduction, approximate location, honest trust signals, and completed contribution history.

/members/22899315-cbf6-46d5-b00a-ccb2e2763f2e

32 / Member - public contribution history

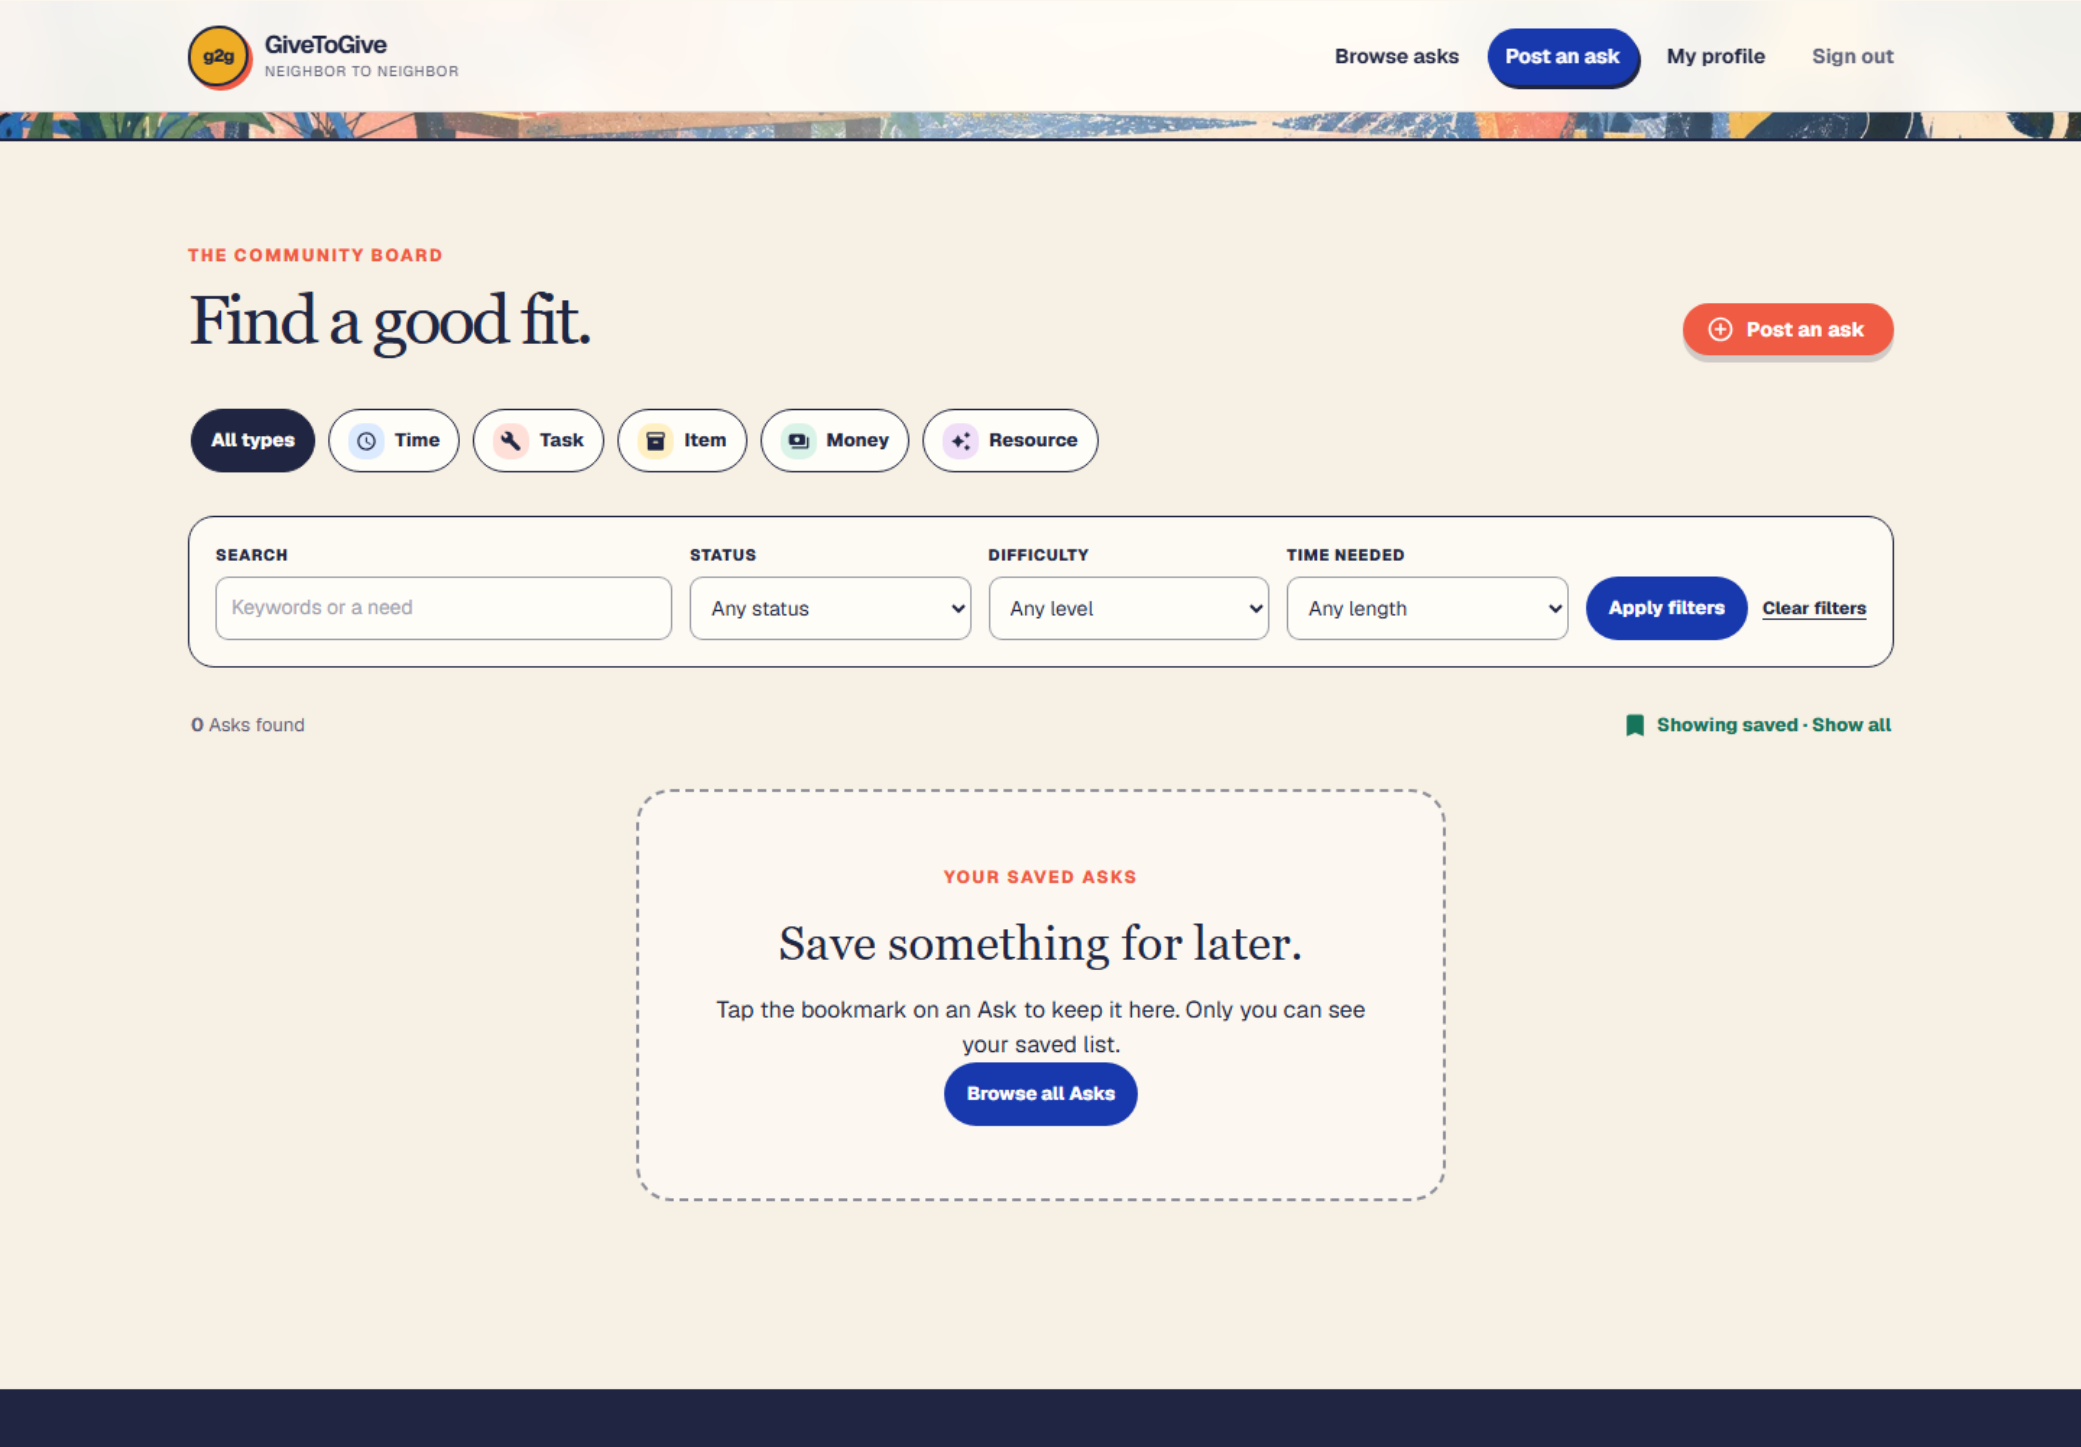

Only completed contributions appear on the public profile; no email, pending offers, or cancelled offers are exposed here.

[/members/22899315-cbf6-46d5-b00a-ccb2e2763f2e](#)

33 / Saved Asks - empty member list

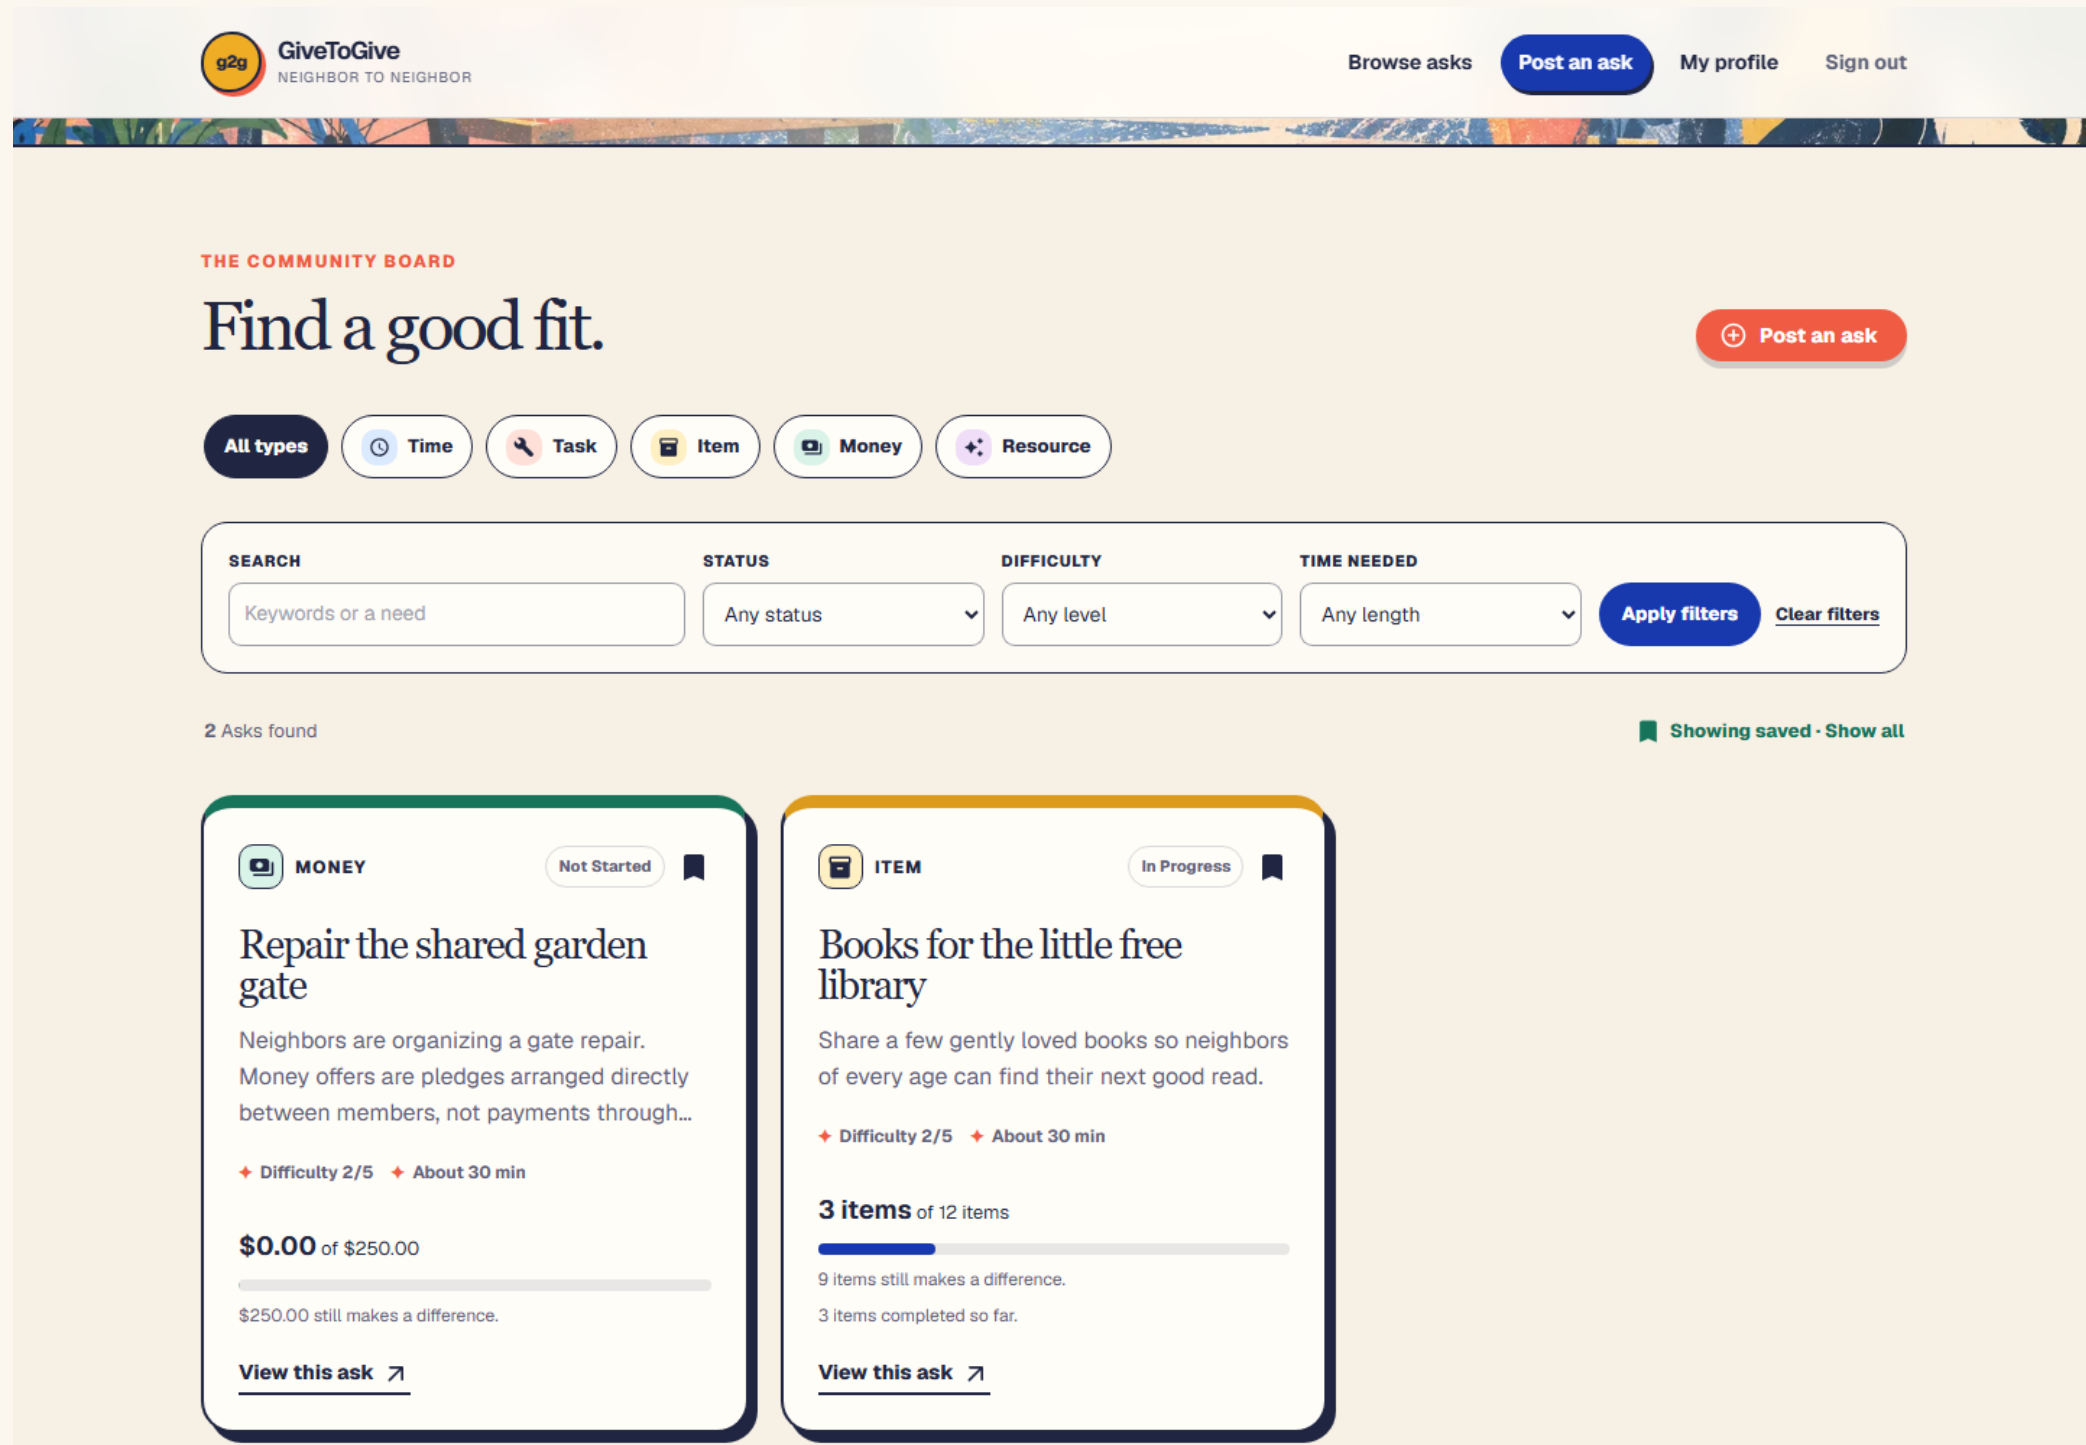

An account starts with an empty saved list and instructions for bookmarking.

/asks?saved=1

34 / Saved Asks - personal collection

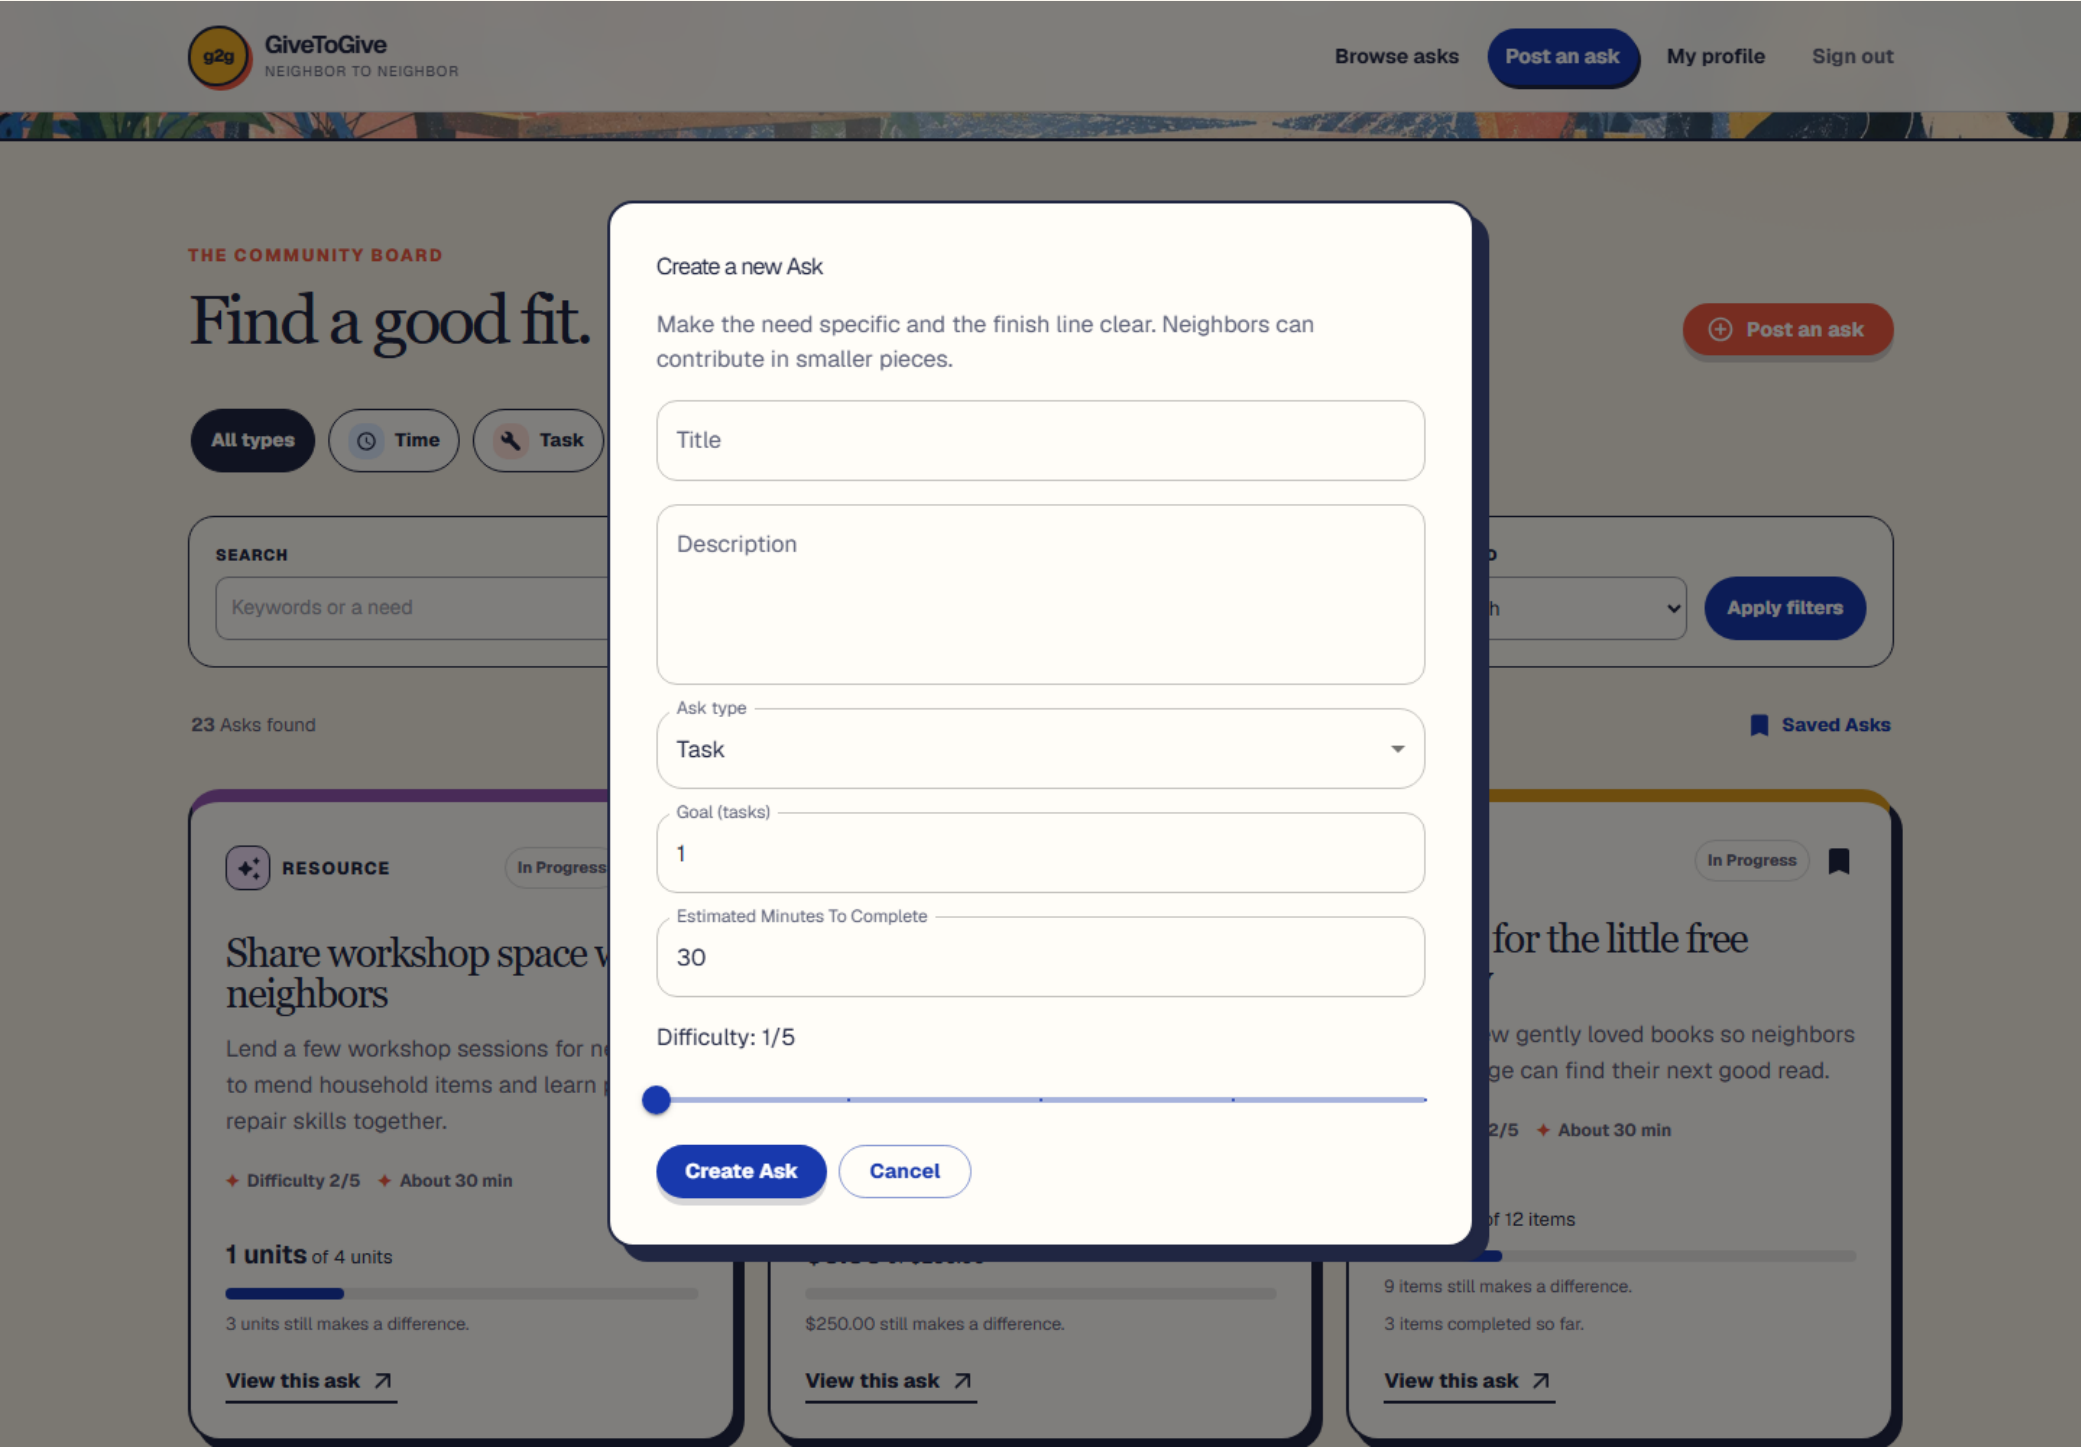

Bookmarks persist across visits and remain visible only to the member who saved them.

/asks?saved=1

35 / Create Ask - task form

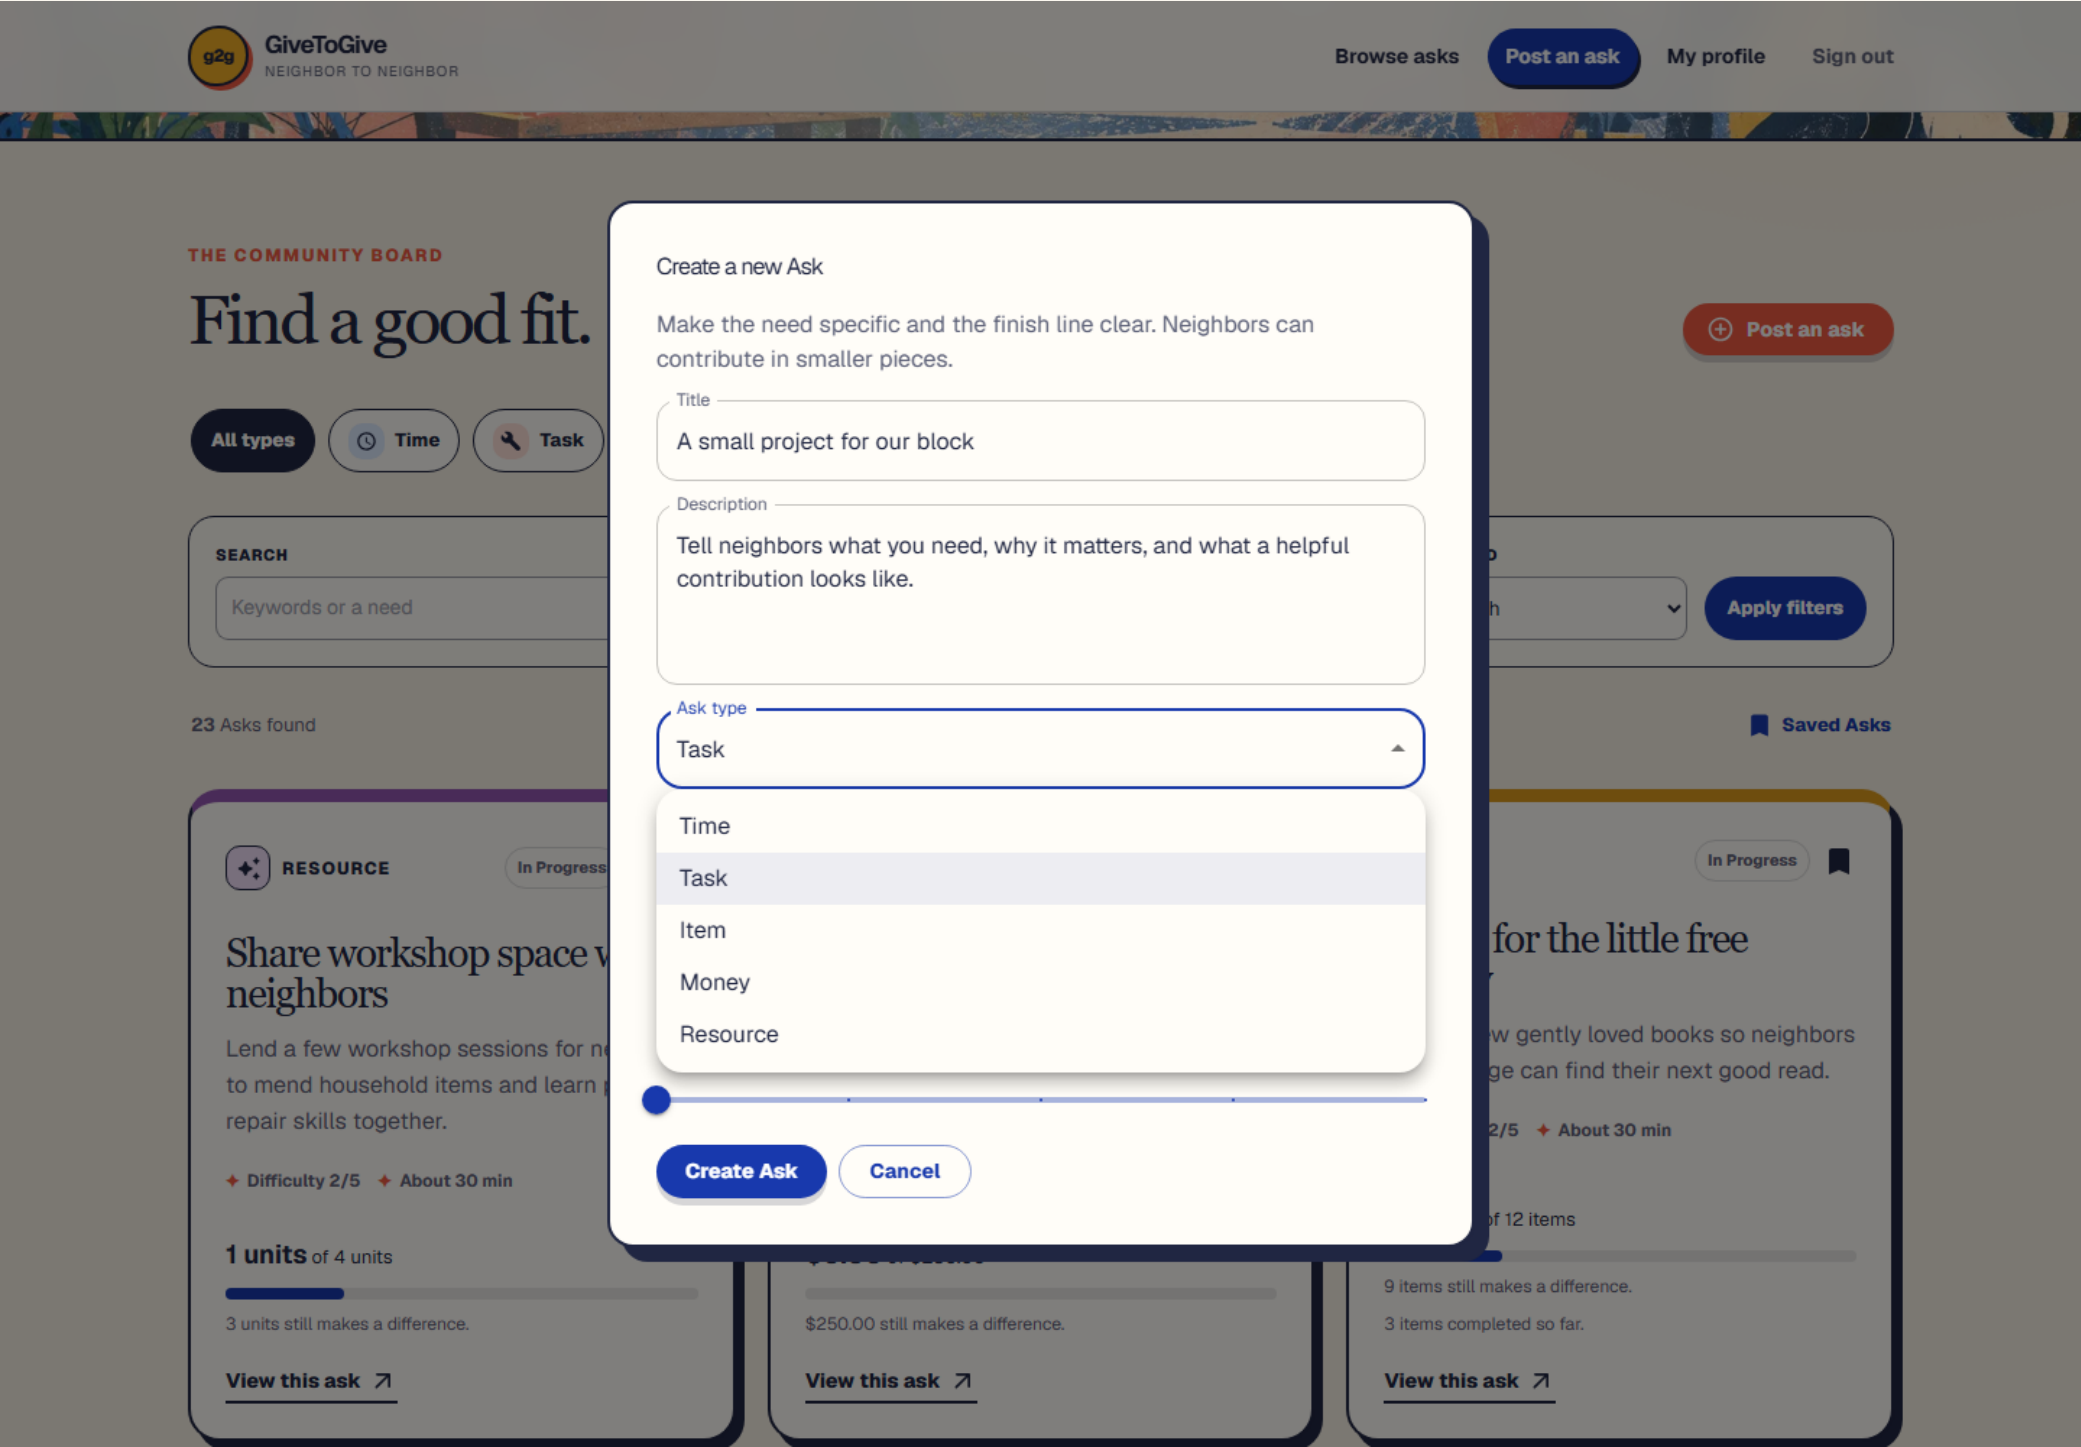

The creation dialog gathers title, description, goal, time estimate, and difficulty.

/asks

36 / Create Ask - type chooser

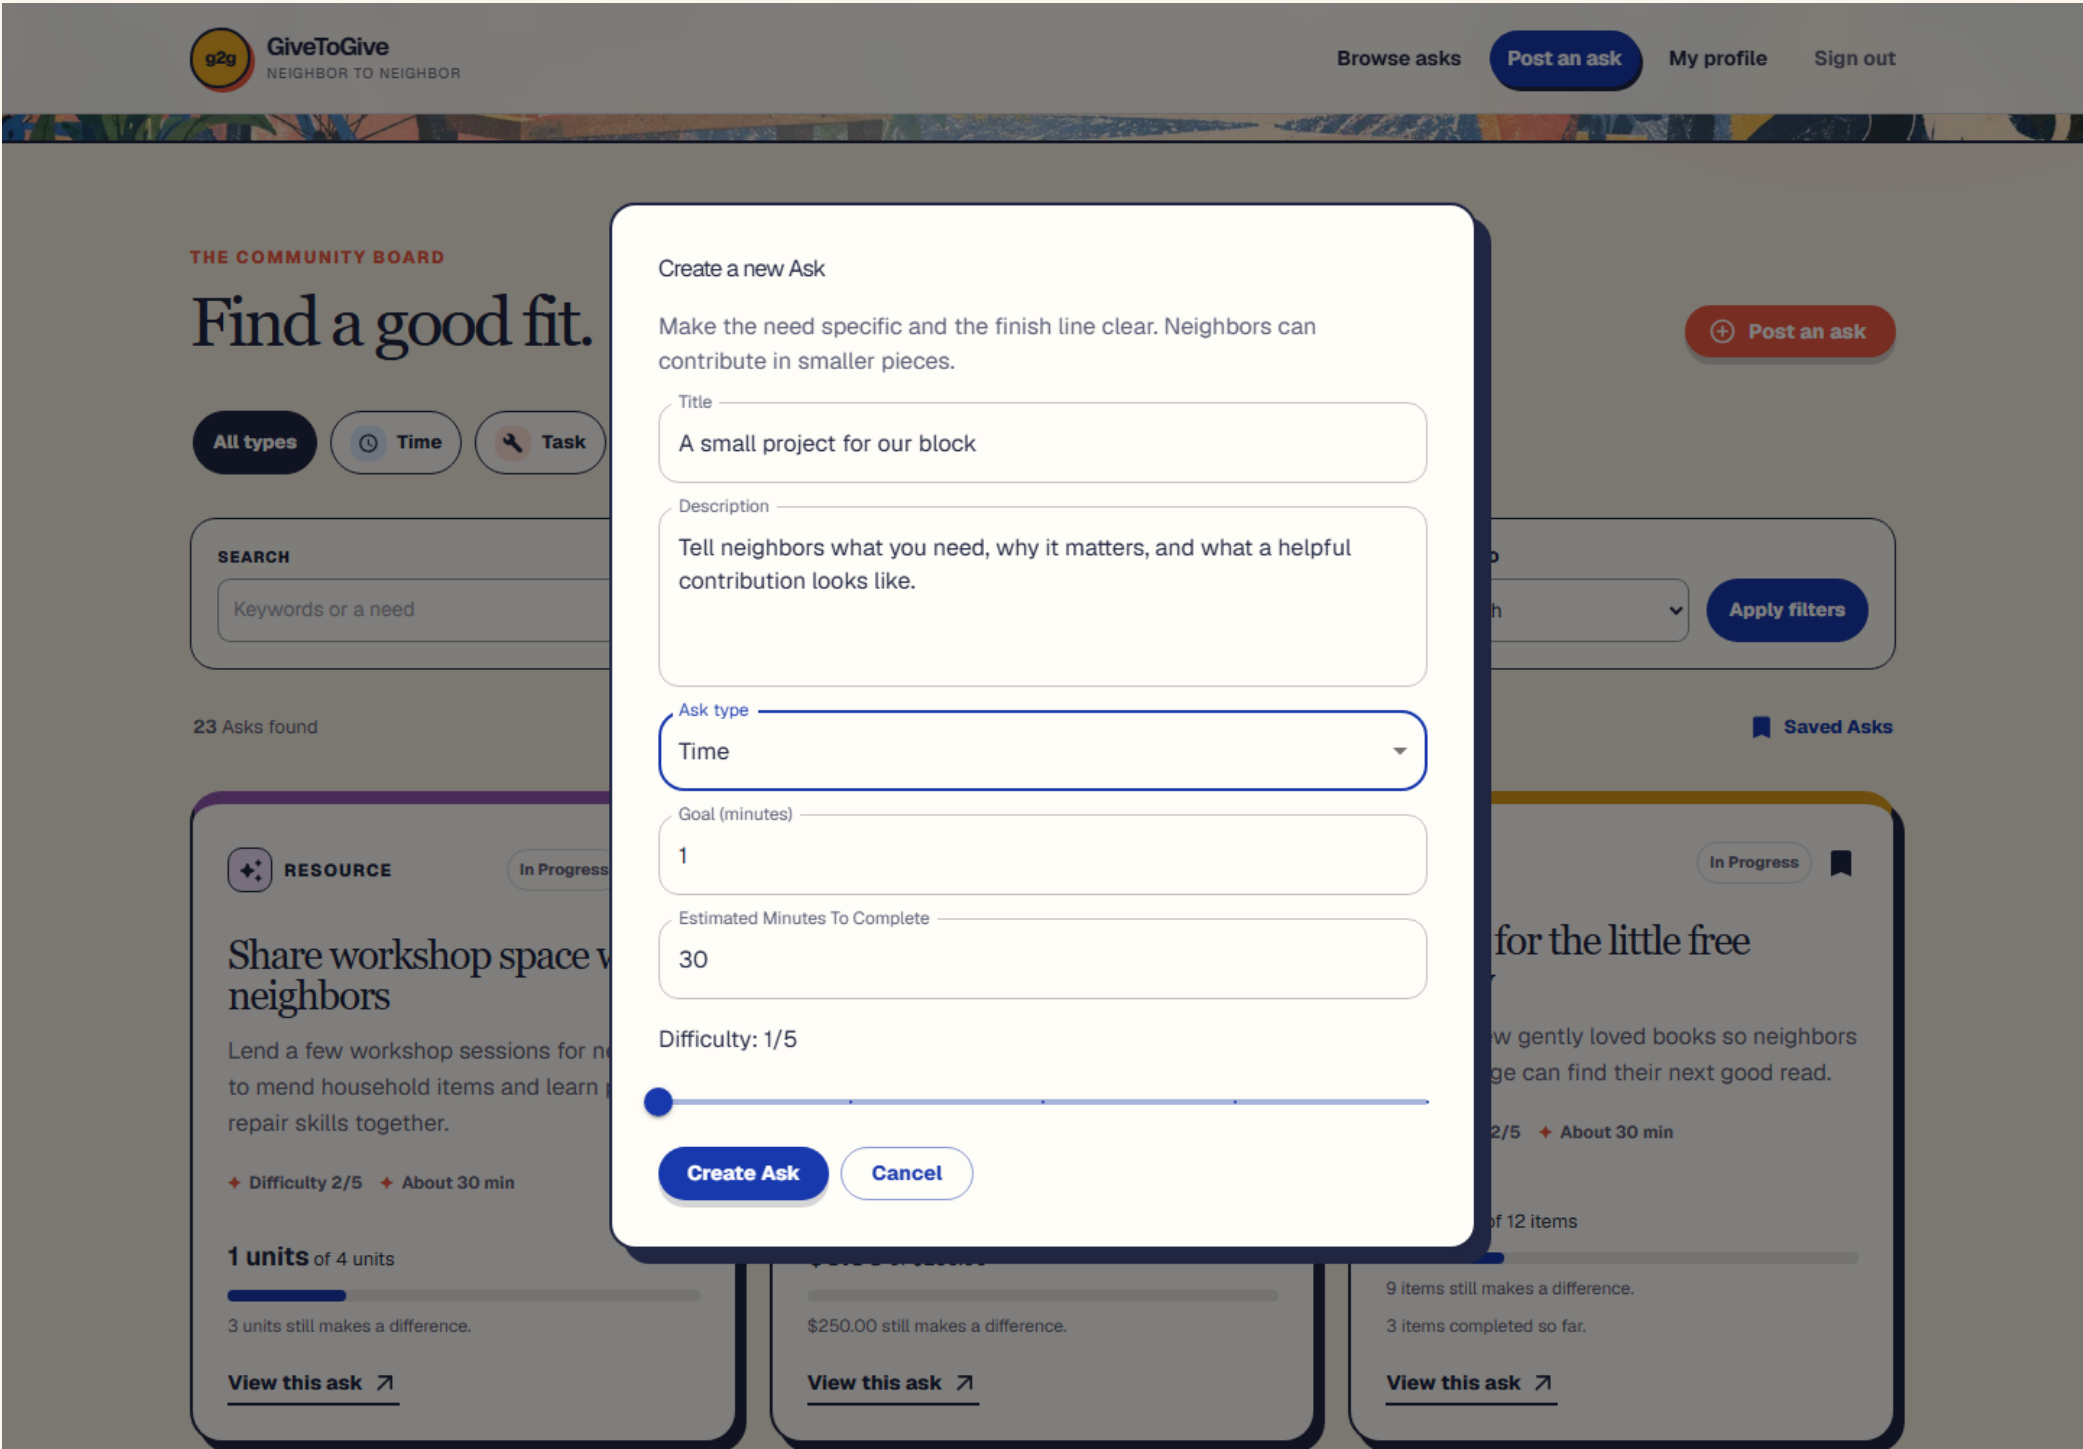

Choose time, task, item, money, or resource.

/asks

37 / Create Ask - time goal

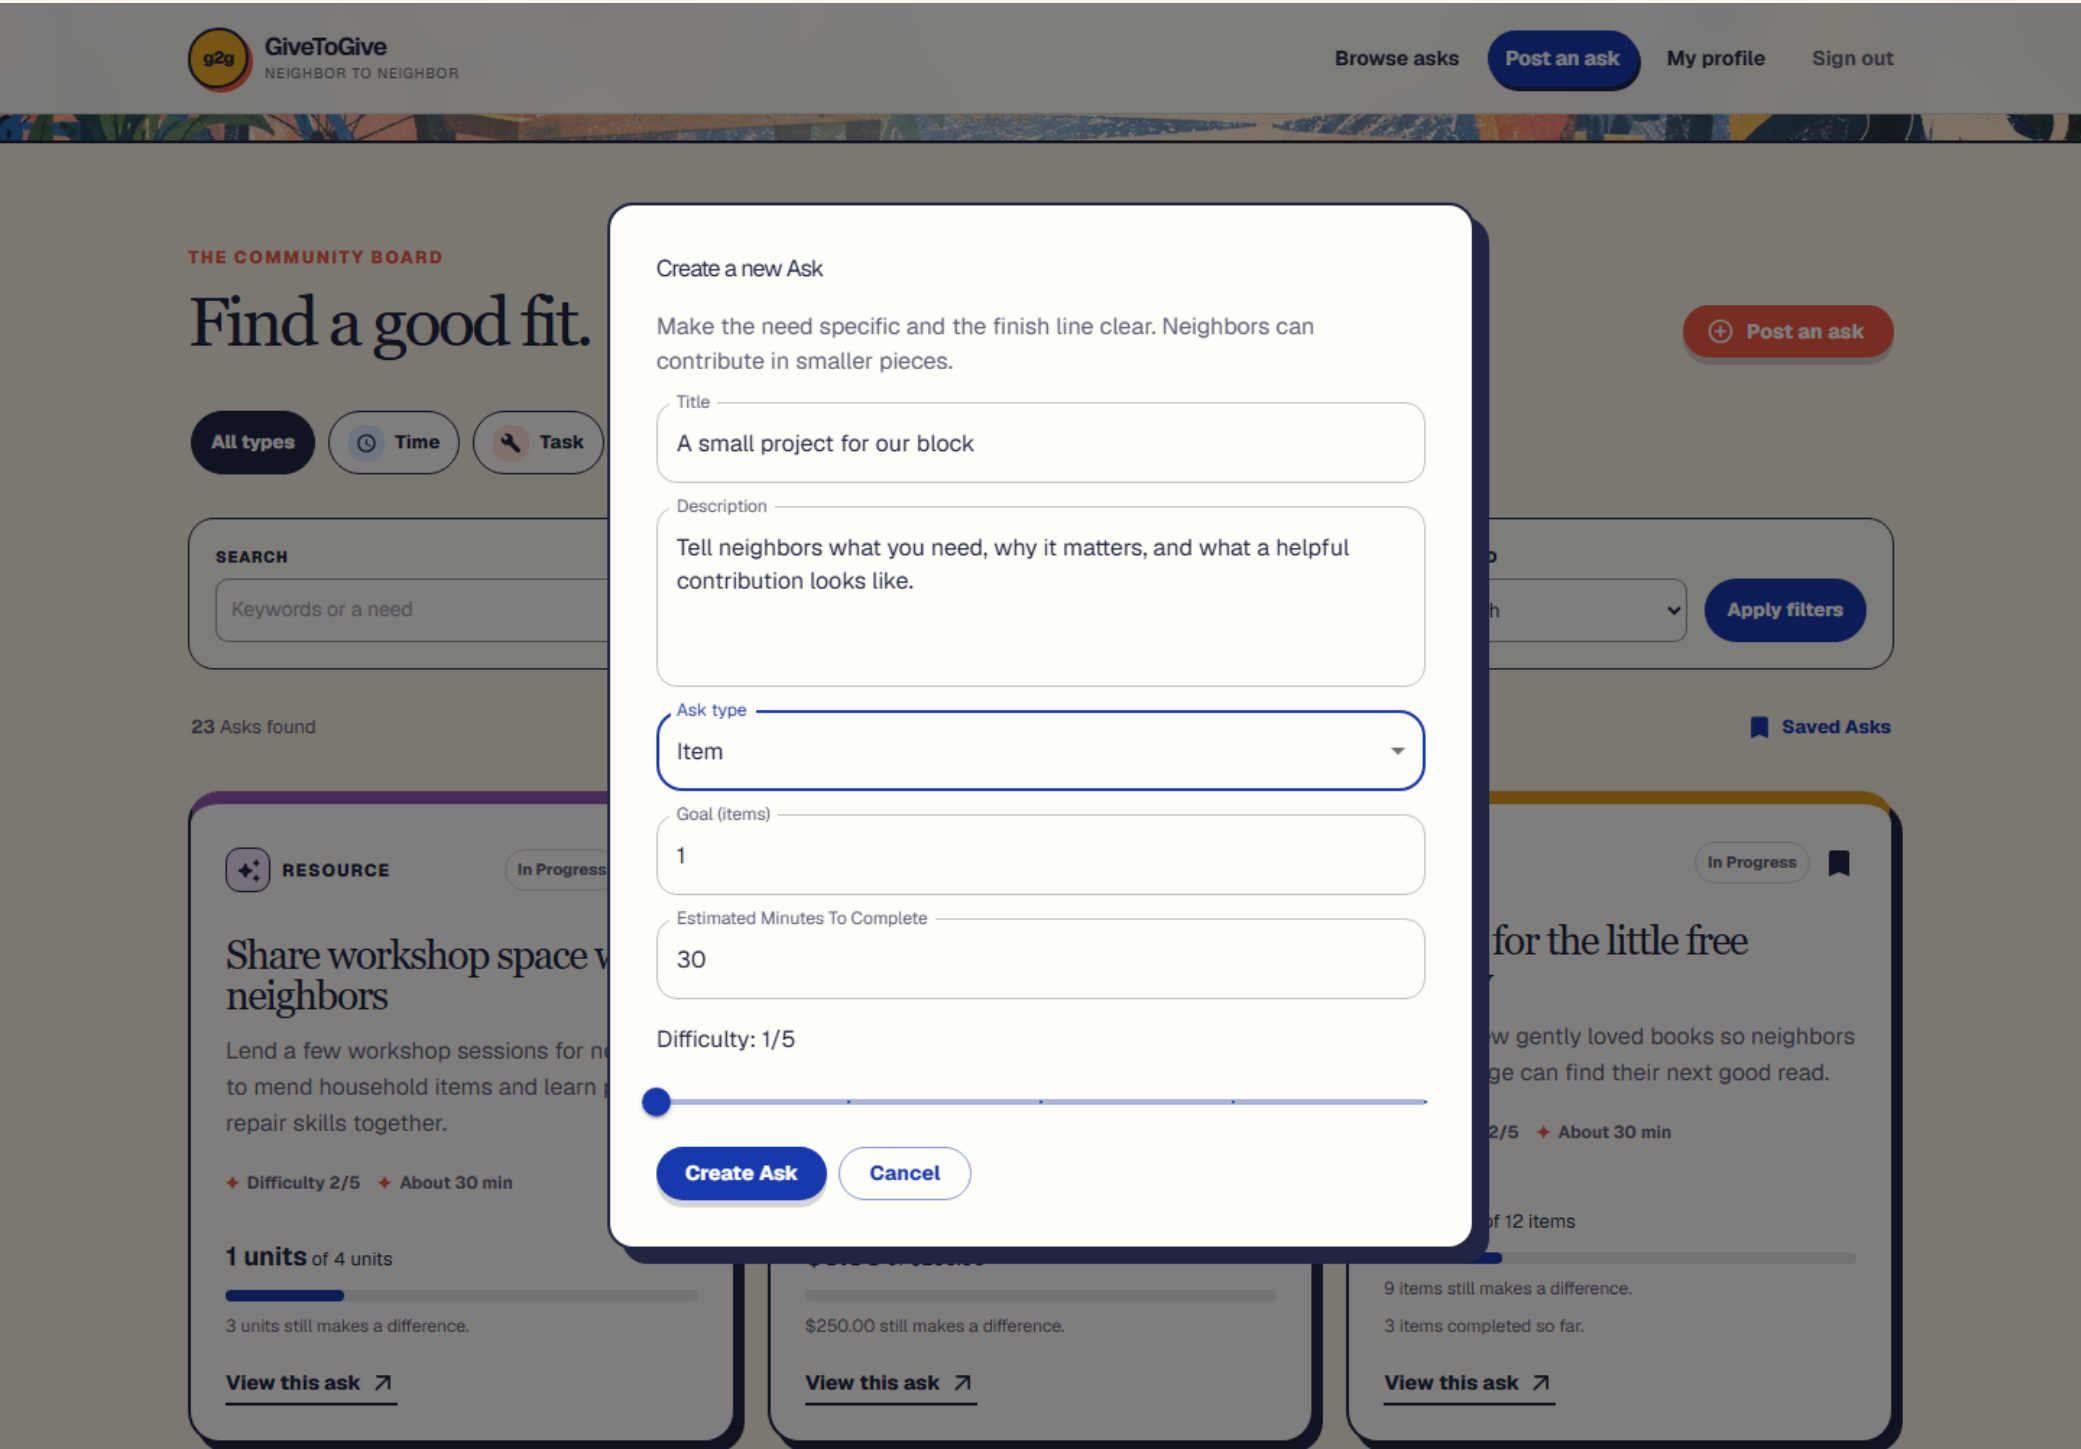

Time asks measure their goal in whole minutes.

/asks

38 / Create Ask - item goal

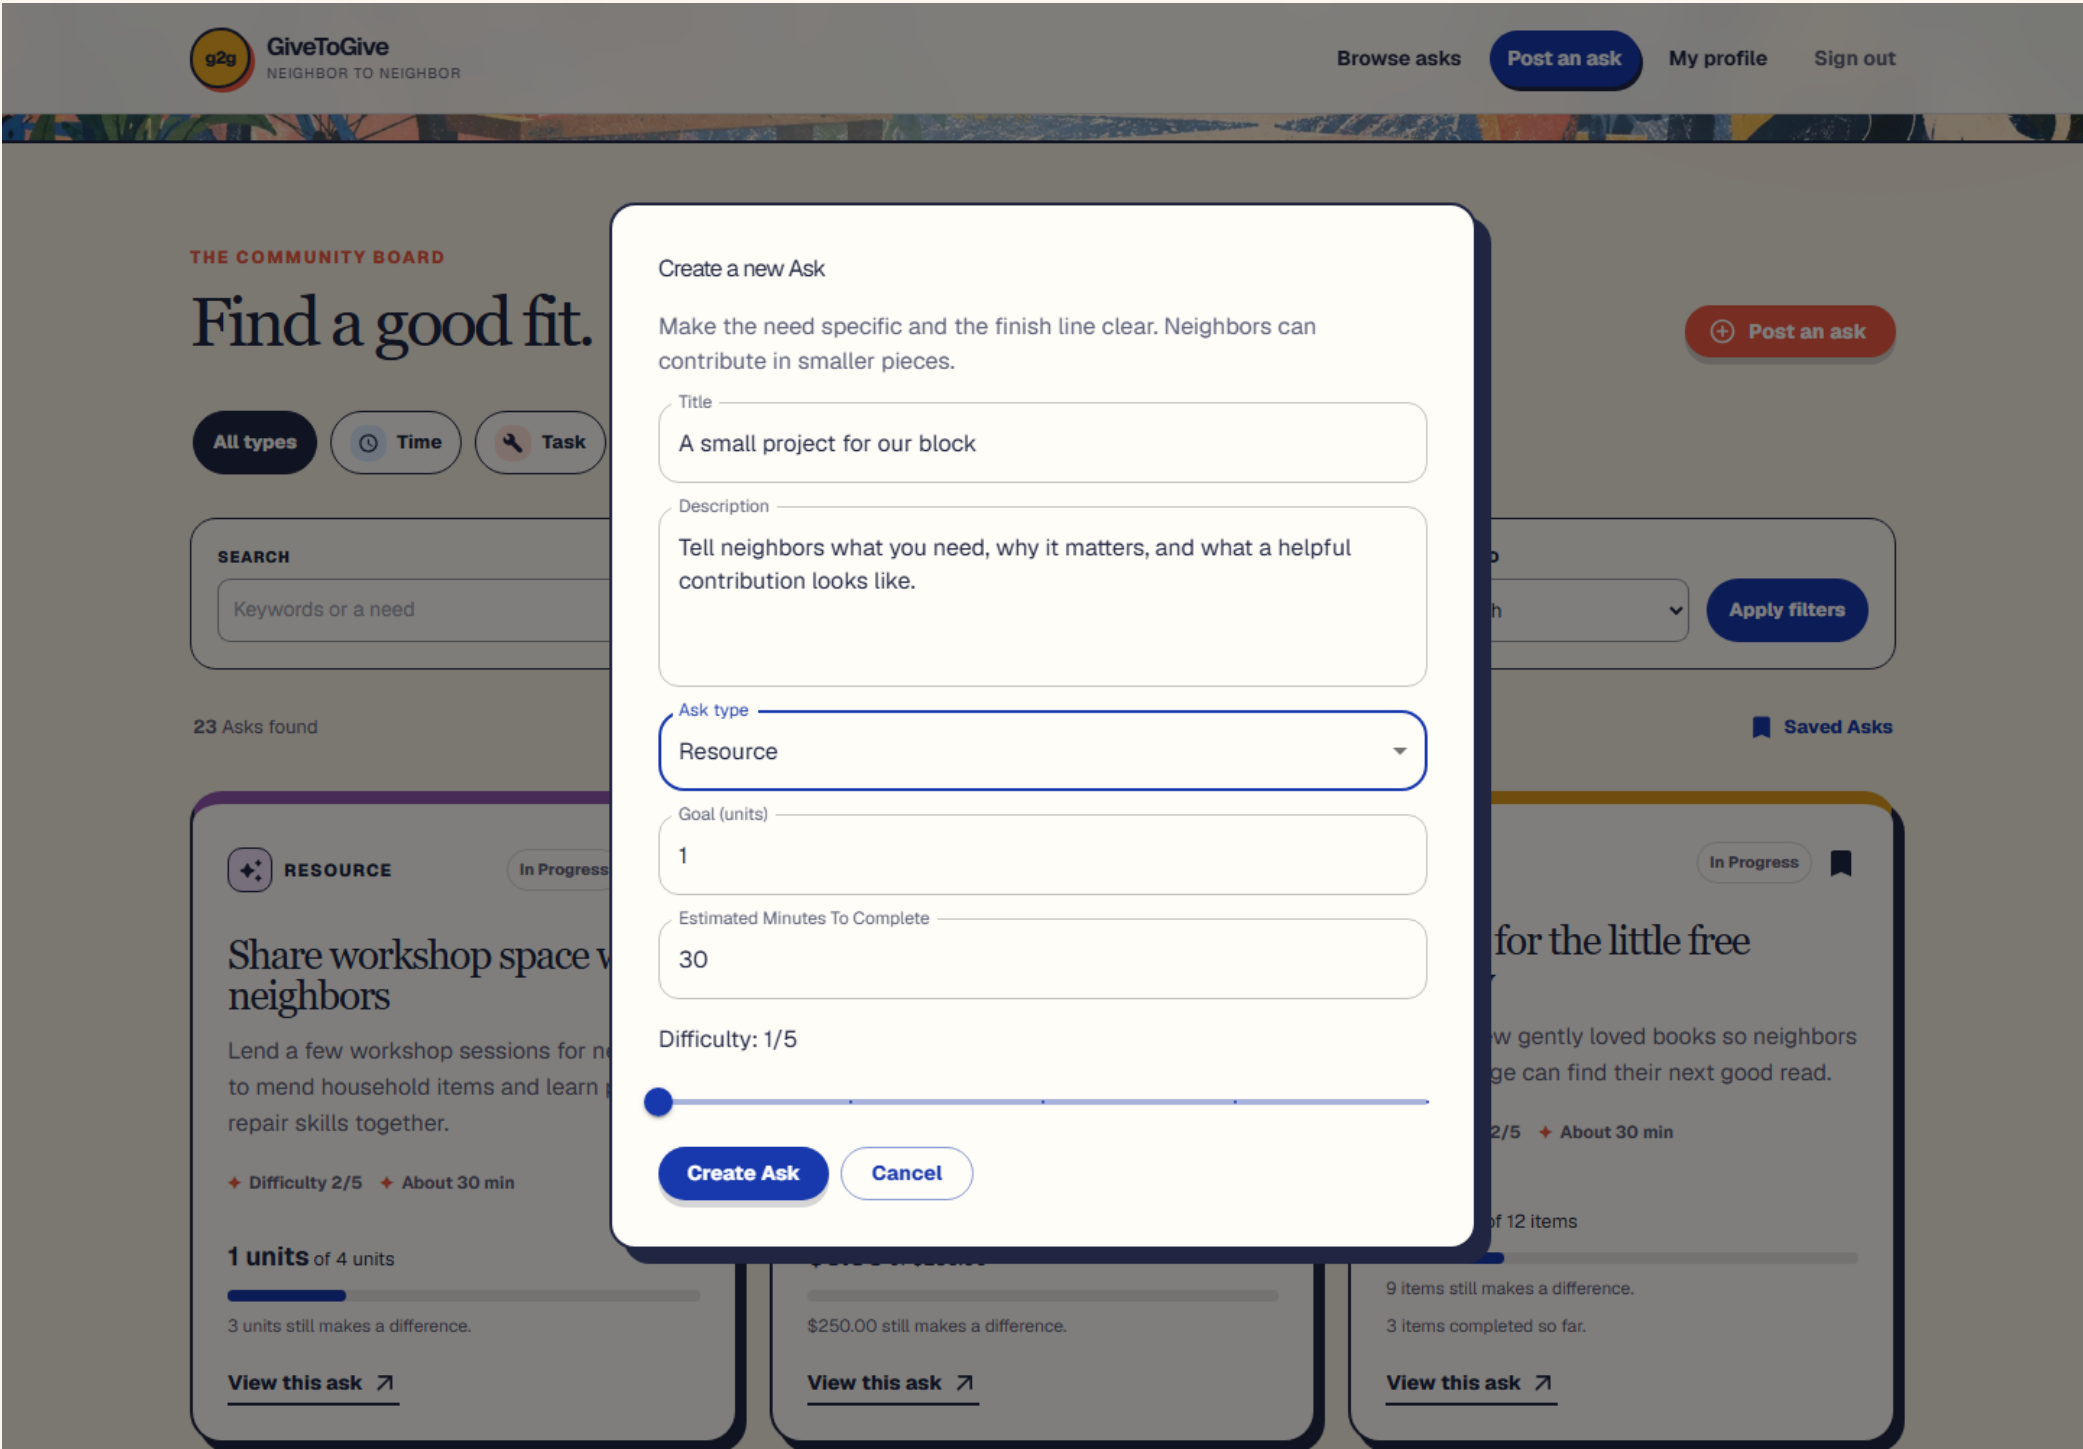

Item goals use whole units and support partial contributions.

/asks

39 / Create Ask - resource goal

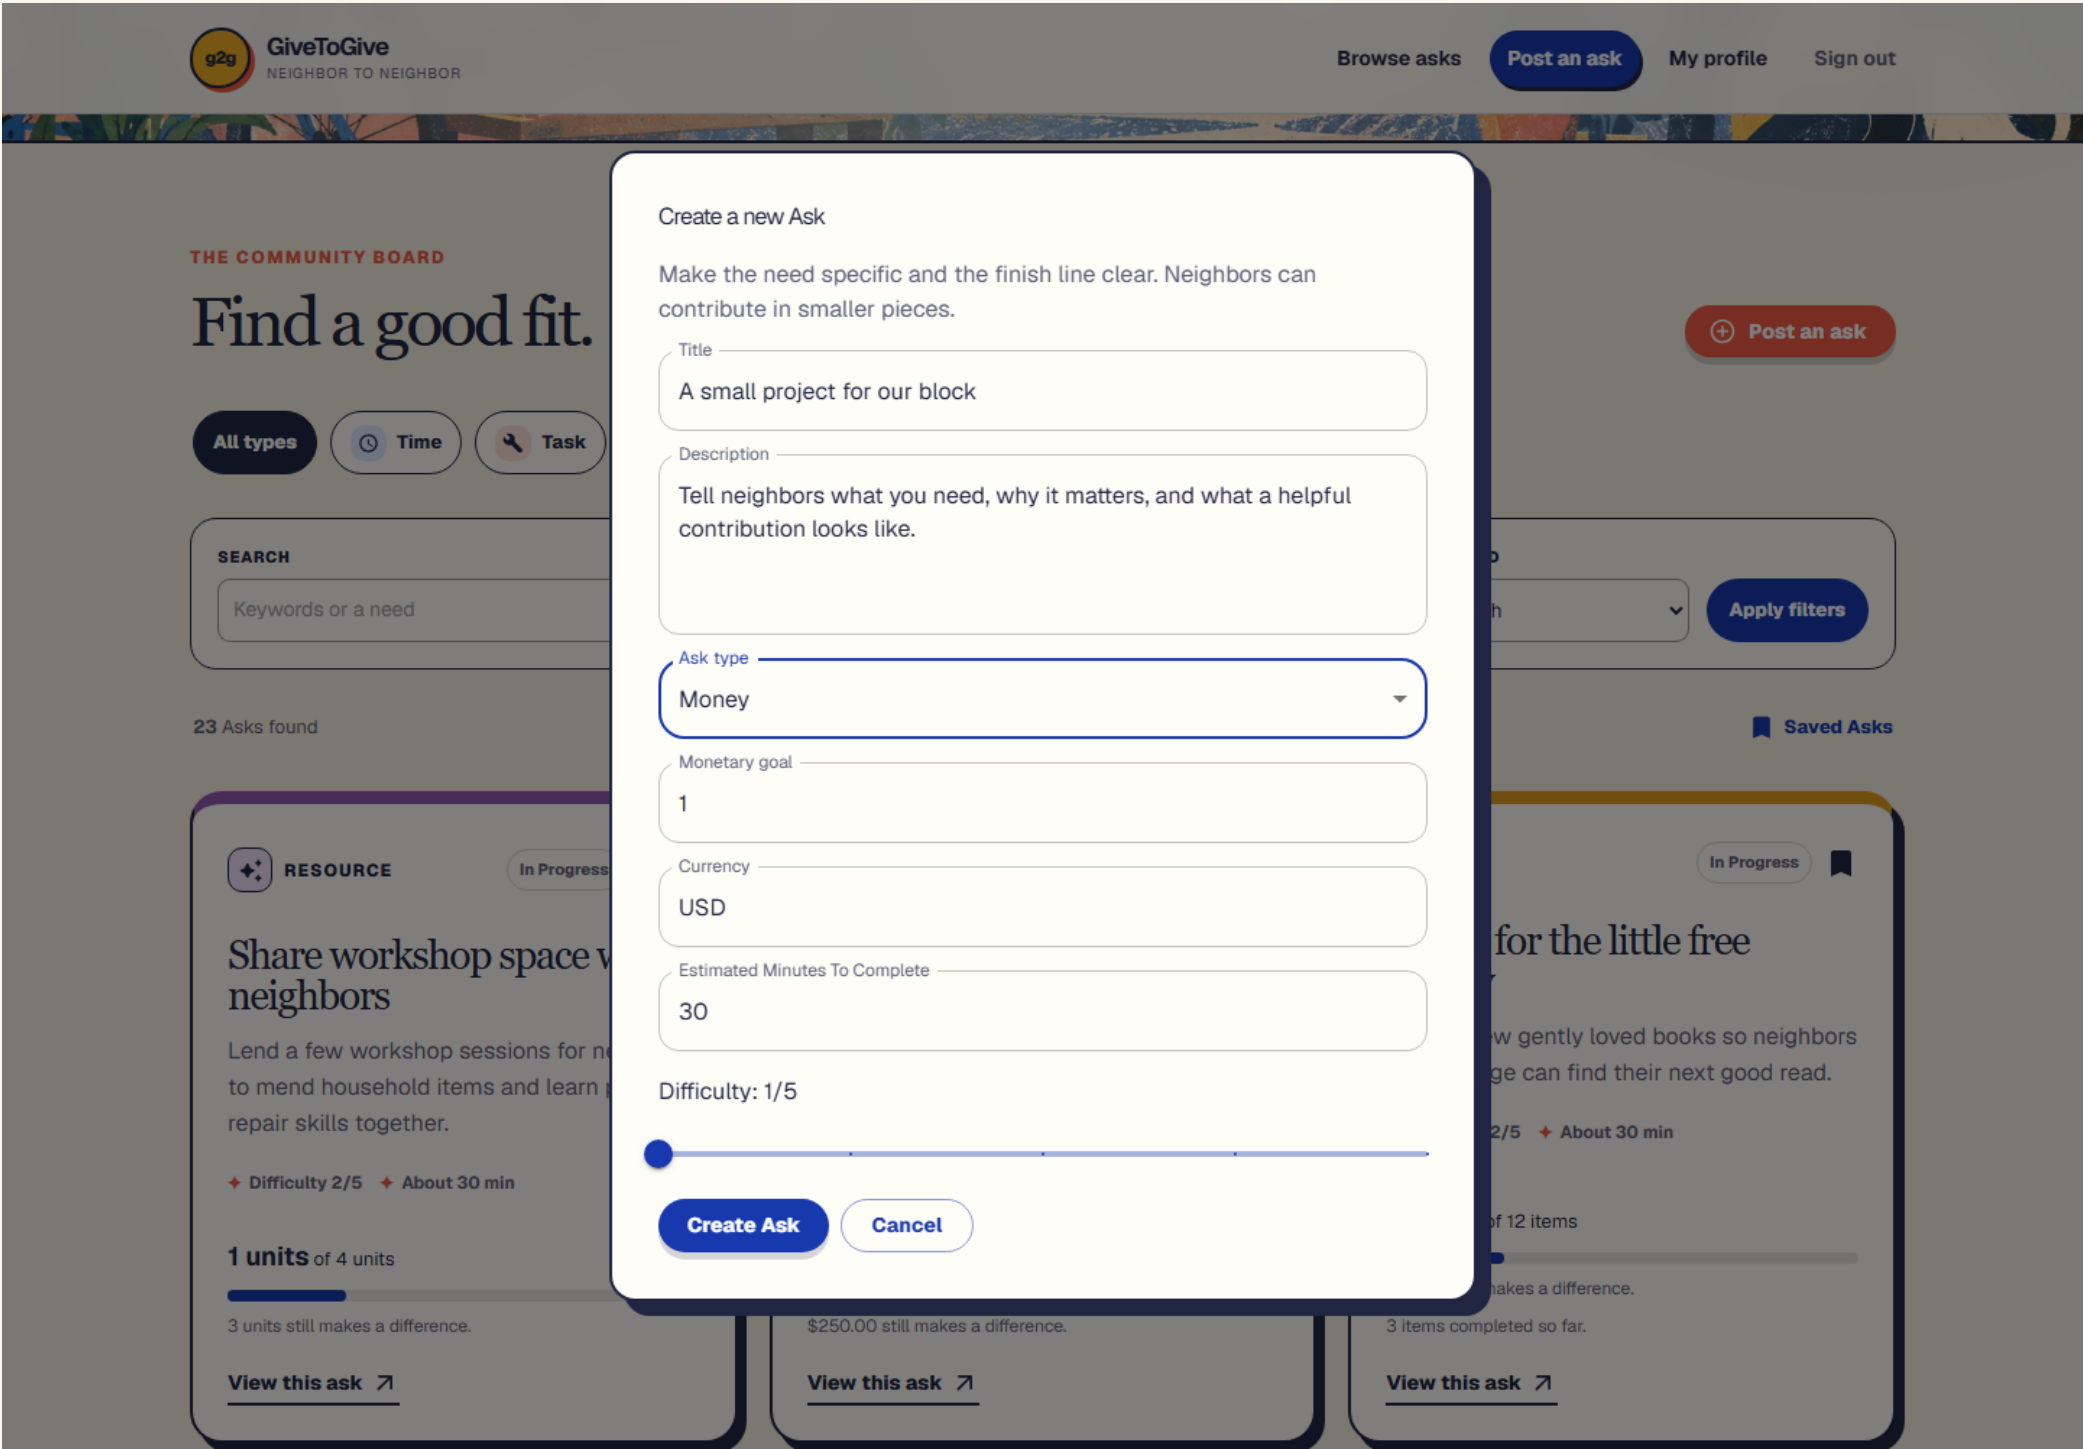

Resource goals use whole units and support partial contributions.

/asks

40 / Create Ask - money goal

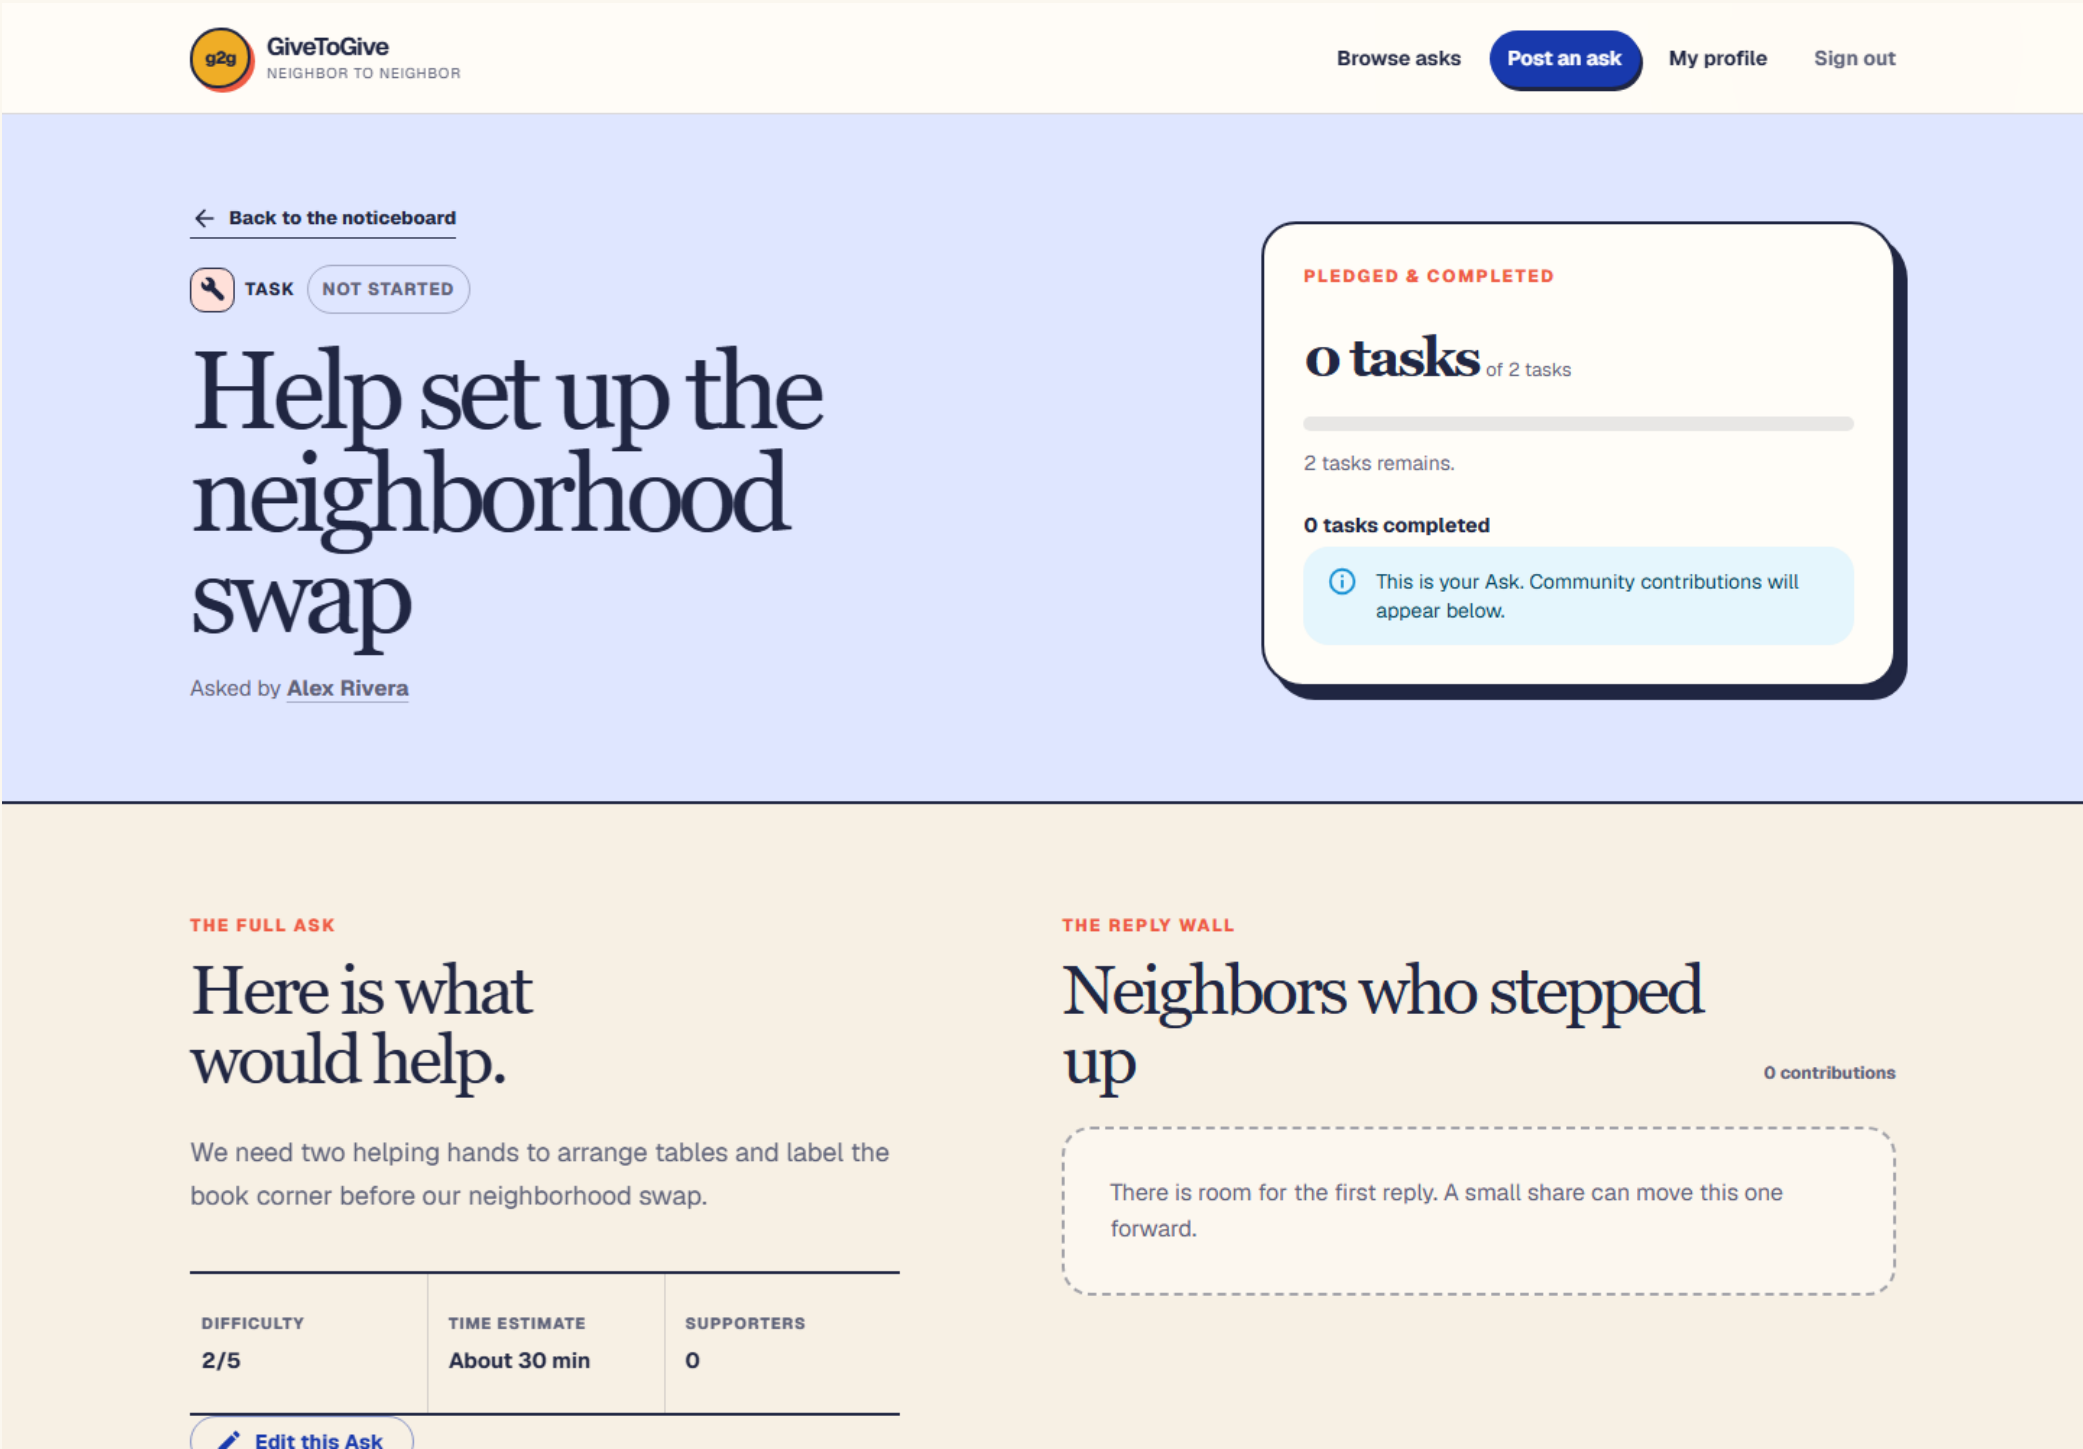

Money goals support currency and decimal amounts; this does not initiate a payment.

/asks

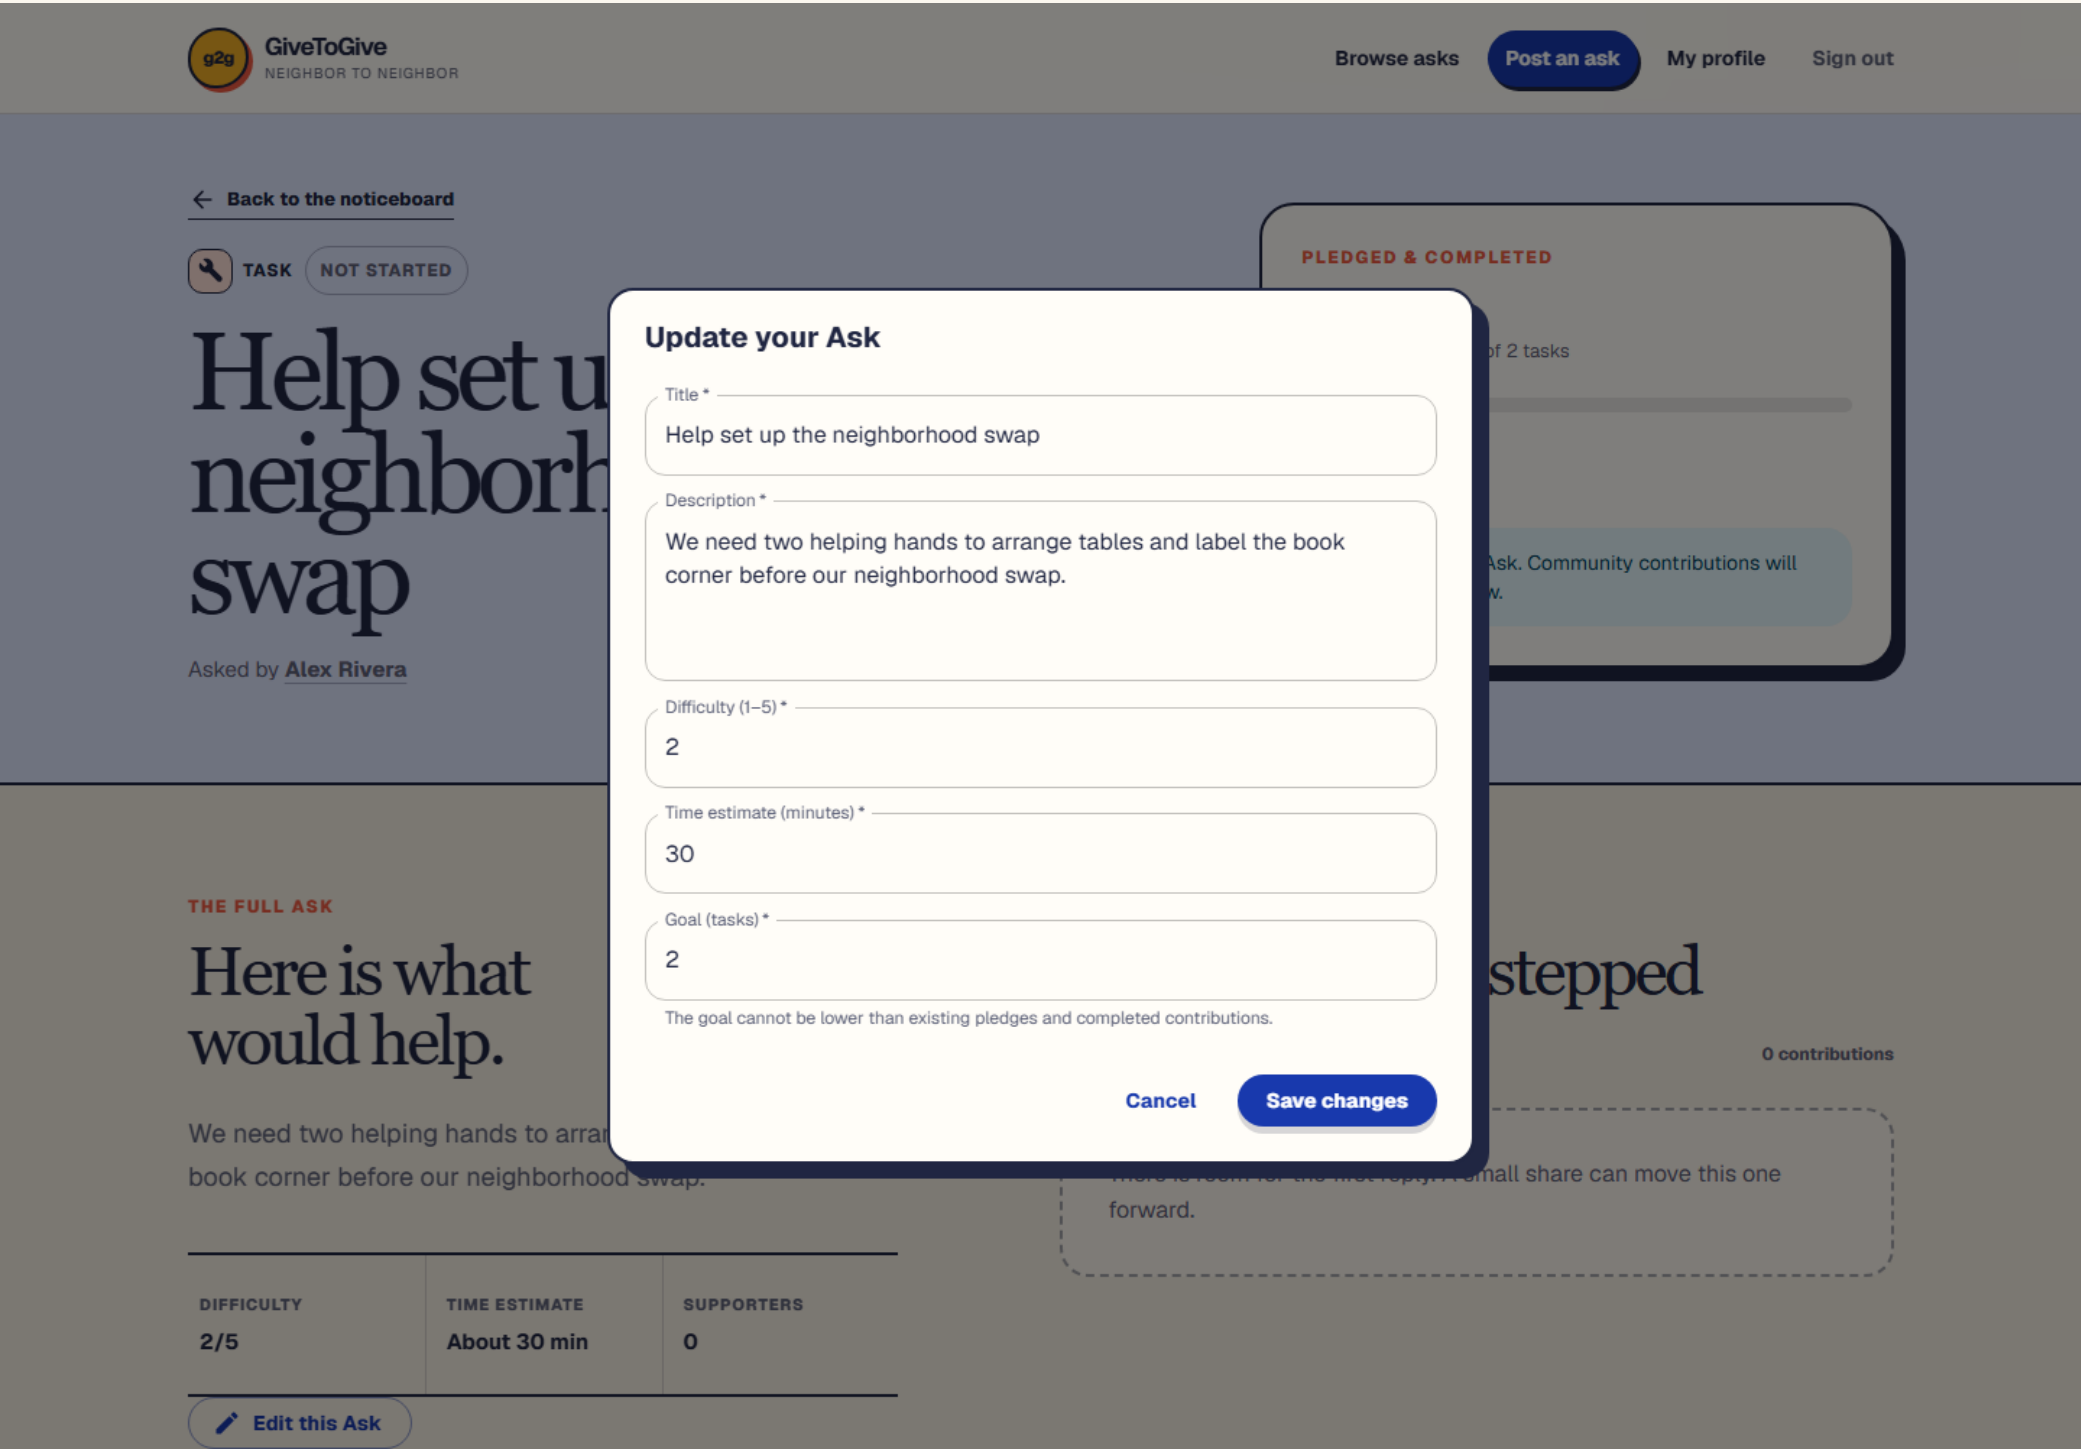

41 / Ask owner - own detail

An owner sees the request as theirs and cannot contribute to their own Ask.

[/asks/help-set-up-the-neighborhood-swap](#)

42 / Ask owner - edit dialog

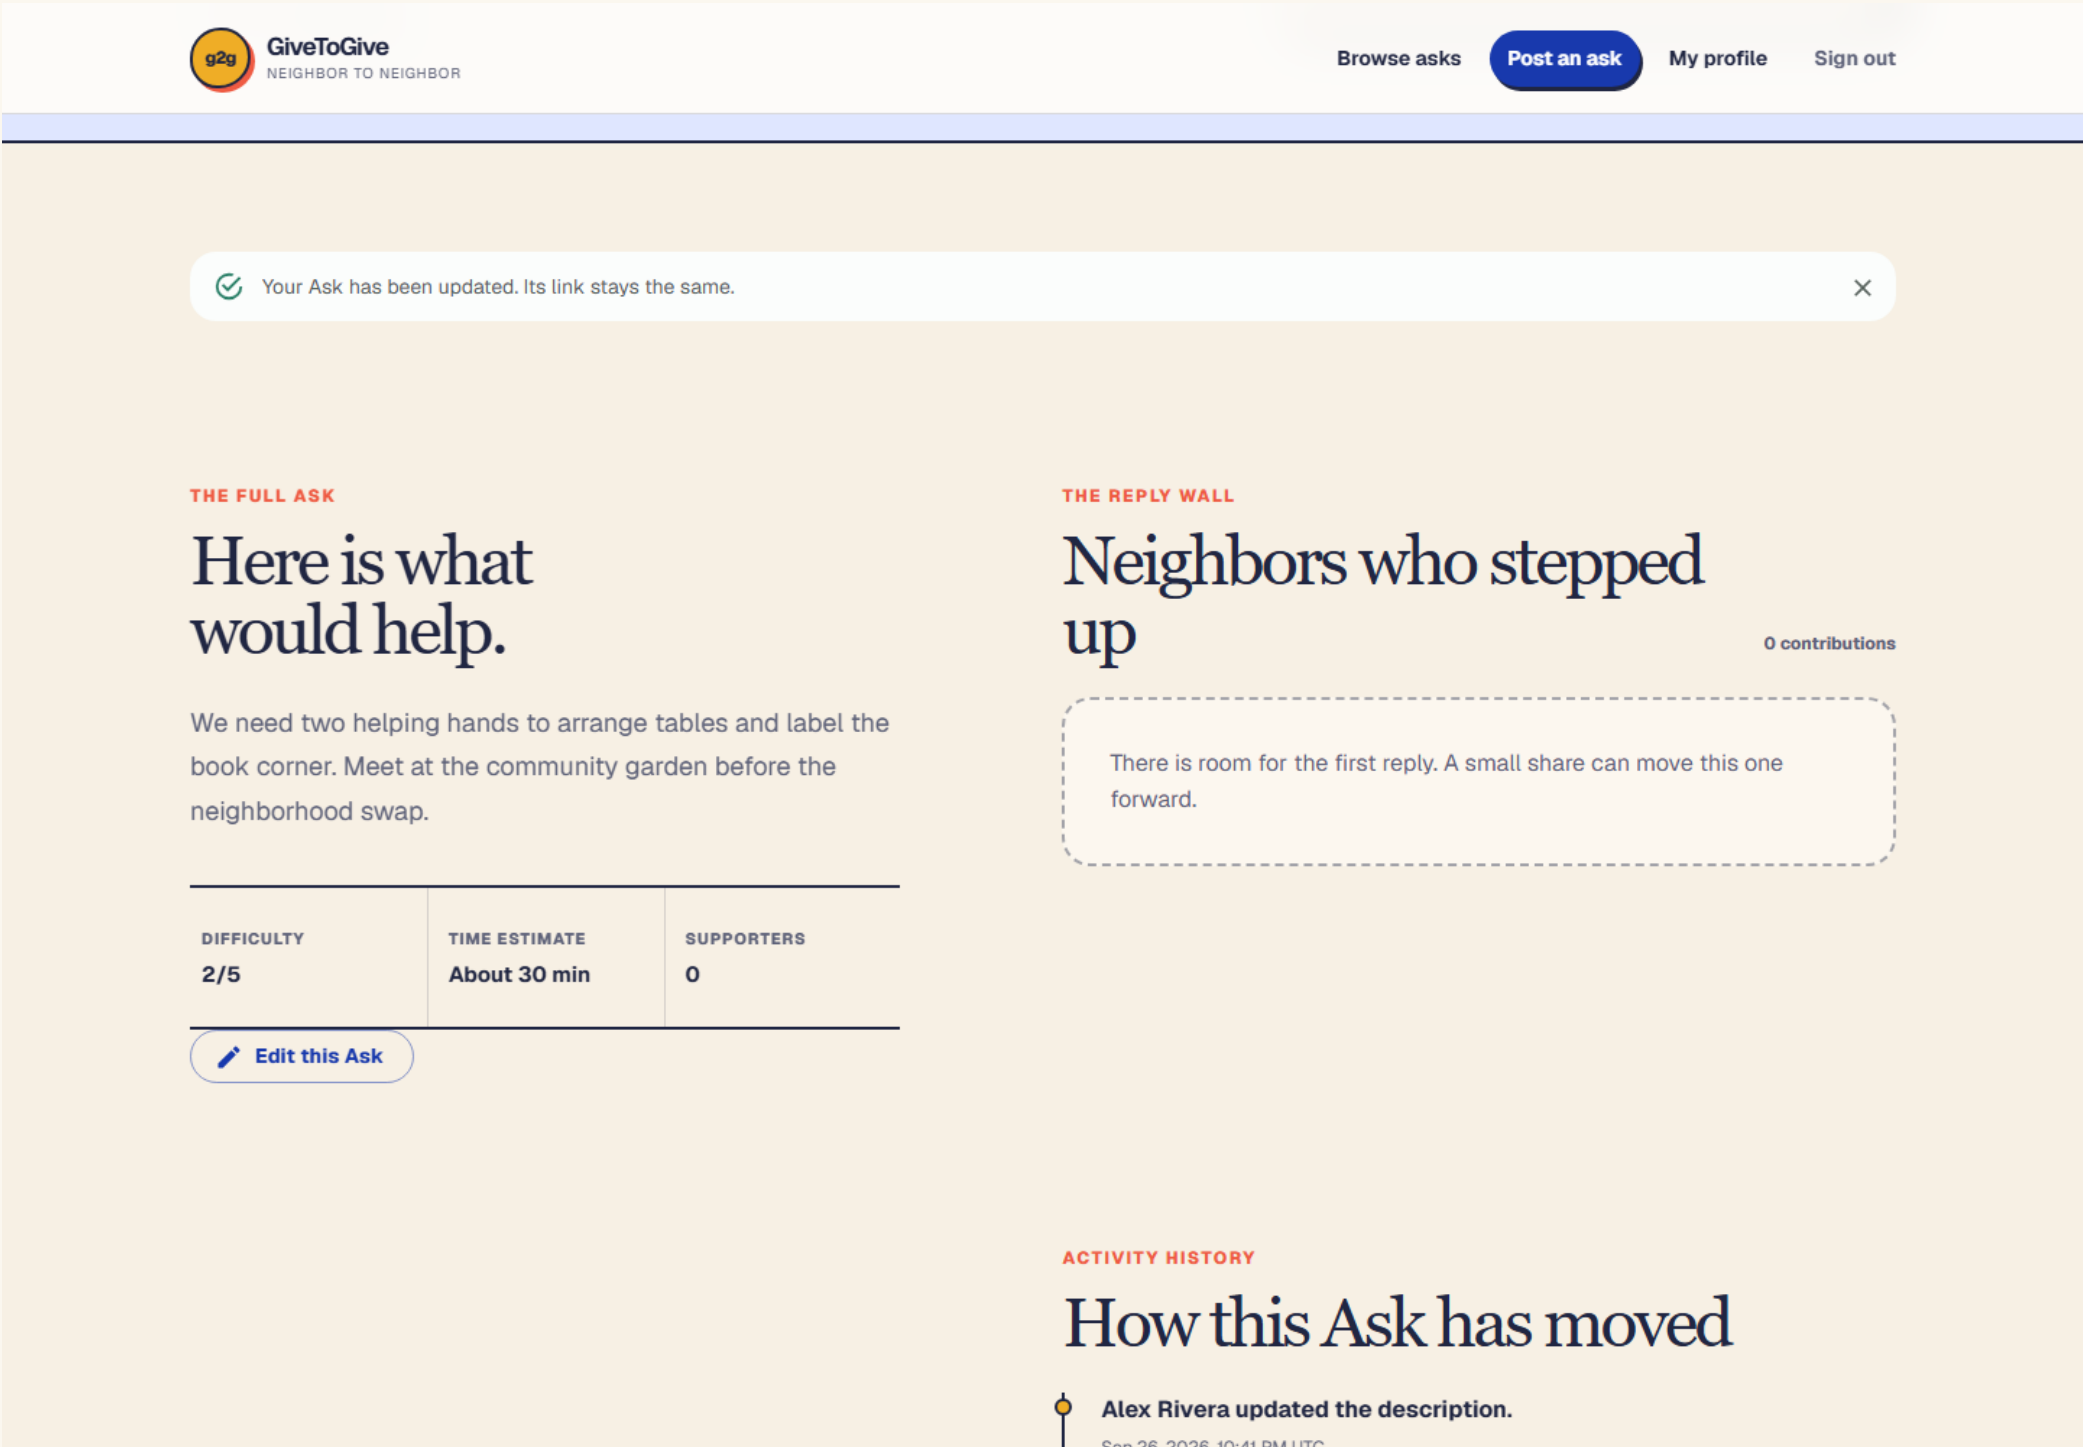

Owners can revise details and goals while preserving the existing public link and pledged capacity.

/asks/help-set-up-the-neighborhood-swap

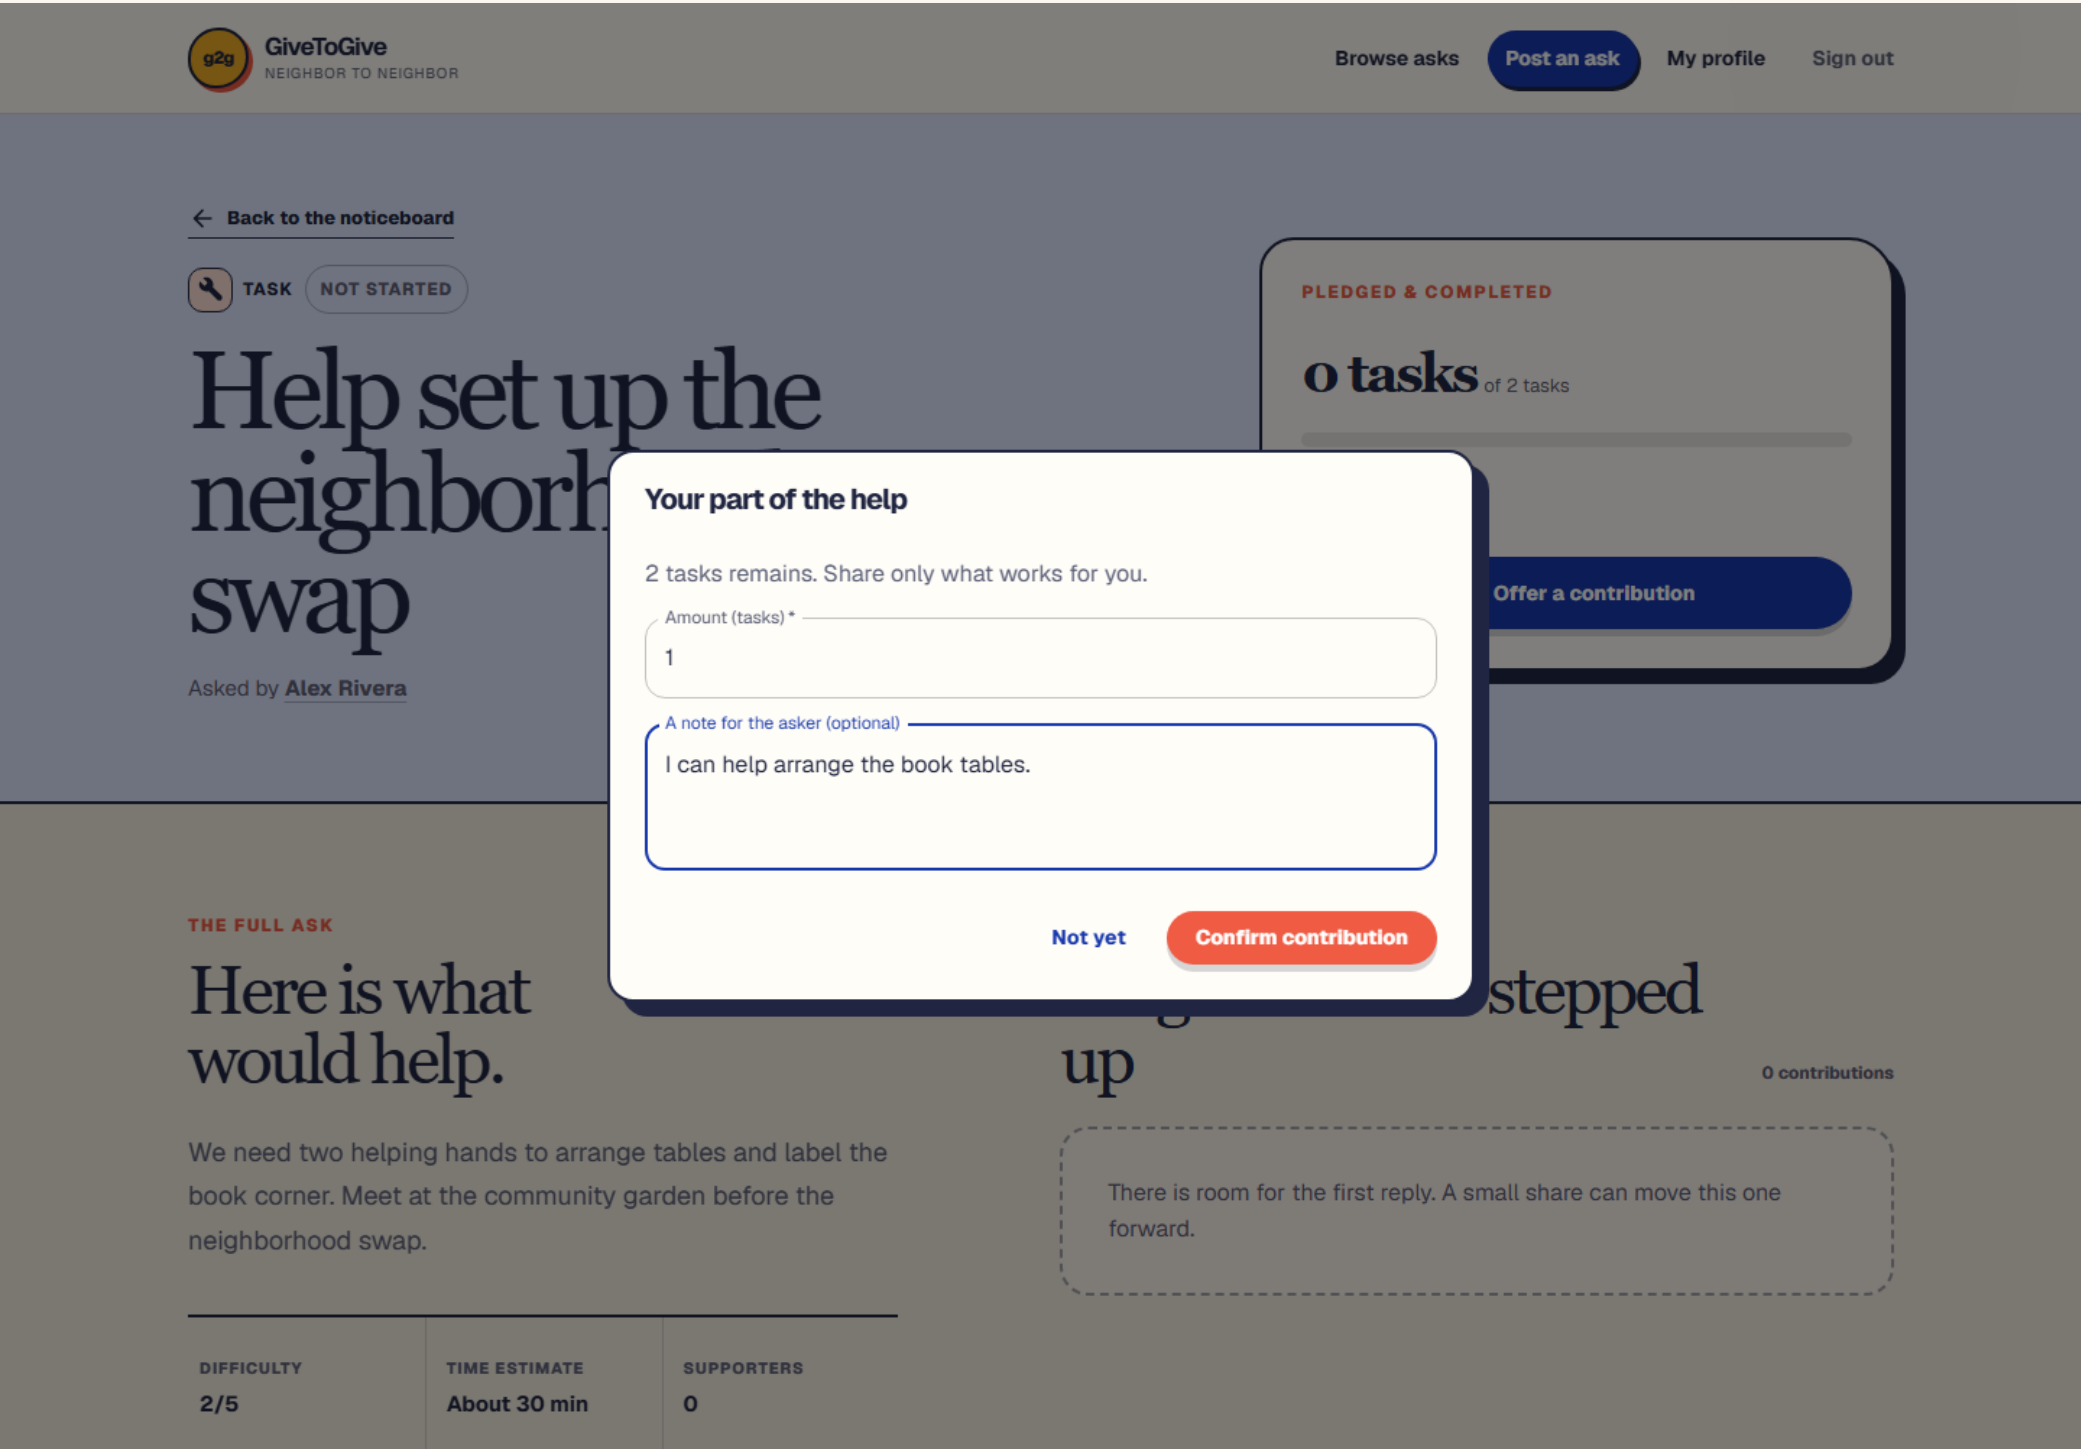

43 / Ask owner - updated details

Successful edits provide confirmation and add an activity-history entry.

[/asks/help-set-up-the-neighborhood-swap](#)

44 / Contribute - partial offer dialog

A neighbor can pledge only part of the goal and leave a helpful note.

/asks/help-set-up-the-neighborhood-swap

45 / Contribute - pending pledge

A pledge reserves capacity. Delivery must still be confirmed before it counts as completed help.

Capability appendix

A complete inventory of what the current release does, what was completed from the three spinoff tasks, and what is intentionally not implemented.

This inventory compares the integrated release with [main](#) at [1ecb2ee](#), the starting point for this release. It distinguishes working baseline features from unmerged work in the three referenced task worktrees. It describes application behavior, not a guarantee that every future need is implemented.

"Existed before" means before this integration pass, not necessarily before the broader revival. For example, the visual redesign was created earlier in the revival at [bb600ca](#), and typed contributions/runtime updates at [979a793](#).

Tags

existed before - working code was already on baseline [main](#).

partly implemented before - code existed in an unmerged task worktree, but was not a finished, integrated feature on baseline [main](#).

brand new - behavior or release coverage added during this integration.

newly finished - incomplete work integrated, corrected, and made ready for the release. The verification record is recorded separately below.

Public experience

Capability	Provenance	Current behavior
Colorful editorial design	existed before	Warm paper backgrounds, cobalt/coral accents, expressive typography, illustrations, responsive home, board, Ask detail, and authentication views.
Home and navigation	existed before	Introduces mutual aid and links to browsing, account access, and posting.
Home type shortcuts	brand new	Time, item, and money-pledge shortcuts open the corresponding board filter; copy distinguishes pledges from real payments.
Public Ask board	existed before	Latest 100 Asks, type, title, description, difficulty, estimated time, goal, status, and contribution progress.
Type browsing	partly implemented before / newly finished	Tabs for time, task, item, money, resource, and all types.
Combined filters	partly implemented before / newly finished	Keyword search over title/description, status, maximum difficulty, and maximum estimated minutes combine with type and saved filters.
Shareable filter state	partly implemented before / newly finished	Filters live in the URL and survive reload, links, Back, and Forward. Apply and Clear update both results and form values.
Arbitrary valid duration links	brand new	A link such as <code>?minutes=45</code> displays the correct selected value rather than silently looking unfiltered.
Loading, empty, and retry states	newly finished	Board loading, no results, no saves, signed-out saves, save failure, and query failure have explicit feedback and recovery.
Page recovery	brand new	Branded missing-page and runtime-error screens, plus member-specific missing/error states.

Accounts and access

Capability	Provenance	Current behavior
Email/password accounts	existed before	Register a name/email/password, verify the email, and sign in with email/password. There is no separate username-login system.
Discord sign-in	existed before	Auth.js OAuth entry point and account persistence. Completing OAuth still requires the member's Discord authorization.
Email verification	existed before	Expiring links and resend flow, including recovery guidance for an unverified sign-in.
Password reset	existed before	Generic reset request response and expiring token-based replacement password.
Authentication email	existed before	Gmail OAuth delivery, optional Resend fallback, and development-only preview links/test mode.
Password storage and throttling	existed before	Password hashing and database-backed account/address authentication attempt limits.
Single-use token races	brand new	Verification and reset consume a valid token atomically within the transaction, preventing concurrent successful reuse.
Callback protection	brand new	Sign-in callbacks accept safe local paths and reject external/protocol-relative/control-character destinations.
Branded sign-out and auth recovery	brand new	Sign-out confirmation and cancellation, actual session removal, signed-out state, and generic authentication error recovery use the site's visual language.
Production email safety	brand new	The test-email flag cannot suppress real delivery in production.
Protected actions	existed before / newly finished	Posting and contributing already required a session. Saving, profile editing, owner edits, and contribution transitions now enforce the corresponding member/owner permissions server-side.

Asks and contribution lifecycle

Capability	Provenance	Current behavior
Five Ask types	existed before	time, task, item, money, resource; positive goals measured in minutes, tasks, items, currency, or resource units.
Create-Ask modal	existed before	Title, description, type, goal, difficulty 1-5, estimated minutes, and currency for money Asks.
Stable collision-safe URLs	existed before / newly finished	Unique slugs avoid title collisions; numeric-ID links also work. Owner title edits now retain the original slug.
Multiple partial offers	existed before	More than one member can offer a partial amount toward an Ask. No self-contributions or over-goal contributions.
Goal precision	newly finished	Whole-number non-money units; monetary inputs have at most two decimal places and are stored as integer minor units.
Reserved versus delivered help	partly implemented before / newly finished	Pledged and completed amounts reserve the goal; only completed amounts count toward completion. A fully pledged Ask remains in progress until delivery is recorded.
Completion and cancellation	partly implemented before / newly finished	The contributor or owner can mark a pledge completed; only the contributor can cancel it. Both actions use confirmation dialogs. Cancellation releases capacity.
Terminal and idempotent transitions	brand new	Completed/cancelled records cannot switch terminal states. Repeating the same authorized action succeeds without duplicate activity.
Concurrency controls	newly finished	Writes lock the Ask consistently before updating contributions, preventing competing offers from overfilling capacity.
Owner edits	partly implemented before / newly finished	Update title, description, difficulty, time estimate, and goal. Cannot lower the goal below active offers. Raising the goal can reopen a completed Ask. Type and currency remain fixed.
Activity timeline	partly implemented before / newly finished	Ask creation/edits and contribution offer/completion/cancellation records, attributed to actors. Dates render consistently in UTC.
Contributor/owner profile links	newly finished	Ask detail connects people to public profiles rather than leaving names as dead ends.
Contribution notes	existed before / newly finished	Optional notes accompany offers; privacy is restricted to the Ask owner and the note's contributor. Public totals and participation remain visible.
Existing status reconciliation	brand new	Migration recalculates stored Ask statuses using completed rather than merely pledged amounts.

Money entries are **off-platform records**, not charges, transfers, receipts, escrow balances, or proof that a payment settled. “Completed” records what a member or owner marked; it is not independent verification.

Saved Asks and member profiles

Capability	Provenance	Current behavior
Private saved list	partly implemented before / newly finished	Signed-in members bookmark/unbookmark board cards and browse ?saved=1 , optionally combined with other filters.
Idempotent saves	newly finished	Composite member/Ask keys and conflict-safe writes prevent duplicate saves; removing an absent save is harmless.
Saved-list privacy	newly finished	Results are scoped to the current member. Guests see a sign-in prompt, not another member's data.
Public profiles	partly implemented before / newly finished	Name, optional bio/location, completed contribution history, completed count, and Asks-posted count.
Own-profile editing	partly implemented before / newly finished	Edit name, bio, and location; Cancel discards unsaved edits. The API can only update the signed-in member.
Private contribution history	newly finished	The profile owner sees their pledged/completed/cancelled offers. Other visitors see completed entries only. History excludes private notes and account credentials.
History pagination	brand new	Twenty records per page with navigation and total counts.
Lightweight trust context	partly implemented before / newly finished	“Email confirmed” explicitly does not imply identity verification. Joined month/year appears only when known; legacy accounts do not get an invented age.
Responsive profile access	newly finished	Authenticated navigation exposes My profile, including narrow layouts.

Profile privacy does not make participation anonymous: an Ask’s public detail and activity timeline still show contribution identities, amounts, and statuses. Location is a self-written profile field, not geolocation or geographic matching.

Route and view inventory

Path	Views and states
/	Public/authenticated home, type shortcuts, responsive header/footer.
/asks	All types, each type tab, combined filters, loading/error/empty results, signed-out posting prompt, create-Ask modal and its type-specific fields.
/asks?saved=1	Private saved board, empty saved board, filtered saves, and sign-in gate.
/asks/[slugOrId]	Public/member/owner detail; goal progress; contributor list; offer modal; owner edit modal; completion/cancellation confirmations; activity timeline; missing Ask.
/members	Redirect to own profile or sign-in.
/members/[id]	Public or own profile, edit modal, empty/populated/paginated history, missing member and error recovery.
/signin	Email/password form, Discord entry, incorrect/unverified sign-in recovery, callback return.
/signout	Confirmation, cancellation, and already-signed-out state.
/auth-error	Branded generic authentication recovery without provider internals.
/signup	Registration, validation, verification guidance.
/forgot-password	Reset request form and generic confirmation.
/reset-password	Token-based form, missing/invalid/expired link, completion.
/verify-email	Verify valid token, missing/invalid/expired token, resend form and confirmation.
/api/auth/[...nextauth]	Session, provider callbacks, CSRF/authentication and sign-out handlers.
/api/trpc/[trpc]	Typed Ask and user API operations, server-side validation/authorization.
Unknown paths	Branded not-found view and route recovery.

Architecture and operations

existed before: Next.js App Router and React, TypeScript, Material UI, custom CSS, tRPC with TanStack Query/SuperJSON, Auth.js JWT sessions and Drizzle adapter, PostgreSQL through Drizzle, Vercel hosting, Node 24 runtime.

newly finished: additive saved-Ask/activity/profile migration integrated with the existing migration sequence; contribution status reconciliation.

brand new: focused unit tests and combined browser/API coverage for ownership, privacy, terminal states, pledge/token races, callback safety, filters and history. Synthetic test records are scoped to exact generated member IDs for cleanup.

existed before: [.vscode/settings.json](#) was already removed from Git tracking and ignored at this release's starting baseline.

Resolved task boundaries

Referenced task	Integrated outcome
Contribution completion, cancellation, owner updates (01a0d11b-f0c4-7582-b1f3-a91d1a8f6f0c)	Lifecycle router/UI, activity schema, safe state rules and race coverage.
Member profiles, contribution history (01a0d11b-ef38-7940-b154-c73f3c93c1cc)	Profiles/editor, private versus public history, honest trust cues, pagination.
Filters, saved Asks, type browsing (01a0d11b-d95a-7580-a081-bb6abf3eff7f)	URL-driven board, all type tabs, private saves, clear/back synchronization and query recovery.

Original task worktrees are preserved; no unrelated local edits are discarded. The release report records final production verification and archive readiness.

Intentional limits / next work

Not implemented: Stripe Checkout/Connect or other payment processing, recurring supporter subscriptions, pooled community funds, financial payout/refund workflows, private messaging, notification subscriptions, geographic discovery, attachments, moderation/reporting tools, ratings, identity checks, Ask deletion or archival, and a full searchable member directory.

The board currently shows at most the latest 100 matching Asks, not an infinite directory. Owner edits cannot change an Ask's type/currency once created. Session revocation across already-signed-in devices and broader anti-abuse controls remain separate security work. No automated browser test substitutes for an end-to-end member-authorized Discord OAuth flow or real email-delivery monitoring.

Verification record

Check	Verified result
Unit tests	16 passed
Local browser tests	16 passed, including signup, email verification and password reset via development preview links
Production browser/API regression	12 passed; development email-preview tests intentionally skipped
Production walkthrough	62 desktop/mobile views and dialog states, zero unexpected browser/network errors, synthetic records cleaned up
Build / TypeScript / ESLint	Passed
Dependency audit	0 vulnerabilities reported
Database	11 migrations applied; seed rerun without duplicates; no self-contributions, overfilled goals or stale statuses

See [docs/release-report.md](#) for deployment identity, archive readiness, cleanup details, and honest validation limits. The PDF captures the application release; subsequent documentation-only commits do not change its UI.
